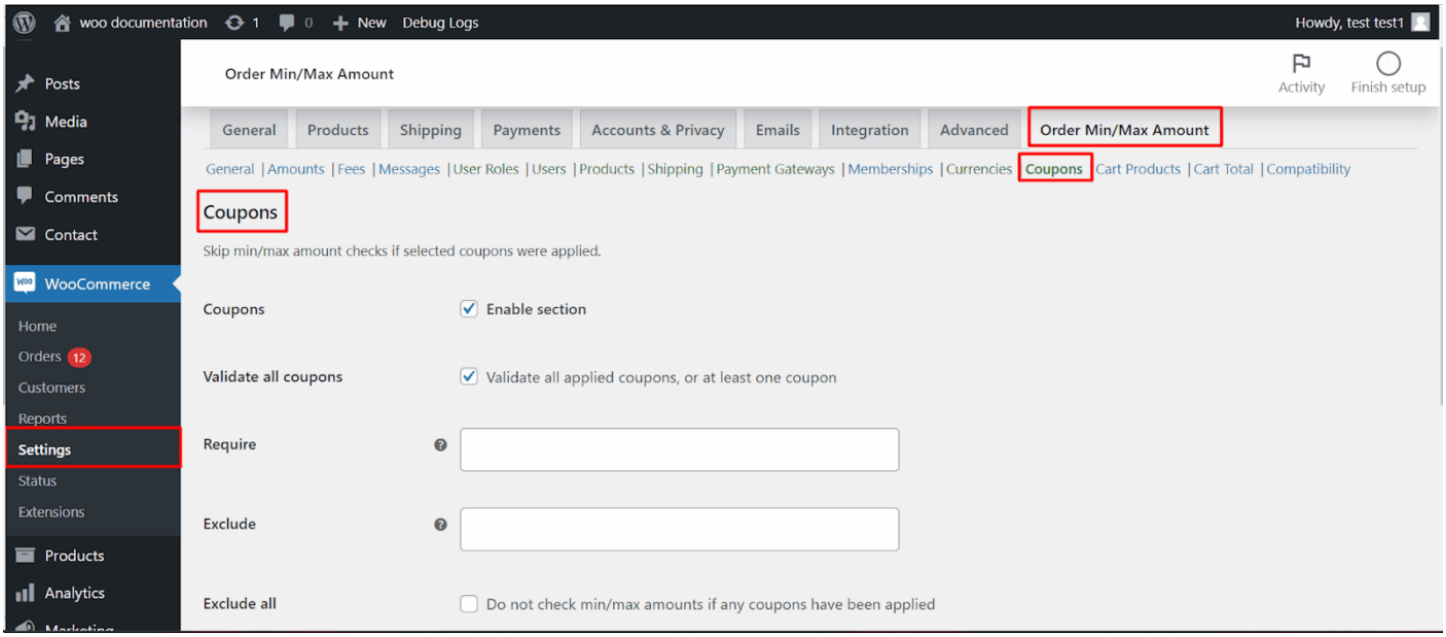
Applying or Skipping Order Limits with Coupons

How to · https://wpfactory.com/docs/coupon-quantity-bypass/

To skip or apply WooCommerce order minimums and maximums based on coupons, use Order Minimum/Maximum Amount Limits for WooCommerce Pro. Go to **WPFactory > Order Min/Max > Coupons**, tick **Coupons**, then choose coupons that skip the limits (**Exclude**), coupons that trigger them (**Require**), or skip them for any coupon.



Before you start

- WooCommerce, active, with coupons enabled.
- Order Minimum/Maximum Amount Limits for WooCommerce Pro: the **Coupons** section is a Pro feature.

Step-by-step

1. Go to **WPFactory > Order Min/Max** (also reachable at **WooCommerce > Settings > Order Min/Max Amount**) and open the **Coupons** sub-tab.
2. Tick **Coupons** (`alg_wc_oma_coupons_enabled`) to enable the section.
3. Pick coupons in **Require** or **Exclude** (the lists show every coupon in your store by title and ID), or tick **Exclude all**.
4. Set **Validate all coupons** for how several applied coupons are judged, then click **Save changes**.

Options in this section

Label	Option ID	Default	What it does
Coupons (enable section)	`alg_wc_oma_coupons_enabled`	No	Turns coupon-based rules on.
Validate all coupons	`alg_wc_oma_coupons_validate_all`	Yes	Match all applied coupons, or at least one.
Require	`alg_wc_oma_coupons_include`	(none)	Enforce limits only when these coupons are applied. Orders with no coupon skip the limits.
Exclude	`alg_wc_oma_coupons_exclude`	(none)	Skip limits when these coupons are applied.
Exclude all	`alg_wc_oma_coupons_exclude_all`	No	Skip limits whenever any coupon is applied. Ignored when Require or Exclude has coupons.

How the coupon rules decide

Order Min/Max Amount checks the coupons in the cart each time it validates a limit, for every amount type (sum, quantity, weight and the rest). When the coupon rules say "skip", the limit counts as met, so the customer sees no min/max message and can check out.

Your setup	Cart	Result
Exclude: VIP	VIP applied	Limits skipped
Exclude: VIP	No coupon, or another coupon	Limits enforced
Require: BULK	BULK applied	Limits enforced
Require: BULK	No coupon, or another coupon	Limits skipped
Exclude all (Require and Exclude empty)	Any coupon applied	Limits skipped

With several coupons in the cart, **Validate all coupons** (default on) skips the limits as soon as one coupon is outside Require or inside Exclude. Turned off, the limits stay enforced if at least one applied coupon qualifies.

Common uses

- **VIP or staff codes:** put the code in Exclude so its holders can order any amount.
- **Promo with a minimum:** put a discount code in Require so the minimum applies only to orders that use that discount.
- **No limits on discounted orders:** tick Exclude all and leave both lists empty.

If it does not work

- The **Coupons** checkbox is off or you are on the free version, where the section is disabled.
- **Exclude all** is ticked but Require or Exclude still has coupons. The lists take over and Exclude all is ignored.
- The cart is empty or the coupon was removed. Coupon rules only run on a cart that has items.
- Another rule also applies, for example a Cart Products rule. Any rule that skips the check lets the order through.

FAQ

Is this the same as the coupon's own minimum and maximum spend?

No. WooCommerce's coupon **Minimum spend** and **Maximum spend** fields decide whether a coupon can be used. The Coupons section here works the other way round: it decides whether your store-wide order limits apply when a coupon is used.

Do I type the coupon codes?

No. Require and Exclude are search lists of the coupons that exist in your store, shown by title and ID. Create the coupon in WooCommerce first.

Does this work with per-role or per-product limits?

Yes. The coupon rules apply to every limit check, whether the limit comes from the General settings, a user role, a product or another section.
