Advanced Settings: Form Method, Scopes, Cookies and Sessions

How to · https://wpfactory.com/docs/advance-options-2/

Advanced settings for the products per page selector

The Advanced section of the Number of Products per Page - Pagination Manager for WooCommerce plugin controls how the selection is submitted, where the selector is allowed to appear, and how a shopper's choice is remembered. Every option in this section is free.

Go to **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**), then open the **Advanced** section.

Advanced options reference

Label	Option ID	Type	Default

Form method	`alg_wc_products_per_page_form_method`	select	POST
Apply in WooCommerce shortcodes	`alg_wc_products_per_page_wc_shortcode`	checkbox	yes
Scopes: Require	`alg_wc_products_per_page_scopes[require]`	multiselect	(empty)
Scopes: Exclude	`alg_wc_products_per_page_scopes[exclude]`	multiselect	(empty)
Save in cookie (Enable)	`alg_wc_products_per_page_cookie_enabled`	checkbox	yes
Cookie expiration time	`alg_wc_products_per_page_cookie_sec`	number (seconds)	1209600 (14 days)
Save in session (Enable)	`alg_wc_products_per_page_session_enabled`	checkbox	yes
Force session start	`alg_wc_products_per_page_session_force_start`	checkbox	yes
Custom CSS	`alg_wc_products_per_page_custom_css`	textarea	(empty)

Form method

- **POST** (default): the selected value is sent as form data and does not change the URL.
- **GET**: the value is appended to the URL as the `alg_wc_products_per_page` parameter, for example `https://example.com/?alg_wc_products_per_page=25`. This makes a specific view bookmarkable and shareable.

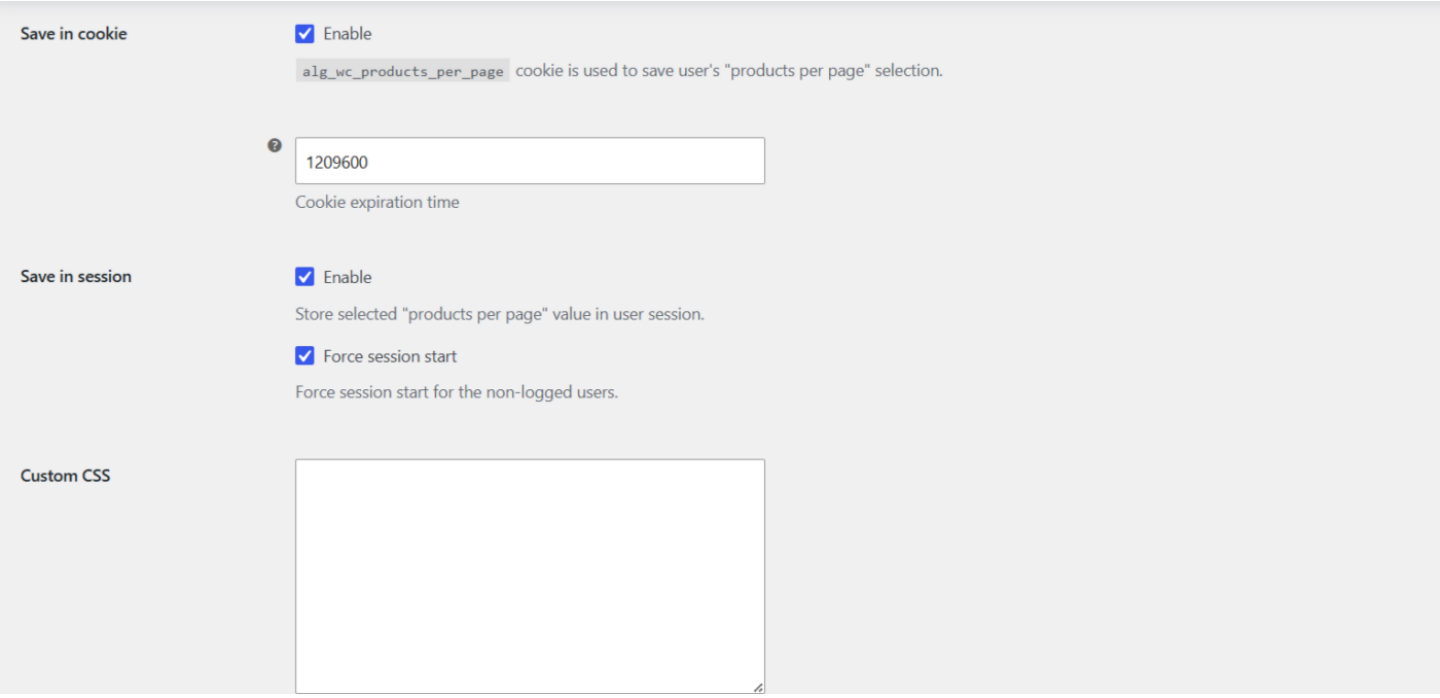

Apply in WooCommerce shortcodes

When enabled, the per-page value is also applied to WooCommerce's `[products]` shortcode results. This is on by default.

Scopes

Scopes limit where the selector and per-page value apply, using WordPress conditional tags. Leave both lists empty to apply everywhere.

- **Require:** apply only on the selected page types. Available types: Product category, Product tag, Product taxonomy, Shop, Archive, Home, Front page, Single, Singular.
- **Exclude:** never apply on the selected page types, even if they also match Require.

Save in cookie and Save in session

Both storage methods are enabled by default, so a shopper's choice is remembered as they browse.

- **Save in cookie:** stores the choice in the `alg_wc_products_per_page` cookie. Set the **Cookie expiration time** in seconds (default 1209600, which is 14 days).
- **Save in session:** stores the choice in the WooCommerce session. **Force session start** starts a session for non-logged-in users, which helps when session storage does not persist otherwise.

Custom CSS

Add CSS here to style the selector to match your theme. It is printed in the page head on the front end.

Reset section settings

The **Reset section settings** checkbox at the bottom of the section restores the Advanced options to their defaults when you check it and save.

PRODUCTS PER PAGE

These advanced controls are free. Number of Products per Page - Pagination Manager for WooCommerce Pro adds an editable list of per-page options and a Products per Page widget.
