Default Quantity Not Pre-Filling on Product Pages

Troubleshooting · https://wpfactory.com/docs/default-quantity-issue/

Default quantity is not pre-filling

If the quantity field still loads as 1 in the Min Max Step Quantity Limits Manager for WooCommerce, you need two settings at WPFactory > Quantity Manager. In Default Quantity, tick Default quantity and set All products above 0. In General, set Initial Quantity Options > Single product page to Default quantity, then save.

Fix

1. Go to **WPFactory > Quantity Manager** (also **WooCommerce > Settings > Product Quantity**).
2. Open the **Default Quantity** section, tick **Default quantity**, and set **All products** to a value above 0.
3. Open the **General** section and set **Initial Quantity Options > Single product page** to **Default quantity**. (Use **Archive pages** for shop and category pages.)
4. Save changes and clear any page cache.

> **Note:** if a minimum quantity is higher than your default, the field loads at the minimum instead.
