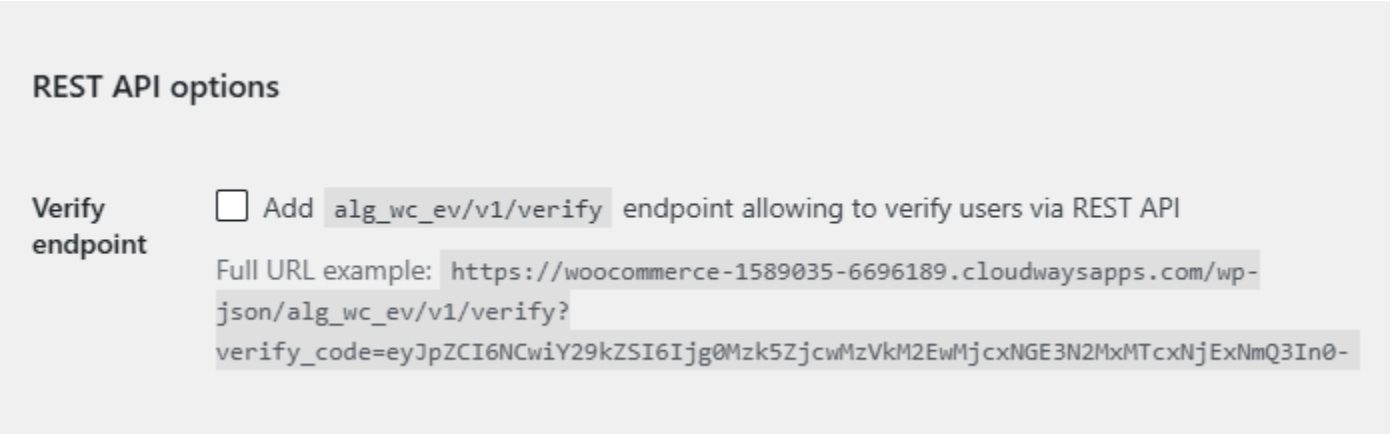
How to Verify Users via the REST API

How to · https://wpfactory.com/docs/email-verification-rest-api-verify-endpoint/

To verify users through the REST API, go to WPFactory > Email Verification (also reachable at WooCommerce > Settings > Email Verification), open the Advanced sub-tab, and tick Verify endpoint. Then send a GET request to /wp-json/alg_wc_ev/v1/verify with the verify_code parameter. This is a Pro feature of Customer Email Verification for WooCommerce.



Before you start

- WooCommerce, active.
- Customer Email Verification for WooCommerce Pro.
- A verification code for the account you want to verify. This is the same `verify_code` the plugin puts in its activation links.

Turn on the endpoint

1. Go to **WPFactory > Email Verification** (also reachable at **WooCommerce > Settings > Email Verification**) and open the **Advanced** sub-tab.
2. In the **REST API options** group, tick **Verify endpoint** (option `alg_wc_ev_rest_api_verify_endpoint`).
3. Click **Save changes**.

Call the endpoint

The endpoint is registered under the `alg_wc_ev/v1` namespace and accepts a GET request:

```
GET https://your-store.com/wp-json/alg_wc_ev/v1/verify?verify_code=THE_CODE
```

Detail	Value
Method	GET
Route	`/wp-json/alg_wc_ev/v1/verify`
Required parameter	`verify_code`

Responses

- **200**: `{ "message": "Account verified successfully." }`
- **400** (`no_verify_code`): the `verify_code` parameter was missing or empty.
- **500** (`error`): verification failed, for example the code was invalid or already used.

> **Note:** the endpoint is public (no authentication) because the `verify_code` itself is the secret. Treat the code like a one-time token and send it over HTTPS.

CUSTOMER EMAIL VERIFICATION FOR WOOCOMMERCE

The REST API endpoint is a Pro feature of Email Verification. If you are still on the free version, upgrading unlocks it along with the rest of the Pro toolkit.
