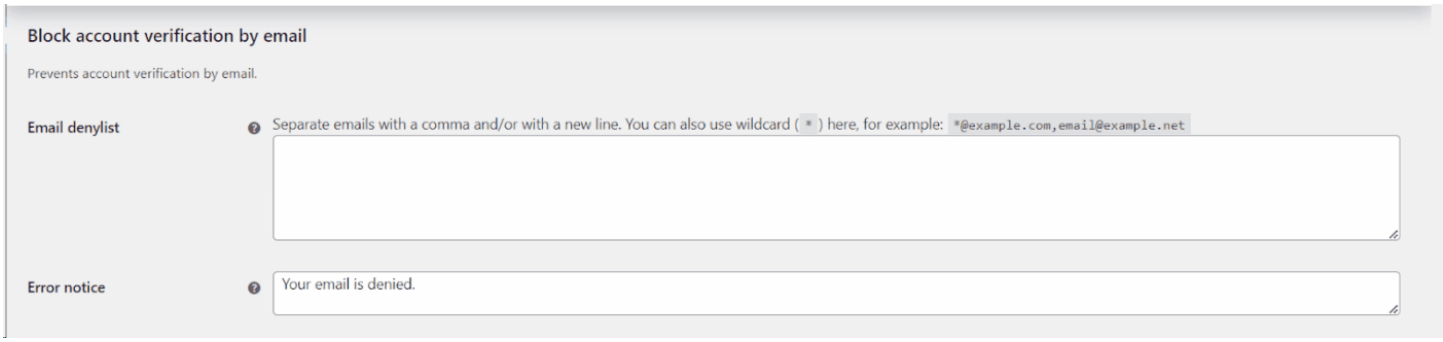
Block Email Verification for Specific Addresses or Domains

How to · https://wpfactory.com/docs/exclude-specific-users/

To stop chosen email addresses or whole domains from verifying an account, use the email denylist (a Pro feature) in Customer Email Verification for WooCommerce. It is handy for shutting out disposable-email services and cutting down on throwaway registrations.



Where to find it

Go to **WPFactory > Email Verification** (also reachable at **WooCommerce > Settings > Email Verification**) and open the **Blocking** sub-tab. Scroll to the **Block account verification by email** section.

> **Note:** this option lives on the **Blocking** sub-tab, not the General sub-tab. To exempt whole user roles from verification instead, use **Ignore user roles** on the General sub-tab.

Options reference

Label	Option ID	Default
Email denylist	`alg_wc_ev_email_blacklist`	Empty
Error notice	`alg_wc_ev_blacklisted_message`	Your email is denied.

How to fill the denylist

- Separate entries with a comma, a new line, or both.
- Use the `*` wildcard to match a whole domain, for example `*@example.com`.
- Mix single addresses and wildcards freely, for example `*@example.com,spammer@example.net`.
- Leave the field empty to turn the denylist off.

Step-by-step

1. Open the **Blocking** sub-tab and find **Block account verification by email**.
2. Enter the addresses or domains in **Email denylist**.
3. Edit the **Error notice** shown to a blocked visitor when they click their activation link.
4. Click **Save changes**.

CUSTOMER EMAIL VERIFICATION FOR WOOCOMMERCE

The email denylist is a Pro feature. Customer Email Verification for WooCommerce Pro also adds guest checkout verification, non-paying-user rules and scheduled cleanup of unverified accounts.
