AI Product Image Generator Settings Reference

References · https://wpfactory.com/docs/ai-product-images-settings/

This is the settings reference for AI Product Image Generator for WooCommerce. All plugin-wide options are at **AI Images > Settings**, on four tabs: **Connection**, **Credits**, **Advanced** and **Notifications**. Each tab has its own save button. Style options (prompt, variants, watermark) are covered in the custom styles guide.

Connection tab

Setting	Stored in	Default	What it does
Connection Mode: Managed Credits or Use My API Key	`aipig_settings` (`api_mode` : `managed` or `own_api`)	Managed Credits	Chooses where generation requests are sent: WPFactory's service or Google's Gemini API.

Setting	Stored in	Default	What it does
License Key (Managed Credits)	`aipig_license_data`	Empty	Your license key. **Verify License** checks it with the service for this domain and shows **License Active** on success. **Register New Account** opens a sign-up form.
Google Gemini API Key (Use My API Key)	`aipig_settings` (`api_key`)	Empty	Your key from Google AI Studio. **Test Connection** checks it with Google.

Click **Save Connection Settings**. Guide: How to Connect Your Gemini API Key or Managed Credits.

Credits tab

With **Use My API Key**, this tab only shows *Own API Mode Active*, because Google bills you directly. With **Managed Credits** it shows:

Item	What it shows or does
Available Credits	Your balance as last reported by the service (stored in `aipig_credits_balance`). It cannot be edited here.
Credits Per Image	The cost the service charges for each generated image (stored in `aipig_cost_per_image`). Set by the service.
Sync Credits	Fetches the current balance from the service now.
Open Dashboard	Opens WPFactory's account dashboard, where you log in with your registered email address and license key to view usage and buy credits.

The **AI Images > Dashboard** page shows a *Low Credits Warning* when fewer than 20 credits remain.

Advanced tab

Setting	Stored in	Default	What it does
Image Naming Pattern	`aipig_image_naming_pattern`	`{product-name}-{number}`	File name for generated images. Tags: `{product-name}`, `{product-id}`, `{style}`, `{number}`, `{date}`, `{time}`. Characters other than letters, digits, hyphens and underscores become hyphens, and a counter is added when a file with the same name already exists.
Re-run Setup Wizard	Button	None	Opens the setup wizard again from the first step. Existing data and settings are kept.
AI Model: Current Model	`aipig_settings` (`ai_model`)	`gemini-2.5-flash-image`	Read-only. Shows the model used for image generation.
Remove all plugin data on uninstall	`aipig_remove_on_uninstall`	Off	When ticked (two confirmations), deleting the plugin removes its database tables (styles, prompts, generated image records, activity log, transactions), its options and its post meta. Generated images already in your Media Library are standard attachments and stay there.
Clear Generation History	Button	None	Permanently empties the generation log table after a confirmation. Images and styles are not affected.

Click **Save Advanced Settings** to store the naming pattern and the uninstall option.

Notifications tab

Setting	Default	Notes
Enable email notifications	Off	Saved with the other notification settings.
Email Address	Site admin email	Where notification emails should go.
Summary Email	No summary	No summary, Daily summary or Weekly summary.
Notification Types	All ticked	Generation Complete, Generation Failed, Bulk Generation Complete, Low Credits Warning, Out of Credits.
Use custom SMTP settings	Off	Reveals SMTP Host, SMTP Port (587), Encryption (None, SSL, TLS; default TLS), Authentication (Yes), SMTP Username, SMTP Password, From Email and From Name, plus **Test SMTP Connection**.

Click **Save Notification Settings**. **Test Notification** adds a test entry to the in-admin notification list.

> **Note for version 1.0.1:** the email options are stored, but this version does not send notification or summary emails yet. Notifications are recorded on **AI Images > History** instead. Also leave **Use custom SMTP settings** unticked: saving with it ticked can end in a critical error page in this version.

Other screens

- **AI Images > Styles:** style fields are listed in How to Create Custom AI Image Styles for WooCommerce; watermark fields in How to Watermark AI Product Images in WooCommerce.
- **AI Images > Generate Images:** filters, **Image generated from** and **Style**, see How to Bulk Generate AI Images for WooCommerce Products.

- **AI Images > History:** the last 50 notifications, such as failed generations and bulk run summaries, with **Mark All as Read** and **Clear All**.
- **Product edit screen, AI Image Generator box: Select Style**, **Image Source** and **Generate AI Image**, see How to Generate WooCommerce Product Images with AI.

Access

Settings, Styles and History require administrator access (`manage_options`). The Dashboard, Generate Images page and the product box require the `edit_products` capability, which shop managers have.
