Free Shipping Shortcodes and Widget in WooCommerce

Shortcodes · https://wpfactory.com/docs/free-shipping-progress/

The Free Shipping Bar: Amount Left for Free Shipping for WooCommerce can show the amount left for free shipping anywhere on your store using a shortcode, a widget, or a PHP function. This reference lists the real shortcodes the plugin registers and how to use them.

All three shortcodes below ship in the free version.

[alg_wc_left_to_free_shipping]

Outputs the amount left for free shipping message. This is the main shortcode. Place it on any page, in a text widget, or inside another shortcode.

Attribute	Default	Description
`content`	(empty, falls back to the default message)	The message text. Accepts HTML and the plugin placeholders such as `%amount_left_for_free_shipping%`.
`template`	`{content}`	Wrapper markup around the content. Use `{content}` where the message should appear.
`multiply_by`	1	Multiplies the calculated amounts, for example to show a rounded or per-unit figure.
`min_free_shipping_amount`	0	Override the free shipping threshold. When 0, the plugin works it out automatically.
`free_delivery_text`	false	Text shown once free shipping is reached. When false, the General "Free shipping reached" message is used.

Attribute	Default	Description
`min_cart_amount`	the General "By cart amount" value	Hide the message until the cart total is above this value.

Example:

```
[alg_wc_left_to_free_shipping content="%amount_left_for_free_shipping% left for free shipping"]
```

To show a progress bar inside the message, enable it first under the Progress Bar section, then add the `%progress_bar%` placeholder to the `content`. There is no `progress_bar` shortcode attribute.

[alg_wc_left_to_free_shipping_translate]

Shows different text depending on the active language (works with WPML and Polylang through the `ICL_LANGUAGE_CODE` constant).

Attribute	Description
`lang`	One or more language codes (comma separated) the content applies to.
`not_lang`	Language codes the content should not apply to.
`lang_text`	Text shown when the language matches `lang` (attribute form).
`not_lang_text`	Text shown otherwise (attribute form).

Attribute form:

```
[alg_wc_left_to_free_shipping_translate lang="de" lang_text="%amount_left_for_free_shipping% fur kostenlosen Versand" not_lang_text="%amount_left_for_free_shipping% left for free shipping"]
```

Wrapped form (put the shortcode around each language block):

```
[alg_wc_left_to_free_shipping_translate lang="de"]%amount_left_for_free_shipping% fur kostenlosen Versand[/alg_wc_left_to_free_shipping_translate]
```

Note: `[alg_get_left_to_free_shipping]` still works as a deprecated alias of the main shortcode. Use `[alg_wc_left_to_free_shipping]` in new content.

Widget and PHP function

The plugin also registers an **Amount Left for Free Shipping** widget (Appearance > Widgets), with a Title and a Content field that accepts the same placeholders. Developers can output the message directly in a template:

```
echo alg_wc_get_left_to_free_shipping( array( 'content' => '%amount_left_for_free_shipping% left for free shipping' ) );
```

Placeholders

The message content accepts these placeholders: `%amount_left_for_free_shipping%`, `%free_shipping_min_amount%`, `%current_cart_total%`, their raw (unformatted) variants `%amount_left_for_free_shipping_raw%`, `%free_shipping_min_amount_raw%`, `%current_cart_total_raw%`, and `%progress_bar%`.

AMOUNT LEFT FOR FREE SHIPPING

The shortcodes and widget are free. Amount Left for Free Shipping Pro adds AJAX updates, per-category and per-user-role hiding, and extra display sections.
