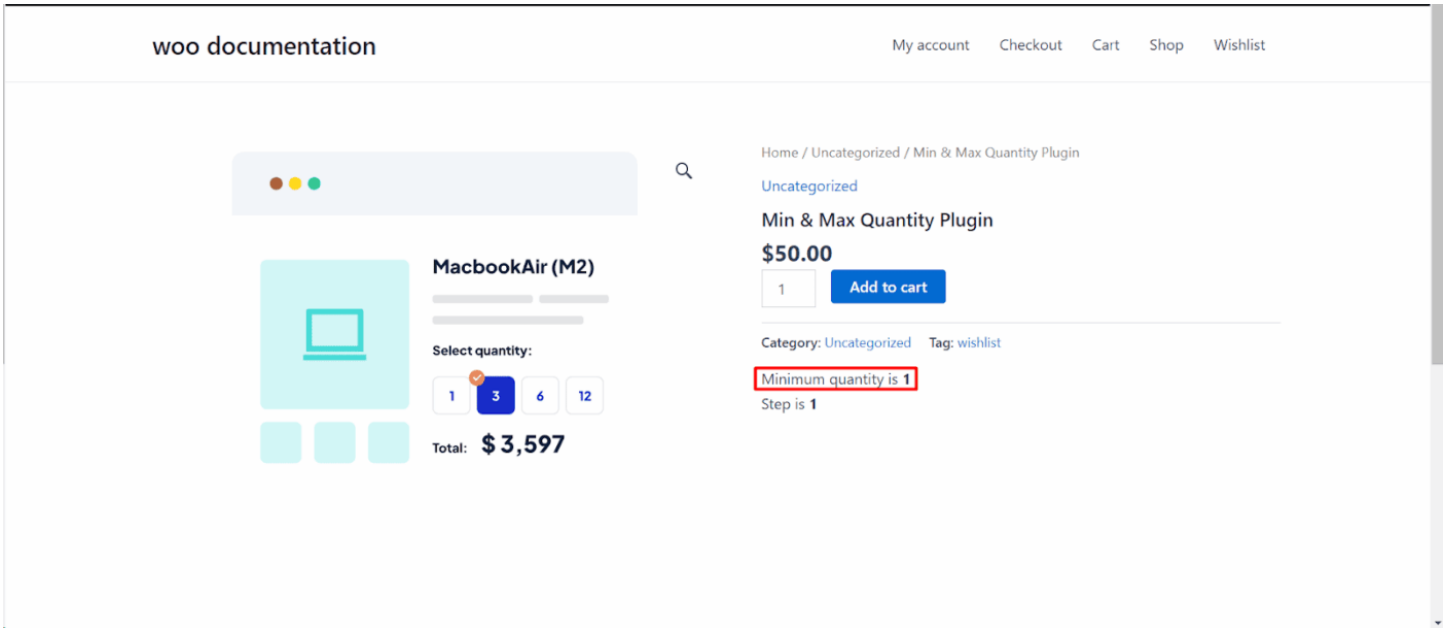
How to Display Quantity Information on Product and Shop Pages

How to · https://wpfactory.com/docs/minimum-quantity-display/

To display quantity rules such as "Minimum quantity is 2" on WooCommerce product and shop pages, open **WPFactory > Quantity Manager > Quantity Info** in Min Max Step Quantity Limits Manager for WooCommerce and tick **Single product page**, **Archives**, or both. The text uses shortcodes, so it always matches your current rules. This feature is free.



Step by step

1. Go to **WPFactory > Quantity Manager** (also reachable at **WooCommerce > Settings > Product Quantity**).
2. Open the **Quantity Info** section.
3. Tick **Single product page** (and/or **Archives**) to enable the info block where you want it.
4. Edit the content box below each toggle. You can use HTML and the shortcodes listed below.
5. Click **Save changes**.

Single product page custom hook	`wpfmmsq_qty_info_on_single_product_custom_hook`	No	Free

Available shortcodes

Shortcode	Shows
`[wpfmmsq_min_product_qty]`	The product's minimum quantity
`[wpfmmsq_max_product_qty]`	The product's maximum quantity
`[wpfmmsq_product_qty_step]`	The product's quantity step
`[wpfmmsq_product_qty_price_unit]`	The product's price unit text

Each shortcode accepts `before` and `after` attributes for wrapping text, for example:

```
[wpfmmsq_min_product_qty before="Minimum quantity is <strong>" after="</strong>"]
```

A shortcode prints nothing, including its `before` and `after` text, when it has no value. That is how the maximum line disappears for products with no maximum. The minimum and step fall back to WooCommerce's value of 1, so those lines always show; remove them from the box if you only want to show real rules.

> **Note:** the older `[alg_wc_pq_*]` tags still work as aliases but are deprecated since v5.3.1. Use the `wpfmmsq_*` tags above. The default content box still contains `[alg_wc_pq_product_qty_price_unit]`; replace it with `[wpfmmsq_product_qty_price_unit]`.

What the customer sees

- **Product page:** the text appears in the product summary, just below the add to cart area.
- **Shop and category pages:** the text appears under each product, after the add to cart button.
- **Variable products:** if variations have different rules, the value shows as a range from the lowest to the highest.

Common variations

- **Hide the info for some categories:** tick **Enable per category** and pick the categories in **Exclude product categories**.
- **Move it on the product page:** tick **Single product page custom hook** and enter a WooCommerce hook name and priority. Wrong hooks can break the page, so test on staging.
- **Show it inside the description:** the shortcodes also work in the product description, since the current product is known there.

If it does not work

- **It says "Minimum quantity is 1" although you set a higher minimum:** the **Minimum quantity** section is not enabled, or no value applies to this product. On the product page, the value also drops by the quantity already in the cart.
- **The maximum line is missing:** no maximum applies to this product, so the line is skipped.
- **Missing on some products:** the product's category is in the exclude list, or the plugin is disabled for that page with **Advanced > Disable plugin by URL** (Pro).

FAQ

Is Quantity Info free?

Yes. Every option in the Quantity Info section, including the category exclusions and the custom hook, is in the free version.

Can I use the shortcodes outside the product page?

Only where WooCommerce knows the current product, such as the product description or product templates. On a regular page they print nothing. See Quantity Manager shortcodes.

Can I translate the info text?

Yes, wrap each language version in `[wpfmmsq_translate]`. See How to show quantity messages in multiple languages.
