Quantity Manager Shortcodes

Shortcodes · https://wpfactory.com/docs/minmax-default-quantity/

Min Max Step Quantity Limits Manager for WooCommerce has five shortcodes: four print the current product's minimum, maximum, step or price unit, and `[wpfmmsq_translate]` shows text per language. Use them in product descriptions, templates or **WPFactory > Quantity Manager > Quantity Info**. All five are free.

Available shortcodes

Shortcode	Outputs
`[wpfmmsq_min_product_qty]`	The current product's minimum quantity.
`[wpfmmsq_max_product_qty]`	The current product's maximum quantity.
`[wpfmmsq_product_qty_step]`	The current product's quantity step.
`[wpfmmsq_product_qty_price_unit]`	The current product's price unit text (for example "per KG").
`[wpfmmsq_translate]`	Language-specific text for WPML or Polylang stores.

Attributes

The quantity shortcodes accept these attributes:

Attribute	Effect
`before`	Text or HTML printed before the value (only if a value exists).
`after`	Text or HTML printed after the value.
`thousand_sep="yes"`	Formats large numbers with a thousands separator (1,000 instead of 1000).

Attribute	Effect
`unit="yes"`	Appends the unit label from the Total Price by Quantity section (singular or plural, for example "pc" or "pcs"). Prints nothing if no unit label is set.
`price_unit="yes"`	Appends the text from the Price Unit section (for example "per KG"). Prints nothing if no price unit is set.

Example:

```
[wpfmmsq_min_product_qty before="Minimum: " after=" units" thousand_sep="yes"]
```

How the values are worked out

- **Current product only:** the shortcodes read the product WooCommerce is showing. On a normal page or post with no product, they print nothing.
- **Same rules as the quantity box:** the value comes from the product, category, attribute or all-products setting that applies, in that order.
- **Empty values:** when there is no maximum, `[wpfmmsq_max_product_qty]` prints nothing, including its `before` and `after` text. The minimum and step fall back to 1.
- **Variable products:** if the parent has no value of its own, the shortcode shows the range across variations, lowest to highest.

Translation shortcode

`[wpfmmsq_translate]` shows text only for the languages you name. Use `lang` to target languages and `not_lang` as a fallback:

```
[wpfmmsq_translate lang="EN"]Minimum quantity is %min_per_item_quantity%.[/wpfmmsq_translate]
```

There is also a one-line form with `lang_text` and `not_lang_text`:

```
[wpfmmsq_translate lang="DE" lang_text="Mindestmenge erreicht" not_lang_text="Minimum reached"]
```

See How to show quantity messages in multiple languages for full examples.

> **Note:** the older `[alg_wc_pq_*]` shortcodes (for example `[alg_wc_pq_min_product_qty]`) still work as aliases but are deprecated since v5.3.1. There is no standalone `[thousand_sep]` shortcode; it is an attribute of the quantity shortcodes shown above.

If it does not work

- **The shortcode prints nothing:** it is on a page without a current product, or the value is empty (for example no maximum).
- **The minimum shows 1:** the Minimum Quantity section is off, or no minimum applies to this product.
- **unit or price_unit hides the whole line:** the matching unit text is not set, so the shortcode returns nothing.

FAQ

Can I show the maximum order quantity on the product page?

Yes. Add `[wpfmmsq_max_product_qty before="Maximum: "]` to the product description, or enable Quantity Info, which places these shortcodes on product and shop pages for you.

Are the shortcodes free?

Yes. All five shortcodes are in the free version.

Can I pass a product ID?

QUANTITY MANAGER

See every feature and the pricing on the Quantity Manager plugin page.

View plugin →

No. The shortcodes have no product ID attribute and always use the current product.
