Build a Bulk Pricing Products List with a Shortcode

Shortcodes · https://wpfactory.com/docs/bulk-pricing-products-list-shortcode/

The products-list shortcode outputs a table of products with columns you choose, including price-by-quantity levels, so you can publish a wholesale price list on any page. This is a Pro shortcode in Price by Quantity & Bulk Quantity Discounts for WooCommerce. This article also covers the language shortcode.

`[alg_wc_ppq_products_list]`

Renders a product table. Long-form alias: `[alg_wc_wholesale_pricing_products_list]`. Both names behave the same.

Attribute	Description	Default
`columns`	Pipe-separated column definitions, each as `value:Title`. See the column values below.	`sku:SKU|name:Name|category:Category|price_with_add_to_cart_link:Price %level_min_qty% pcs.`
`levels`	Manual levels as `qty:discount` pairs joined by `|`, used to build the level columns when no category is given.	`false`

Attribute	Description	Default
`category_slug`	Limit the list to one product category and read its per-category levels.	`false`
`discount_type`	Force a discount type (`percent` , `fixed` or `price_directly`) for the level columns.	`false`
`limit`	Maximum products to list. `-1` means no limit.	`-1`
`orderby`	Product ordering field passed to WooCommerce.	`date`
`order`	`ASC` or `DESC` .	`DESC`
`image_size`	Image size for image columns.	`woocommerce_thumbnail`
`use_transients`	Cache the rendered table for 10 minutes. `yes` or `no` .	`no`

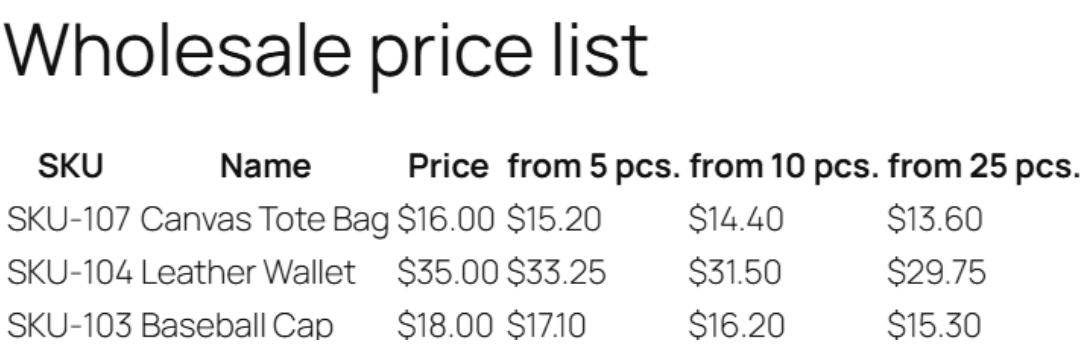

Column values

Each entry in `columns` starts with one of these values, followed by `:` and the heading text:

- `sku` , `name` , `category` , `price` , `image` : the basic product fields.

- `price_excl_tax`, `price_incl_tax`: price with or without tax.
- `levels`: one column per pricing level, showing the discounted per-unit price.
- Any of the above with the `_with_add_to_cart_link` suffix (for example `name_with_add_to_cart_link`) wraps the cell in an add-to-cart link. Use `image_with_product_link` to link the image to the product page instead.
- `meta:<meta_key>:Title`: output a product meta value, for example `meta:total_sales:Total sales`.

Example: `[alg_wc_ppq_products_list columns="sku:SKU|name:Name|price:Price|levels:from %level_min_qty% pcs." category_slug="bulk-supplies"]`

Wholesale price list

SKU	Name	Price	from 5 pcs.	from 10 pcs.	from 25 pcs.
SKU-107	Canvas Tote Bag	$16.00	$15.20	$14.40	$13.60
SKU-104	Leather Wallet	$35.00	$33.25	$31.50	$29.75
SKU-103	Baseball Cap	$18.00	$17.10	$16.20	$15.30

`[alg_wc_ppq_translate]`

Shows or hides text based on the active WPML language, useful inside pricing tables and labels. It works two ways:

- With attributes only: `[alg_wc_ppq_translate lang="EN,DE" lang_text="Text for EN and DE" not_lang_text="Text for other languages"]`
- Wrapping content: `[alg_wc_ppq_translate lang="EN,DE"]Text for EN and DE[/alg_wc_ppq_translate]`, or use `not_lang="EN,DE"` to show the wrapped text everywhere except those languages.

For the translation troubleshooting workflow, see how to translate the price by quantity table and plugin strings.

> **Note:** the free `[alg_wc_wholesale_pricing_table]` and `[alg_wc_product_wholesale_pricing_table]` shortcodes are covered in the Price by Quantity shortcodes article.

PRICE BY QUANTITY

The products-list shortcode is a Pro feature of Price by Quantity. Upgrading unlocks it along with per-variation, per-category and per-tag pricing.
