How to Refresh the Wishlist with JavaScript Events

Developers · https://wpfactory.com/docs/wishlist-javascript-update-events/

Some themes and AJAX filter plugins reload product listings without a full page refresh, which can leave the wishlist buttons out of sync. Wishlist for WooCommerce can re-scan the page when specific JavaScript events fire, so the buttons update automatically.

Before you start

- WooCommerce, active.
- The JavaScript update events feature requires Wishlist for WooCommerce Pro. The toggle events settings below are available in the free version.

JavaScript update events (Pro)

1. Go to **WPFactory > Wishlist** (also reachable at **WooCommerce > Settings > Wishlist**) and open the **Advanced** tab.
2. In the **Javascript update events** section, enable the feature (`alg_wc_wl_updater_events_enable`).
3. In **Events** (`alg_wc_wl_updater_events`), list one JavaScript event per line. The built-in defaults are `prdctfltr-reload` , `yith_infs_added_elem` , and `wpfAjaxSuccess` .
4. Add the event your theme or filter plugin triggers after it swaps in new products, then save.

JavaScript toggle events

The same tab controls which browser events add or remove an item when a button is clicked. This is useful if taps are not registering on some devices.

Label	Option ID	Default
Default toggle events	`alg_wc_wl_default_js_toggle_events`	mouseup,touchend

Label	Option ID	Default
Mobile events	`alg_wc_wl_mobile_js_toggle_events`	mouseup,touchend

WISHLIST FOR WOOCOMMERCE

See every feature and the pricing on the Wishlist for WooCommerce plugin page.

View plugin →

Common click-related events you can use include `click`, `dblclick`, `mouseup`, and `touchend`. Separate multiple events with commas.
