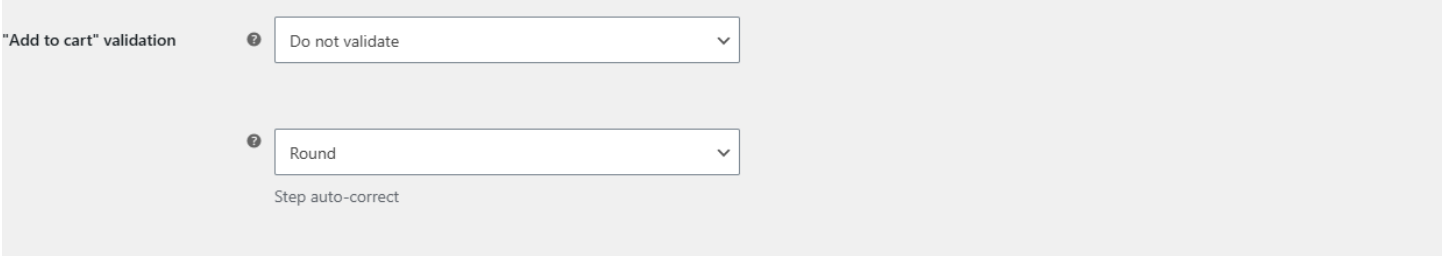
How to Validate and Auto-Correct Cart Quantities

How to · https://wpfactory.com/docs/woocommerce-validate-auto-correct-quantities/

The "Add to cart" validation controls in the Min Max Step Quantity Limits Manager for WooCommerce decide what happens when a customer tries to add a quantity that breaks your rules: allow it, block it with a notice, or silently correct it. This is a free feature.



Steps

1. Go to **WPFactory > Quantity Manager > General** (also reachable at **WooCommerce > Settings > Product Quantity**).
2. Set **"Add to cart" validation** (`wpfmmsq_add_to_cart_validation`) to one of:
   - **Do not validate**: no check on add to cart.
   - **Validate and add notices**: block the invalid quantity and show a notice (recommended for most stores).
   - **Validate and auto-correct quantities**: adjust the quantity to the nearest valid value automatically.
3. If you chose auto-correct, set **Step auto-correct** (`wpfmmsq_add_to_cart_validation_step_auto_correct`) to Round, Round up or Round down.
4. Click **Save changes**.

Options reference

Label	Option ID	Default	Free/Pro
"Add to cart" validation	`wpfmmsq_add_to_cart_validation`	Do not validate	Free
Step auto-correct	`wpfmmsq_add_to_cart_validation_step_auto_correct`	Round	Free
Validate on checkout	`wpfmmsq_validate_on_checkout`	Yes	Free

> **Tip:** pair validation with **Cart notices** and **Block checkout page** (General section) so wrong quantities are caught on the cart too, not only at add to cart.

QUANTITY MANAGER

These controls are free. Min Max Step Quantity Limits Manager for WooCommerce Pro adds per-category and per-attribute rules to validate against. Per-product minimum, maximum and step are free.
