Currency Options

How to · https://wpfactory.com/docs/currency-options/

The Currencies options in MSRP (RRP) Pricing for WooCommerce let you store a different MSRP for each currency, so shoppers using a currency switcher see the right suggested price. This is a Pro feature. Find it under **WPFactory > MSRP** (also reachable at **WooCommerce > Settings > MSRP**), on the **Countries & Currencies** section.

How it works

- **MSRP by currency (Enable section):** turns the feature on. Option ID `alg_wc_msrp_by_currency_enabled`, default No. Disabled in the free version.
- **Currencies:** select the currencies you want to price for. Option ID `alg_wc_msrp_currencies`. After you save, each selected currency gets its own MSRP field on every product's edit page.
- **Currency switching:** the active currency is provided by an external currency switcher plugin, so you will need one installed for customers to switch currencies.

> **Note:** per-currency MSRP is stored in the `_alg_msrp_by_currency` product meta. When the active currency has no value, MSRP Pricing falls back to the standard `_alg_msrp` value. The plugin does not convert prices by exchange rate on its own; it displays the value you enter for each currency.

Things to keep in mind

- **Upkeep:** maintaining a separate MSRP per currency across a large catalog takes time.
- **Dependency:** the feature relies on a compatible currency switcher, so test the two plugins together.

MSRP (RRP) PRICING FOR WOOCOMMERCE

This is a Pro feature of MSRP Pricing. Upgrading unlocks it along with MSRP by country, cart total savings and user-role display.
