Customize the Products per Page Options (Pro)

Pro Features · https://wpfactory.com/docs/customize-products-per-page-options/

Change the list of per-page options shoppers can choose

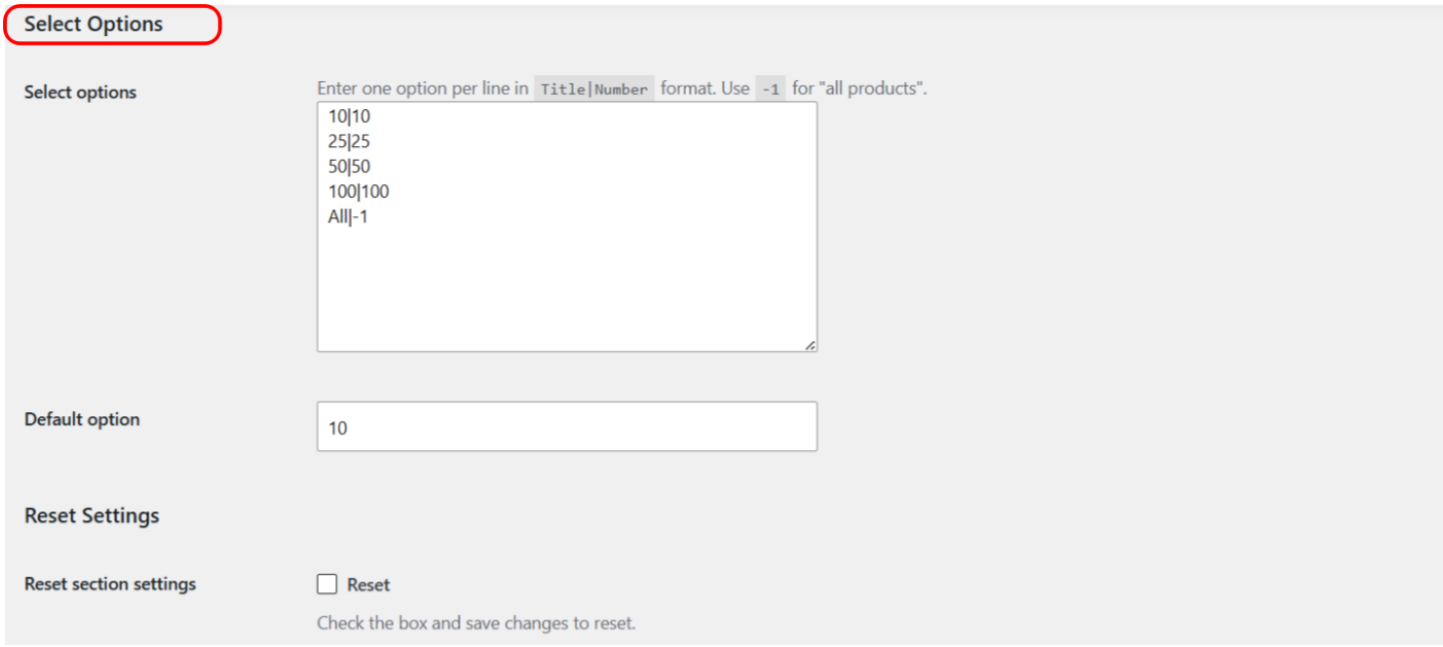

To customize the products per page options in Number of Products per Page - Pagination Manager for WooCommerce Pro, go to WPFactory > Products per Page, edit Select options in the Select Options block with one Title|Number entry per line (use -1 for all products), set the Default option, and save. The free version uses a fixed list.

Before you start

- WooCommerce, active.
- Number of Products per Page - Pagination Manager for WooCommerce Pro (in the free version the options field is read-only).

Edit the options

1. Go to **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**).
2. In the Select Options block, edit **Select options** (option id `alg_products_per_page_select_options`).
3. Enter one option per line in `Title|Number` format. Use `-1` for all products.
4. Set **Default option** (option id `alg_products_per_page_default`) to the number you want pre-selected.
5. Save changes.

Example

```
12|12
24|24
48|48
Show all|-1
```

This shows four choices labeled 12, 24, 48 and "Show all". The title on the left is what shoppers see; the number on the right is how many products load.

> **Note:** the title and number are separated by a vertical bar, in that order. A common mistake is to reverse them: write `All|-1`, not `-1|All`. Avoid setting a very large value or `-1` as the default on big catalogs, since loading every product at once slows the page.

Default option value

The **Default option** is free and controls what a first-time visitor sees before choosing. Set it to any number from your list, for example `24`.

PRODUCTS PER PAGE

Editing the options list is a Pro feature of Products per Page. Upgrading takes a couple of minutes and also unlocks the Products per Page widget.
