Difference Between the Pro and Free Version

Pro Features · https://wpfactory.com/docs/difference-between-pro-and-free-version-2/

Free vs Pro: what each version covers

The free and Pro versions of Payment Gateway Currency for WooCommerce have the same Convert Currency and Restrict Currency modes and options. The only difference is which gateways you can configure: Free covers Direct bank transfer, Check payments, Cash on delivery, PayPal, and WooCommerce PayPal Payments, while Pro covers any installed gateway, including Stripe.

The one difference that matters

- **Free:** you can set currencies for the five standard WooCommerce gateways: Direct bank transfer (`bacs`), Check payments (`cheque`), Cash on delivery (`cod`), PayPal (`paypal`), and WooCommerce PayPal Payments (`ppcp-gateway`).
- **Pro:** you can set currencies for **any** payment gateway installed on your store, including Stripe, third-party PayPal integrations, local gateways, and any custom gateway.

For a gateway that Pro would unlock, the free version still shows the settings row but the fields are disabled.

Feature comparison

Feature	Free	Pro
Convert Currency mode (rates, symbols, decimals)	Standard gateways	Any gateway
Restrict Currency mode (allowed / denied)	Standard gateways	Any gateway
Automatic rates (ECB, Fixer.io, WPML)	Yes	Yes
Frontend info, Admin, Compatibility, Advanced sub-sections	Yes	Yes

Feature	Free	Pro
WooCommerce Analytics recalculation	Yes	Yes
`[alg_wc_pgbc_product_price_table]` shortcode	Yes	Yes

> **In short:** if the gateway you want to control is one of the five standard ones, the free version is enough. For every other gateway, you need Pro.

PAYMENT GATEWAY CURRENCY FOR WOOCOMMERCE

Unlock currency control for every gateway with Payment Gateway Currency Pro.
