How to Export WooCommerce Products to Excel with Filters

How to · https://wpfactory.com/docs/export-woocommerce-products-to-excel/

To export WooCommerce products to an Excel file, use the Export Products screen in WooCommerce Products Import & Export with Excel. You can filter which products are included, choose exactly which fields and taxonomies to output, and optionally schedule the export to run on its own.

Open the export screen

Go to **WPFactory > Product Import/Export > Export Products**.

Filter which products to export

Use the filter table to narrow the export. All filters are optional; leave them blank to export everything.

Filter	What it does
Choose Taxonomy / Tax Terms	Limit the export to products in a taxonomy term, such as a specific product category or attribute value.
Keywords	Match products by a search term.
SKU	Match products by SKU.
Regular Price + Regular Price Selector	Compare the regular price against a value using an operator (>, >=, <=, <, ==, !=).
Sale Price + Sale Price Selector	Compare the sale price against a value using the same operators.
Limit Results / Start from	Set how many products to export (number to display) and an offset to start from.
Order	Sort the results DESC or ASC.
Export only main product, not variations	Output parent products only, skipping their individual variations.
Export only in stock products	Limit the export to products that are in stock.

Choose taxonomies and fields

1. Under **TAXONOMIES TO SHOW**, tick the taxonomies you want as columns (categories, tags, attributes, and any custom product taxonomy). Use **Check All** to include them all.
2. Under **FIELDS TO SHOW**, tick the product fields to export, such as `post_title`, `_sku`, `_regular_price`, `_sale_price`, `_stock`, and image fields. Use **Check All** to include everything. When WooCommerce Subscriptions is active, the subscription fields appear here too.
3. Click **Search** to generate the export and download the Excel file.

Schedule an export

Click **Schedule Export** to set an **Export date**, **Export time**, and an email address for a notification when the export finishes. Combine this with your filters and selected fields to produce a recurring,

ready-to-use export file. The most recent scheduled export is available at the top of the screen as **Last Scheduled Export**.

Reuse a saved configuration

If you have exported before and saved the setup, tick **Use Previously Saved Configuration** to reapply your last filters and field selection.

> **Tip:** if the export does not download in your browser, open **Settings > Main** and try an **Alternative Export Method**. Two alternative methods are available for stores where the default download does not trigger.

PRODUCTS IMPORT & EXPORT WITH EXCEL

An export from WooCommerce Products Import & Export with Excel doubles as a perfectly shaped import template: edit it and import it back to bulk-update prices, stock, or any field.
