How to Export Your Store Data to XML

How to · https://wpfactory.com/docs/export-woocommerce-xml/

To export store data to XML with Export Products, Orders & Customers for WooCommerce, go to WooCommerce > Export, open a tool, choose a date range, and click Download XML. For the Products and Customers from Orders sections, set Download File Type to XML, save, and click the section's Export button. XML export is free.

CSV or XML: which to pick

Format	Best for
CSV	Opening in Excel, Google Sheets, or Numbers; quick analysis and editing.
XML	Feeding another application or importing back into this plugin's Import tool.

From the Export dashboard

1. Go to **WooCommerce > Export** and open a tool.
2. Choose your date range.
3. Click **Download XML** instead of Download CSV.

From the Products or Customers from Orders section

These two sections have their own export controls and a **Download File Type** option:

- Products: `alg_export_products_fields_file_type`
- Customers from Orders: `alg_export_customers_from_orders_fields_file_type`

1. Set **Download File Type** to **XML** and click **Save changes**.
2. Click the section's **Export** button.

What the XML looks like

The plugin wraps the rows in a `<root>` element with one `<item>` per record; each column becomes a child element named after the field. This is the same shape the Import tool expects, so an XML export from one store imports cleanly into another.

EXPORT WOOCOMMERCE

See every feature and the pricing on the Export WooCommerce plugin page.

View plugin →

> **Note:** the Ajax Download option applies to the Product CSV export only. XML exports always download directly.

Need a hand?

CSV and XML export are both free in Export Products, Orders & Customers for WooCommerce. Our team answers every ticket on the Export WooCommerce support forum.
