Getting Started with Multiple External Products URLs & Currencies for WooCommerce

Getting Started · https://wpfactory.com/docs/external-products-getting-started/

To get more control over WooCommerce external (affiliate) products, install Multiple External Products URLs & Currencies for WooCommerce, then go to **WPFactory > Advanced External Products** (also reachable at **WooCommerce > Settings > Advanced External Products**). Its Currency, Links and Multiple URLs sections add extra buy links, change the displayed currency and open links in a new tab.

What the plugin does

External Products URLs & Currencies works only on products of the **External/Affiliate product** type. Other product types are not changed.

Section	What it does	Free	Pro
Currency	Shows external product prices with a different currency code and a custom currency symbol	All external products	Also per product
Links	Opens the external product button in a new browser tab on single product pages and archives	All external products	Also per product
Multiple URLs	Adds extra buy buttons, each with its own URL and button text, on single product pages and archives	Buttons template	Also Dropdown template

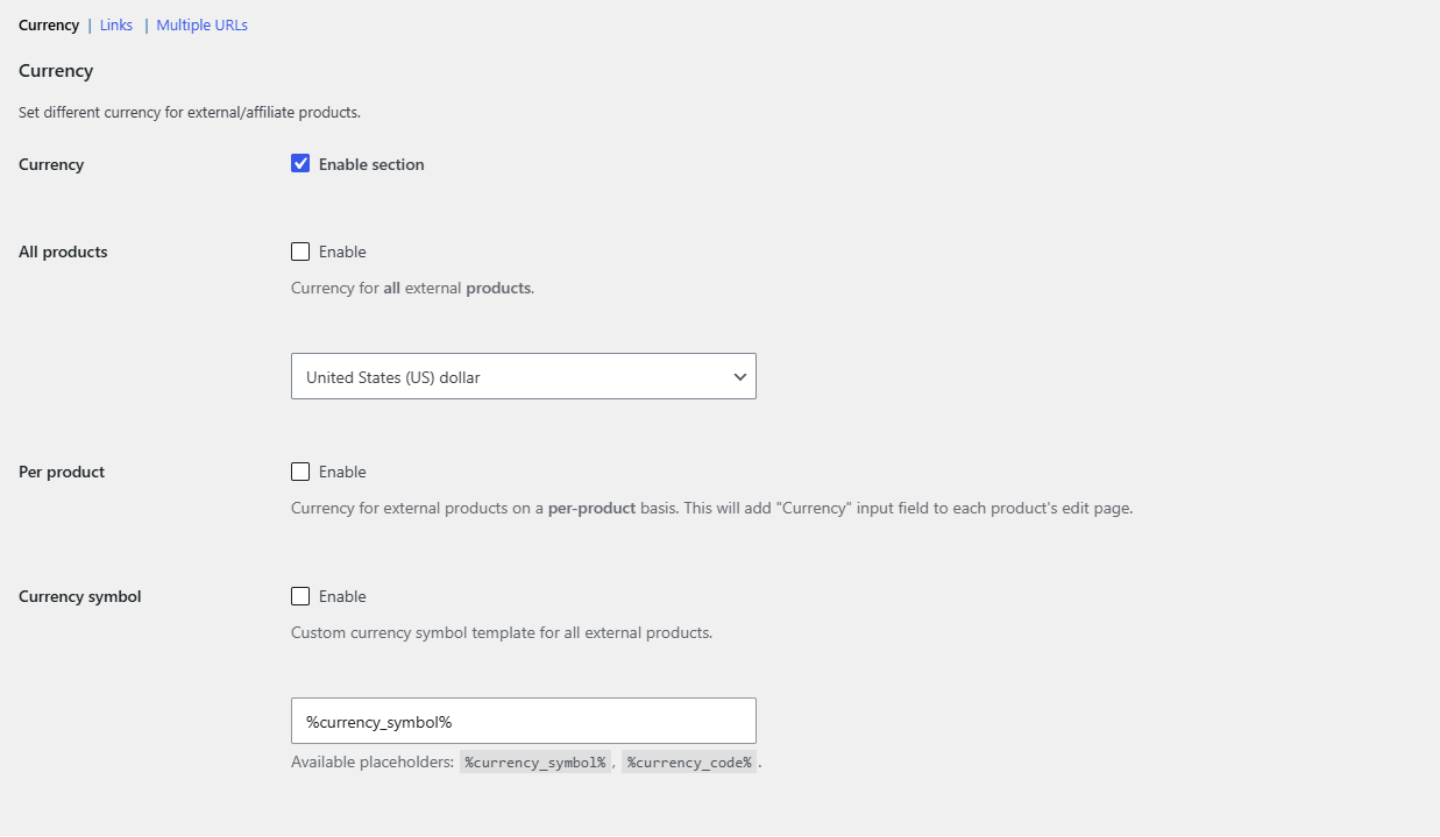

See Free vs Pro for the full comparison.

Requirements

- WordPress with WooCommerce active.
- At least one product set to **External/Affiliate product** with a **Product URL**.
- The plugin declares compatibility with WooCommerce High-Performance Order Storage (HPOS).

Install and activate

1. Go to **Plugins > Add New Plugin > Upload Plugin** and upload the plugin zip, then click **Install Now** and **Activate**.
2. If you upgrade from free to Pro, install and activate Pro. The free build detects Pro and stays idle, and your settings carry over.
3. Go to **WPFactory > Advanced External Products**. The **Currency** section opens first; **Links** and **Multiple URLs** are the other section tabs.

Default state after activation

All three sections are enabled by default, but every individual option is off. Nothing changes on your storefront until you turn an option on. The one visible change is the **Extra product URLs** field that appears on the edit page of external products, because the Multiple URLs section is enabled by default.

EXTERNAL PRODUCTS URLS & CURRENCIES

This feature is free. External Products URLs & Currencies Pro adds per-product currency, per-product new tab control and a Dropdown template for extra buy links.
