How to Open External Product Links in a New Tab in WooCommerce

How to · https://wpfactory.com/docs/external-products-new-tab/

To open external product links in a new tab in WooCommerce, use Multiple External Products URLs & Currencies for WooCommerce: go to **WPFactory > Advanced External Products > Links** (also reachable at **WooCommerce > Settings > Advanced External Products > Links**), and under **All Products** check **Single** (product pages) and **Archives** (shop and category pages), then save.

Open all external links in a new tab (free)

1. Go to **WPFactory > Advanced External Products > Links** (also reachable at **WooCommerce > Settings > Advanced External Products > Links**).
2. Make sure **Links** (Enable section) is checked. It is on by default.
3. Under **All Products**, check **Single** to open the buy button in a new tab on single product pages.
4. Check **Archives** to do the same on the shop page, category pages and other product lists.
5. Click **Save changes**.

Choose product by product (Pro)

1. Go to **WPFactory > Advanced External Products > Links** (also reachable at **WooCommerce > Settings > Advanced External Products > Links**).
2. Under **Per Product**, check **Single**, **Archives** or both, and click **Save changes**.
3. Edit an external product. On the **General** tab you now see **Link in a new tab** and **Link in a new tab on archives**, each with **Default**, **Yes** and **No**.
4. Set **Yes** for the products whose links should open in a new tab and click **Update**.

> **Note:** the per-product setting adds new tab links on top of the All Products options. When an All Products option is on, every external product opens in a new tab in that location, and a per-product **No** does not switch it off. To have only some products open in a new tab, keep the All Products option off and set **Yes** on those products.

What changes on the page

- On single product pages, the buy button form gets `target="_blank"`.
- On archives, the buy button link gets `target="_blank"`.
- Extra buy buttons added with Multiple URLs follow the same settings.

FAQ

Does this affect simple or variable products?

No. Only products of the External/Affiliate product type are changed.

My theme's buttons still open in the same tab. Why?

The plugin changes the standard WooCommerce button output. Themes or page builders that print their own buy buttons, without the standard WooCommerce templates and hooks, are not affected.

Can I open links in a new tab on archives but not on product pages?

Yes. The Single and Archives options are separate. Check only Archives.

Is this free?

The All Products options are free. The per-product fields require Pro.

EXTERNAL PRODUCTS URLS & CURRENCIES

This feature is free. External Products URLs & Currencies Pro adds per-product new tab fields, so you can choose which affiliate links leave the page.
