Fix Price-by-Quantity Table Display Issues

Troubleshooting · https://wpfactory.com/docs/fix-price-by-quantity-table/

Fix a broken or missing pricing table

If the Price by Quantity & Bulk Quantity Discounts for WooCommerce table is missing or broken after a theme or builder change, update the plugin and test with a default theme such as Storefront. For real-time price display, set the Price identifier under Price Display by Qty > Advanced Options, or place the table with the [alg_wc_product_ppq_table] shortcode.

Symptoms

- The pricing table is missing or its layout is broken.
- Console errors mention plugin selectors.
- The table shows on some pages but not others.

Cause

The real-time price display targets specific page elements by CSS selector. When a theme or builder changes the markup, those selectors can miss. Product-page tables are added through WooCommerce template hooks, which a heavily customized theme may not fire.

Fix step by step

1. **Inspect the page.** Open the product page, right-click, choose Inspect, and check the console for errors and the DOM where the table should appear.
2. **Update the plugin.** Make sure you are on the latest version of Price by Quantity.
3. **Test a default theme.** Temporarily switch to Storefront or a Twenty Twenty-x theme. If the table returns, the issue is theme-related.
4. **Point the price display at the right element.** If you use real-time price display, go to **WPFactory > Product Price by Quantity > Price Display by Qty > Advanced Options** and

set **Price identifier** (`alg_wc_wholesale_pricing_price_by_qty_display_id`, default `p.price`) and **Variations** (`alg_wc_wholesale_pricing_price_by_qty_display_id_variation`) to the selectors your theme uses for the price.

5. **Place a table with a shortcode.** Instead of relying on automatic output, add the table where you want it with `[alg_wc_product_ppq_table]` (or the long form `[alg_wc_product_wholesale_pricing_table]`). Pass `product_id` if you are outside a product context.

> **Note:** the correct shortcodes are `[alg_wc_product_ppq_table]` and `[alg_wc_ppq_table]`. There is no `[wpfactory_price_by_quantity]` shortcode.

Report a theme-specific issue

If the markup changed and the table still will not attach, send your theme name and version plus reproduction steps to our team on the Price by Quantity support forum.
