Frontend Info Placeholders and Templates Reference

References · https://wpfactory.com/docs/frontend-info-placeholders-and-templates-reference/

When **Frontend info** is enabled, Payment Gateway Currency for WooCommerce shows the used conversion rate and converted amounts in the cart, at checkout, on order details, and in emails. Each place it appears is a **position**, and each position renders a small **template** built from placeholders. This reference lists the positions, the placeholders available in each, and the default templates.

Where to configure it

Go to **WPFactory > Payment Gateway Currency** (also reachable at **WooCommerce > Settings > Payment Gateway Currency**), open the **Convert Currency** sub-tab, then the **Info** section.

Label	Option ID	Default	What it does

Frontend info	`alg_wc_pgbc_convert_currency_show_info`	No	Master switch for all frontend info display and for the price table shortcode.
Positions	`alg_wc_pgbc_convert_currency_info_hooks`	All positions	Which positions display the info. Affected by **General > Convert on**.
Templates	`alg_wc_pgbc_convert_currency_info_hooks_custom_templates`	(none)	Pick positions you want to give a custom template. Save to reveal a text box for each under **Custom Templates**.

Extra templates	`alg_wc_pgbc_convert_currency_info_hooks_extra_template[{scope}]`	(none)	Set a different template for the same position on the Cart page or on AJAX (mini-cart).
Exceptions	`alg_wc_pgbc_convert_currency_info_hooks_exceptions[{scope}]`	(none)	Exclude selected positions from the Cart, Checkout, or AJAX (mini-cart) contexts.
Custom template text	`alg_wc_pgbc_convert_currency_info_template[{position}]`	Position default	The actual template for a position you selected under **Templates**.

Placeholders

Every position can use these three placeholders:

Placeholder	Value

`%convert_rate%`	The conversion rate used for this order or session.
`%convert_currency%`	The target currency code the amount was converted to.
`%shop_currency%`	The store's base currency code.

Price positions (the ones that render a specific amount, such as cart product price, cart total, order totals, shipping, fees, taxes, and coupons) additionally provide:

Placeholder	Value
`%price%`	The converted amount, formatted in the target currency.
`%unconverted_price%`	The original amount, formatted in the shop currency.

Positions and their default templates

The positions fall into three groups by default template. Price positions show the converted price with the original in brackets; the email position prints a rate line; the single product summary outputs the price table shortcode.

Position	Default template
Cart product price, Cart product subtotal, Cart subtotal, Cart total, Cart totals (Coupons, Shipping, Fees, Taxes), Order product subtotal, Order subtotal, Order totals (Discount, Shipping, Fees, Taxes), Order total	`%price% <small>(%unconverted_price%)</small>`

Email: After order details	`<p><strong>%shop_currency%%convert_currency%:</strong> %convert_rate%</p>`
Single product summary	`[alg_wc_pgbc_product_price_table]`
Cart totals: After order total, Checkout: After order total, Order: Before subtotal (and any other rate-only position)	`<tr><th>%shop_currency%%convert_currency%</th><td>%convert_rate%</td></tr>`

Editing a template

1. Under **Positions**, make sure the position you want is selected.
2. Add it to the **Templates** option and click **Save changes**.
3. A text box for that position appears in the **Custom Templates** section, pre-filled with the default template and a note of the placeholders it supports.
4. Edit the template and save again.

The default template for a rate-only position uses a table row (`<tr>`), which suits positions that print inside a totals table. If you place the info somewhere that is not a table, switch the template to your own markup.

PAYMENT GATEWAY CURRENCY FOR WOOCOMMERCE

Frontend info keeps shoppers informed about the currency and rate at checkout. To convert on every payment method, unlock all gateways with Payment Gateway Currency for WooCommerce Pro.
