Pro Features in Name Your Price for WooCommerce

Pro Features · https://wpfactory.com/docs/general-button-and-forms/

What the Pro version of Name Your Price adds

Name Your Price: Make Your Own Offer for WooCommerce Pro adds targeting and automation. It unlocks the Enable for selected products only mode for per product, per variation, and per category offers, the offer button on shop and category pages or custom hooks, Auto-Accept and Auto-Reject price thresholds, and a Dokan multi-vendor integration.

Product, category, and variation targeting

In the free version, offers are enabled site-wide (with the free stock, price, and category-based exclusions). Pro adds the **Enable for selected products only** mode, which turns on:

- **Per product** (`alg_wc_price_offerings_per_product`): enable offers on individual products from the product's **Product data** panel, with per-product minimum, maximum, step, and default price.
- **Per variation** (`alg_wc_price_offerings_per_product_variation`): enable offers on individual variations of a variable product.
- **Per product category** (`alg_wc_price_offerings_per_category`): require or exclude offers for chosen product categories.

See Enable price offers for selected products, categories, and variations.

Button on shop and category pages

The free version places the button anywhere on the single product page. Pro adds the **Advanced Positions Options**: show the button on **archive pages** (shop and category pages) with `alg_wc_price_offerings_button[position_archives_hook]`, and add the button on any **custom hook(s)** with `alg_wc_price_offerings_button[position_custom_hook]`.

Automatic accept and reject

The free version lets you accept, reject, and counter each offer by hand. Pro adds:

- **Auto-Accept** (`alg_wc_po_auto_accept[min_price]`): automatically accept any offer at or above a minimum price, and add the product to the cart.
- **Auto-Reject** (`alg_wc_po_auto_reject[max_price]`): automatically reject any offer at or below a maximum price.

Both thresholds can also be set per product. See Auto-accept and auto-reject offers.

Dokan multi-vendor

Pro adds a **Dokan multi-vendor** integration (`alg_wc_po_dokan_enabled`) so vendors can see and manage offers on their own products from the Dokan dashboard, with a configurable set of visible fields.

What is already free

To avoid confusion, these are free and do not require Pro: the button label, HTML class, HTML style, and single-product position; the position priority; all form fields (quantity, customer name, phone, message, send-a-copy) and their required flags; price step, minimum, maximum, and default; the `[alg_wc_price_offers_button]` shortcode; form styling; all email and action (reject/accept/counter) templates including `%add_to_cart_url%`; the offers meta box and its columns; prevent duplicate offers; auto-complete/uncomplete; payment gateway restriction; and the REST API.

NAME YOUR PRICE

These are the Pro features of Name Your Price. If you are still on the free version, upgrading unlocks targeting and automation along with the rest of the Pro toolkit.
