General Options in Convert Currency

How to · https://wpfactory.com/docs/general-currency-options/

Convert Currency: General options and automatic rates

The General options for Convert Currency in Payment Gateway Currency for WooCommerce are at WPFactory > Payment Gateway Currency > Convert Currency > General. They control what gets converted (shipping, coupons, and cart fees, all on by default), when conversion runs through the Convert on setting, AJAX conversion, and how exchange rates are updated automatically.

Where to find it

Go to **WPFactory > Payment Gateway Currency** (also reachable at **WooCommerce > Settings > Payment Gateway Currency**), then open the **General** sub-tab under Convert Currency.

What to convert

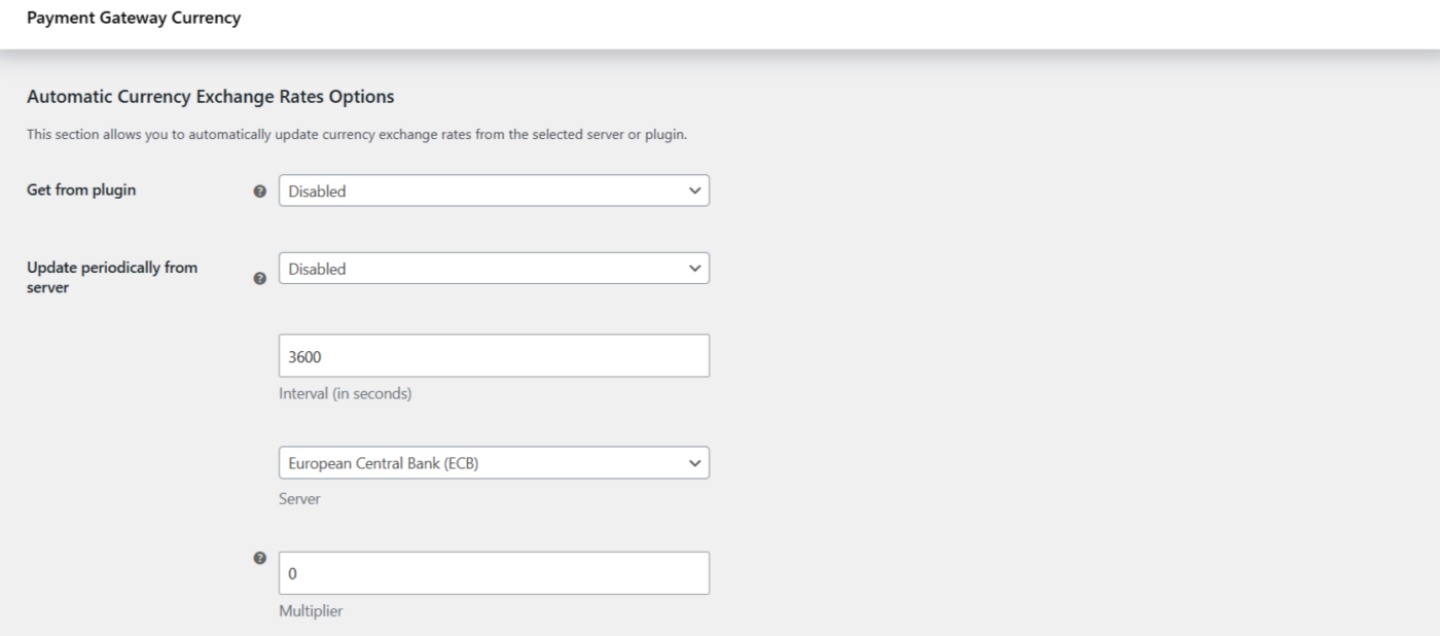

Each of these is a checkbox, on by default, controlling whether that amount is converted along with product prices.

Label	Option ID	Default
Shipping price	`alg_wc_pgbc_convert_currency_advanced[shipping]`	Yes
Free shipping min amount	`alg_wc_pgbc_convert_currency_advanced[shipping_free_min_amount]`	Yes
Coupon amounts (fixed cart/product discount only)	`alg_wc_pgbc_convert_currency_advanced[coupon]`	Yes
Coupon minimum spend	`alg_wc_pgbc_convert_currency_advanced[coupon_min_amount]`	Yes
Coupon maximum spend	`alg_wc_pgbc_convert_currency_advanced[coupon_max_amount]`	Yes
Cart fees	`alg_wc_pgbc_convert_currency_advanced[cart_fee]`	Yes

When to convert

- **Convert on** (`alg_wc_pgbc_convert_currency_on_checkout` , default `Cart and checkout`): a selector with three values, **Cart and checkout**, **Checkout only**, and **After checkout** (thank-you page and final order only). This is a single dropdown, not a set of checkboxes.
- **Convert on AJAX** (`alg_wc_pgbc_convert_currency_on_ajax` , default `Yes`): a separate checkbox that also converts prices in AJAX responses such as the mini-cart.
- **Convert on languages** (`alg_wc_pgbc_convert_currency_on_wpml`): shown only when WPML or Polylang is active. Leave empty to convert on all languages.

Automatic Currency Exchange Rates

Label	Option ID	Default
Get from plugin	`alg_wc_pgbc_convert_currency_auto_rates_plugin`	Disabled
Update periodically from server	`alg_wc_pgbc_convert_currency_auto_rates_cron`	Disabled
Interval (in seconds)	`alg_wc_pgbc_convert_currency_auto_rates_interval`	3600
Server	`alg_wc_pgbc_convert_currency_auto_rates_server`	European Central Bank (ECB)
Multiplier	`alg_wc_pgbc_convert_currency_rate_multiplier`	0 (ignored)
Update all rates now	`alg_wc_pgbc_convert_currency_auto_rates_now`	No

About the Multiplier: it is a plain multiplier applied to each fetched rate, not a percentage. A value of `1.05` multiplies the rate by 1.05. It is ignored when set to 0. If you choose Fixer.io as the server, extra fields appear for your API key and endpoint URL. See Update exchange rates automatically.

PAYMENT GATEWAY CURRENCY FOR WOOCOMMERCE

These General options are free. Payment Gateway Currency for WooCommerce Pro extends conversion to every payment gateway on your store.
