Getting Started with Conditional Shipping for WooCommerce

How to · https://wpfactory.com/docs/how-to-use-conditional-shipping/

Conditional Shipping for WooCommerce: Restrict Shipping Options by Anything hides WooCommerce shipping methods that fail conditions you set, such as order amount, city, user role, payment gateway, product, category or date and time. Configure it at **WPFactory > Conditional Shipping** (also reachable at **WooCommerce > Settings > Conditional Shipping**).

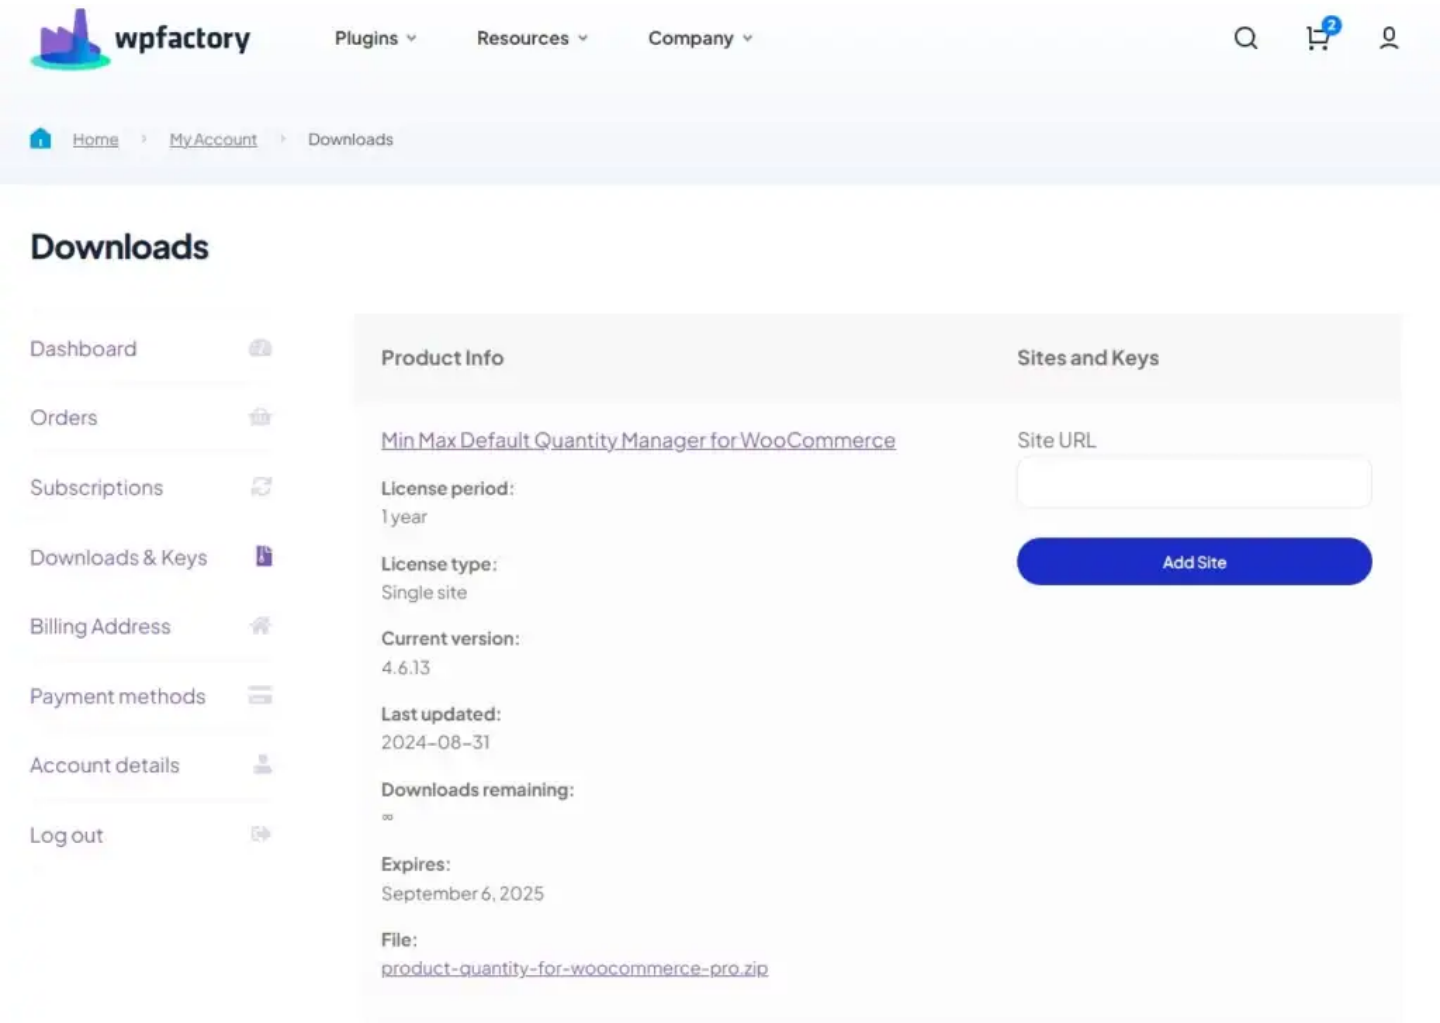

What it does

For each condition you enable, you enter a value against each shipping method (Flat rate, Free shipping, Local pickup and so on). At the cart and checkout, Conditional Shipping removes any method whose condition is not met. Methods you leave empty are not affected.

Install and activate

1. Free: go to **Plugins > Add New**, search for **Conditional Shipping for WooCommerce** by WPFactory, then install and activate it.
2. Pro: download **Conditional Shipping for WooCommerce: Restrict Shipping Options by Anything Pro** from your WPFactory account, upload the ZIP at **Plugins > Add New > Upload**

Plugin and activate it. WooCommerce must be active.

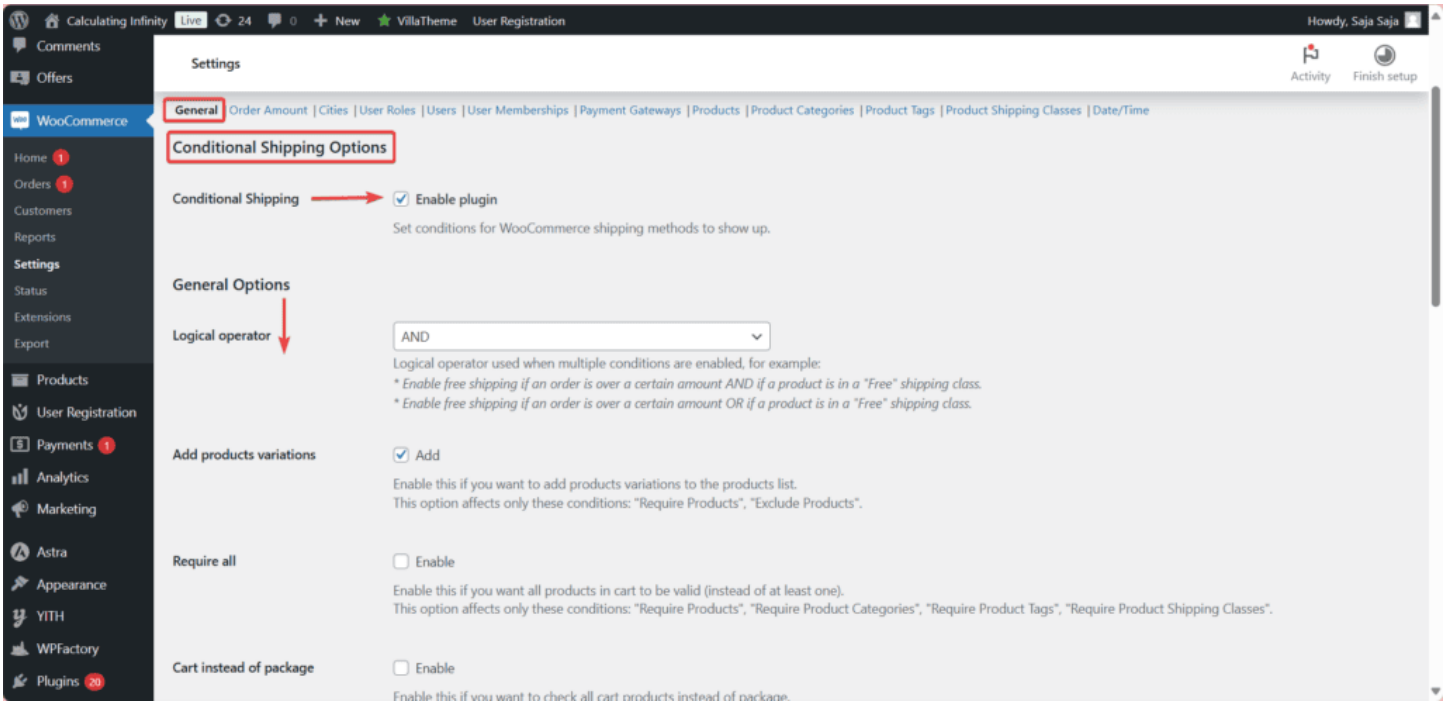

For more detail, see How to install Conditional Shipping.

First setup

1. Go to **WPFactory > Conditional Shipping**. On the General section, confirm **Enable plugin** is ticked (it is on by default).
2. Leave **Logical operator** at **AND** (the default) for now. It only matters once you use more than one condition.
3. Under **Available Conditions**, tick the condition you need, for example **Minimum Order Amount** , and save. Every condition is off by default.
4. Click the condition's link to open its section, for example **Order Amount**. The same **Enable condition** checkbox appears there.

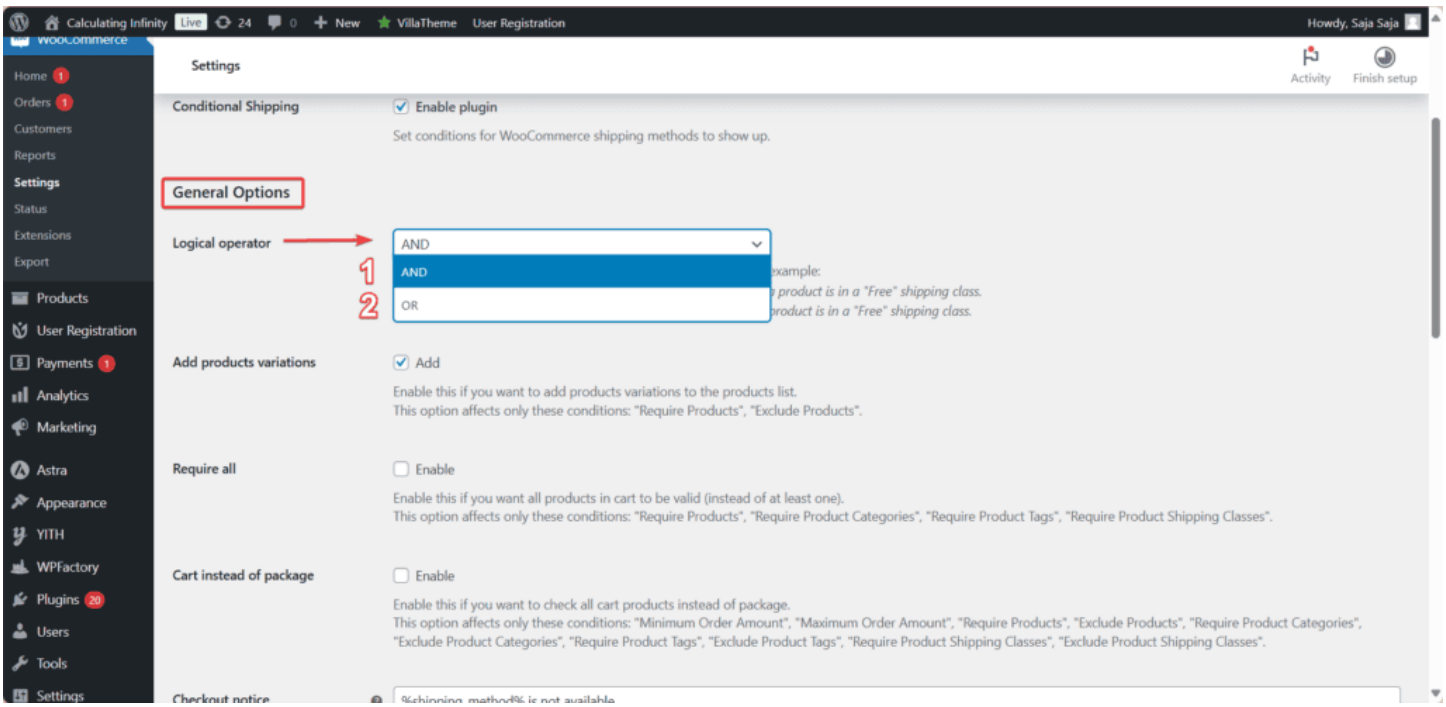

5. Enter a value against each shipping method you want to restrict, for example `50` next to Free shipping, and leave the others empty. Save.
6. Add products to a cart below and above the value to confirm the method hides and shows as expected.

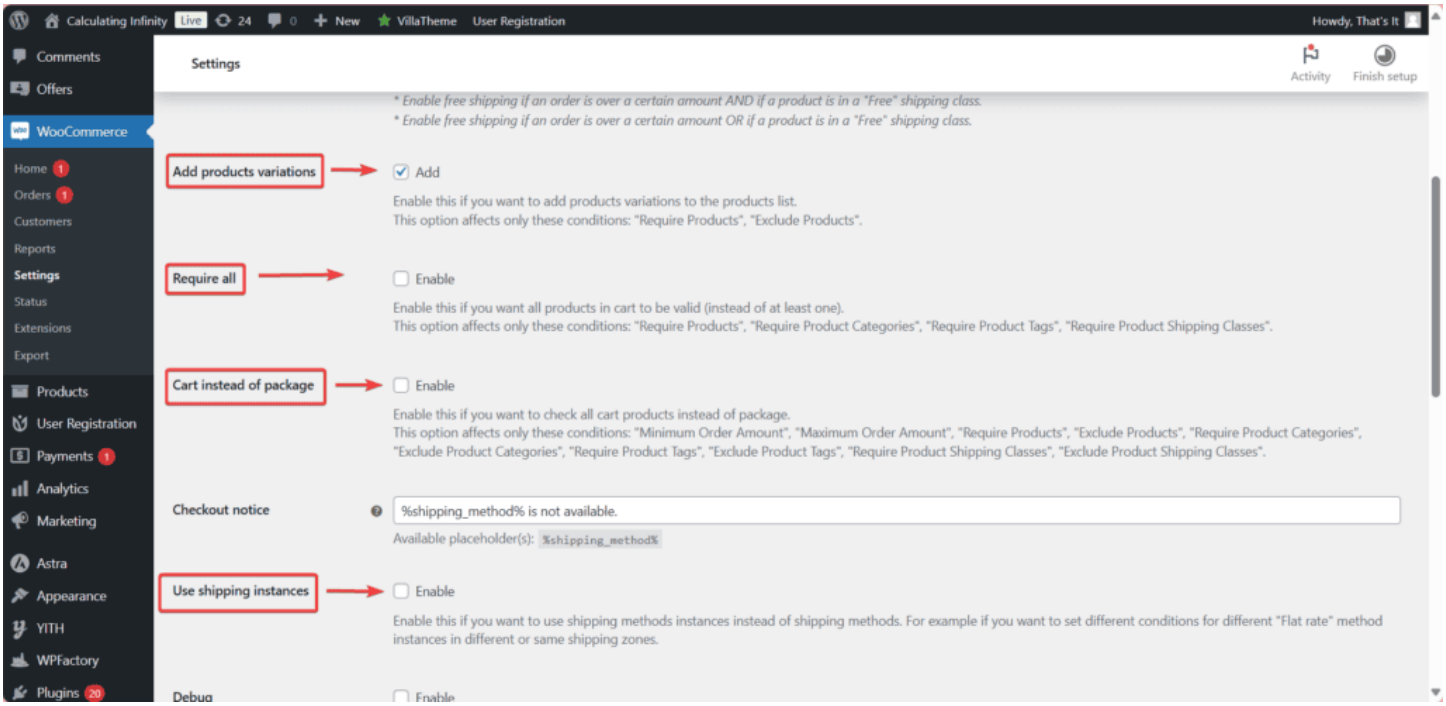

General options

Label	What it does	Default	Free/Pro
Logical operator	AND: every enabled condition must pass. OR: any one passing condition is enough.	AND	Free
Add products variations	Adds variations to the product list in Require Products and Exclude Products.	On	Free
Require all	All cart products must match, instead of at least one (Require Products, Categories, Tags and Shipping Classes only).	Off	Free
Cart instead of package	Checks the whole cart instead of the current shipping package for order amount and product-based conditions.	Off	Free

Label	What it does	Default	Free/Pro
Checkout notice	Shown if the chosen method becomes unavailable during checkout. Supports `%shipping_method%`.	`%shipping_method% is not available.`	Free
Use shipping instances	Set conditions per shipping method instance, for example a different Flat rate rule in each zone.	Off	Pro
Debug	Writes a log to WooCommerce > Status > Logs. Covers only the Cities and Date/Time conditions.	Off	Free

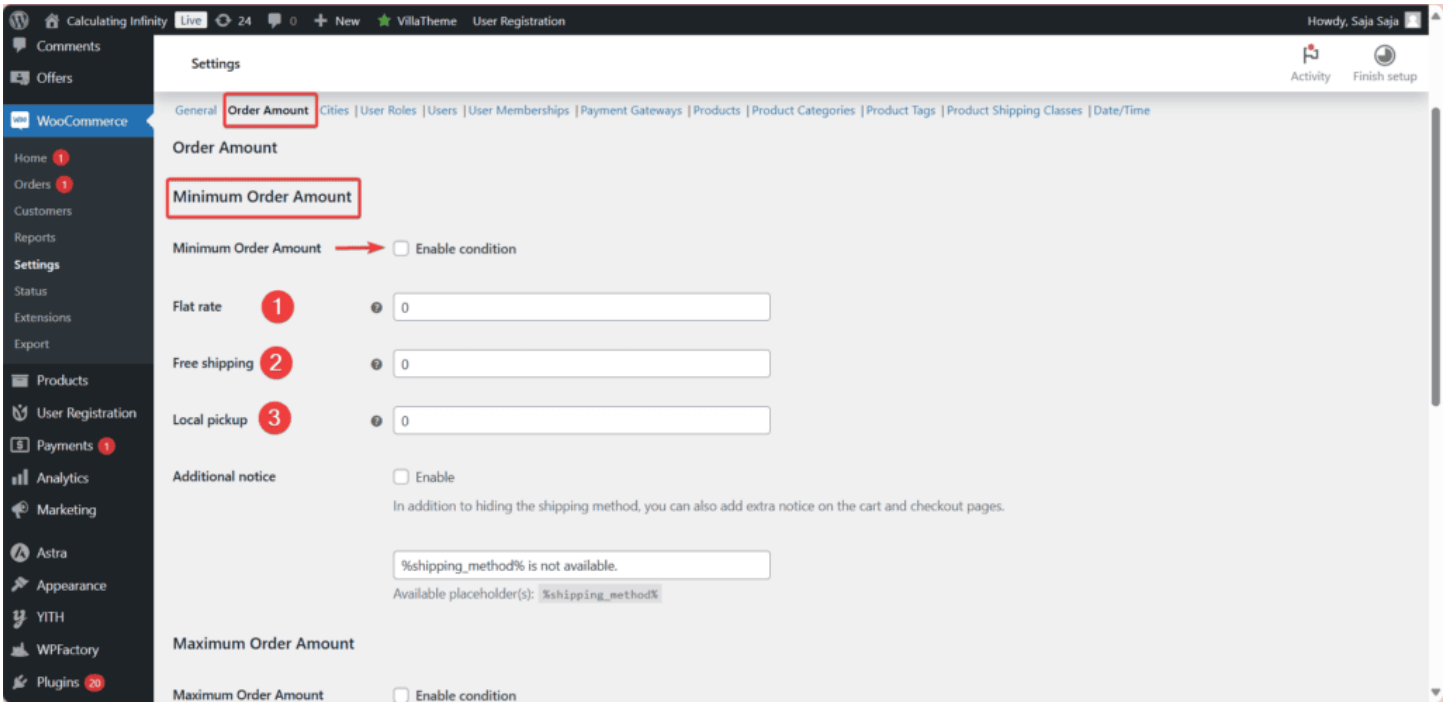

More on these options: Conditional Shipping options and general settings, AND vs OR and debug logging.

Main features

Every condition has a Require and an Exclude version, and each has its own section. All conditions are free.

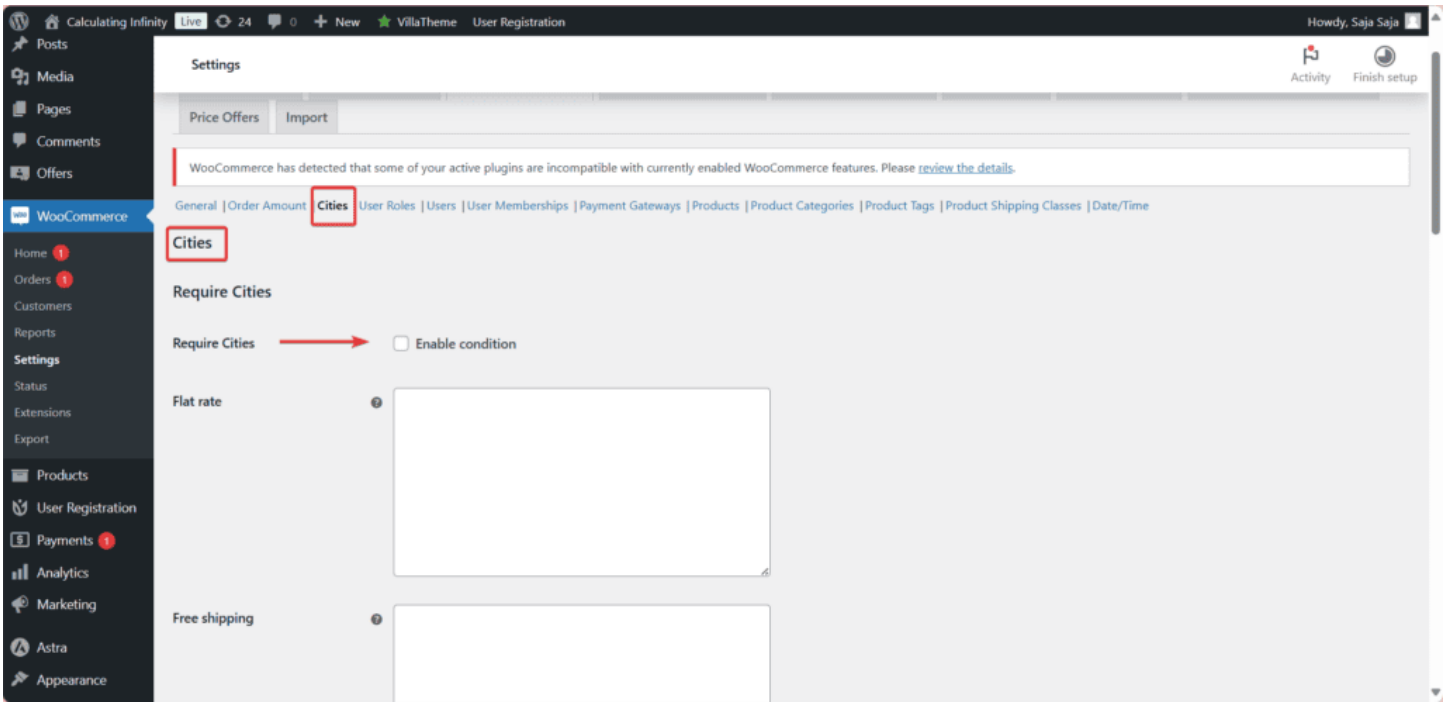

Order Amount

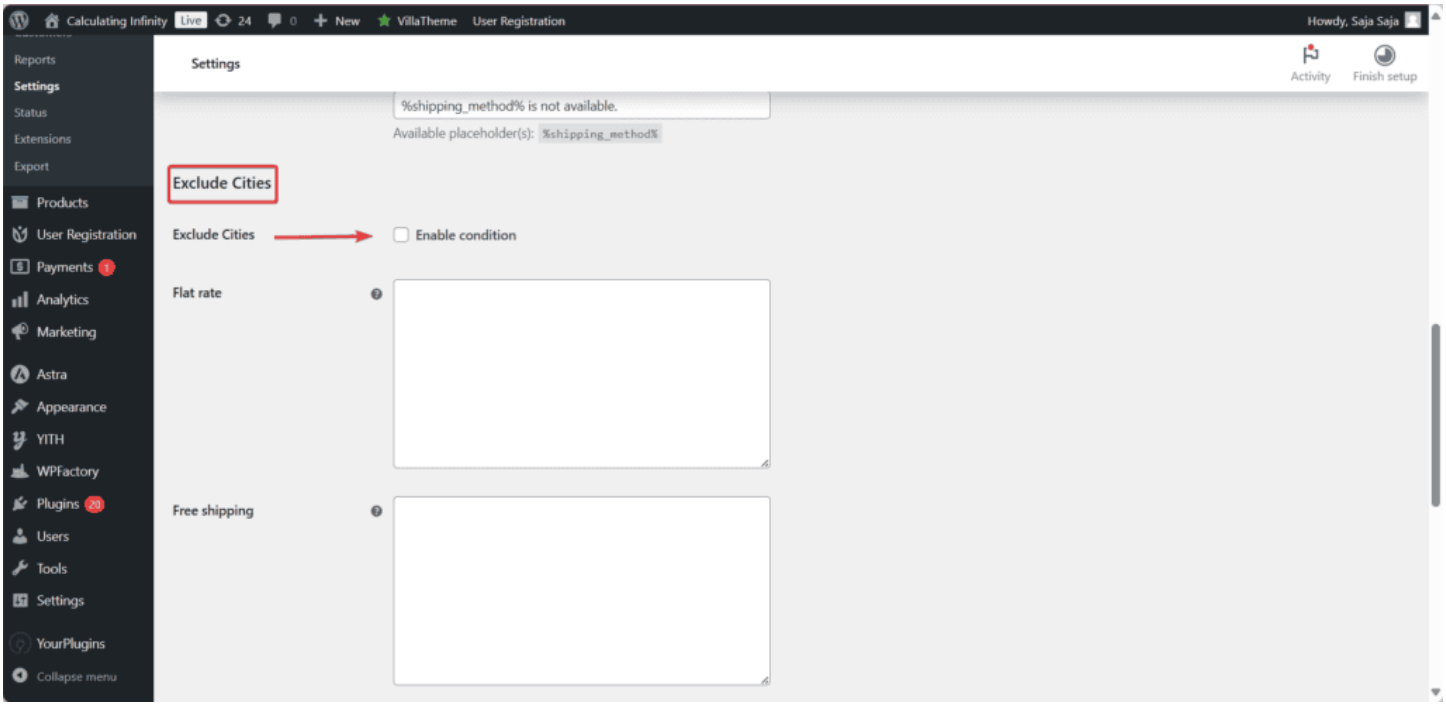

Minimum Order Amount hides a method when the cart total is below the value you enter, and **Maximum Order Amount** hides it when the total is above. See minimum and maximum order amount shipping rules.

Cities

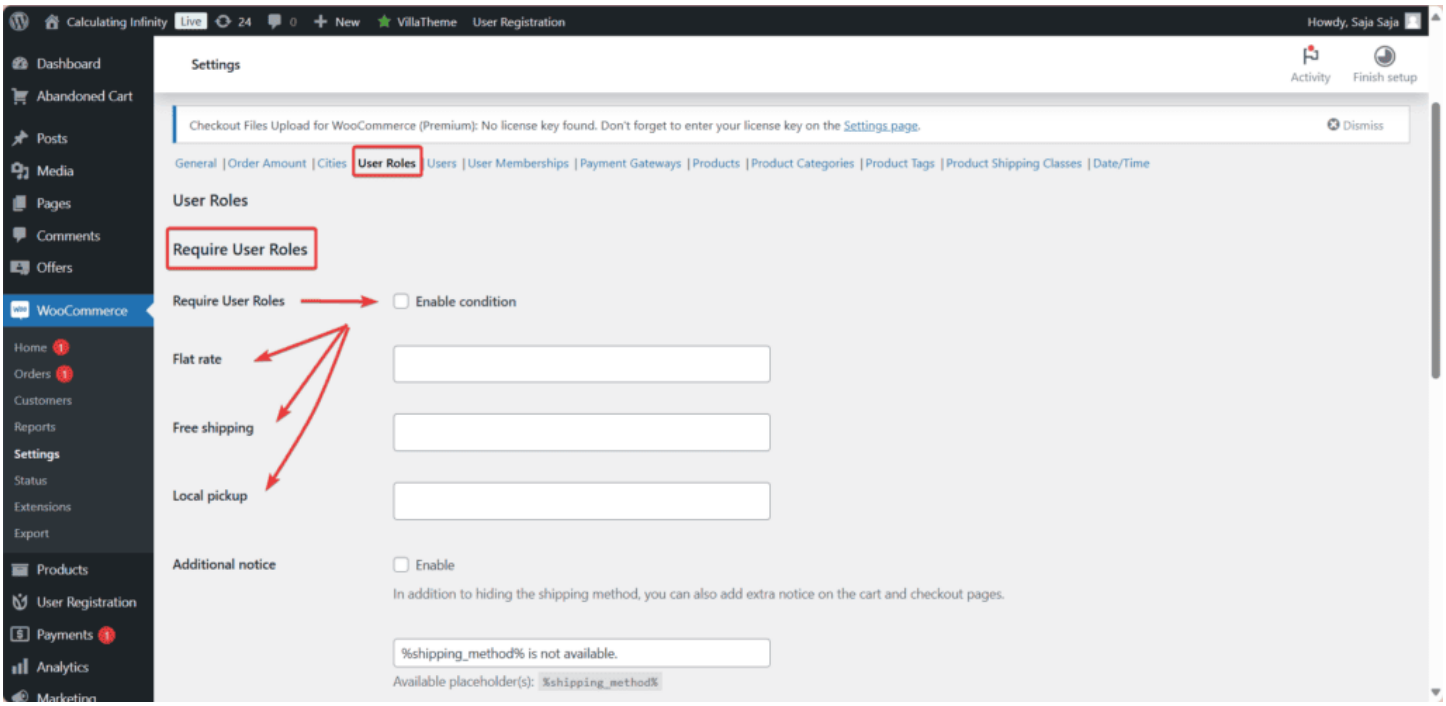

Enter city names one per line to allow a method only for those cities (**Require Cities**) or to hide it for them (**Exclude Cities**). Matching ignores letter case. See require cities and exclude cities.

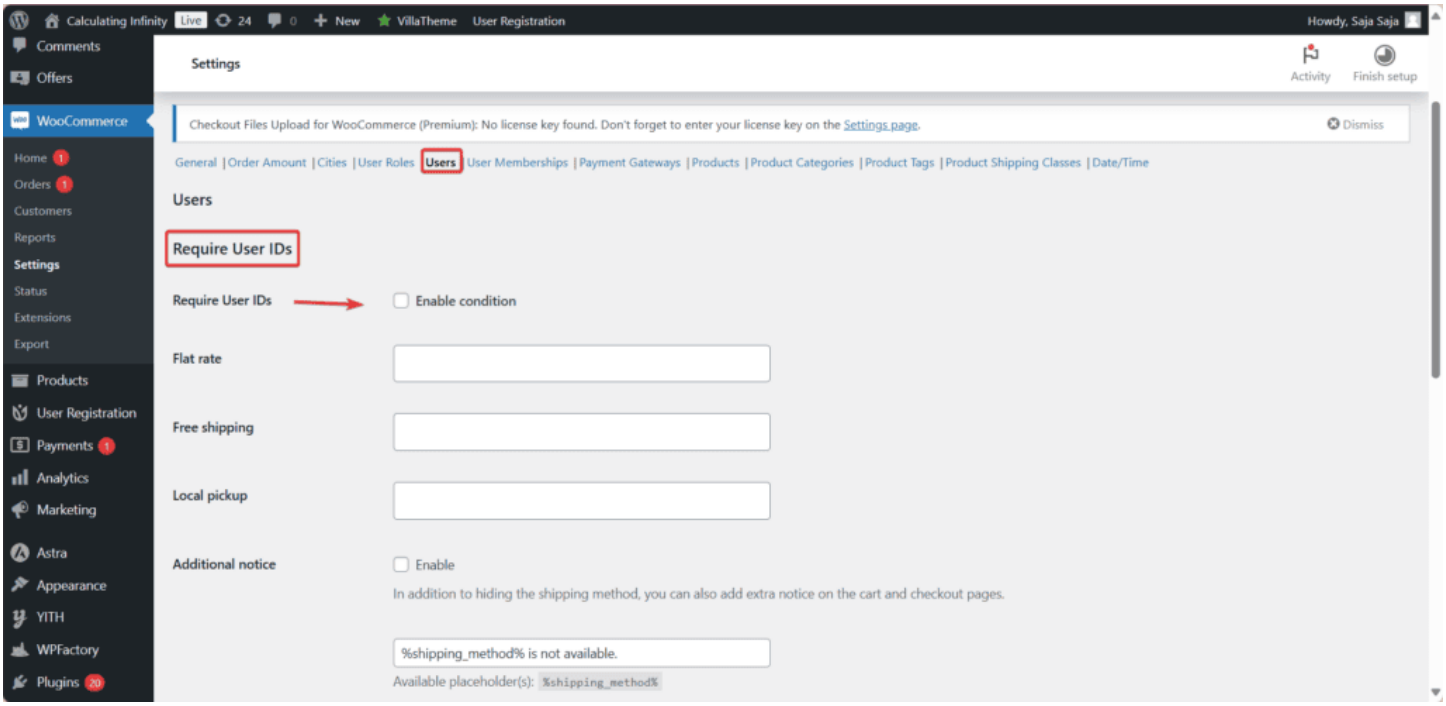

User Roles and Users

Allow or exclude a method by user role (a Guest role covers logged-out visitors, and only the customer's first role is checked) or by user ID. See shipping rules by user role and shipping rules by user ID.

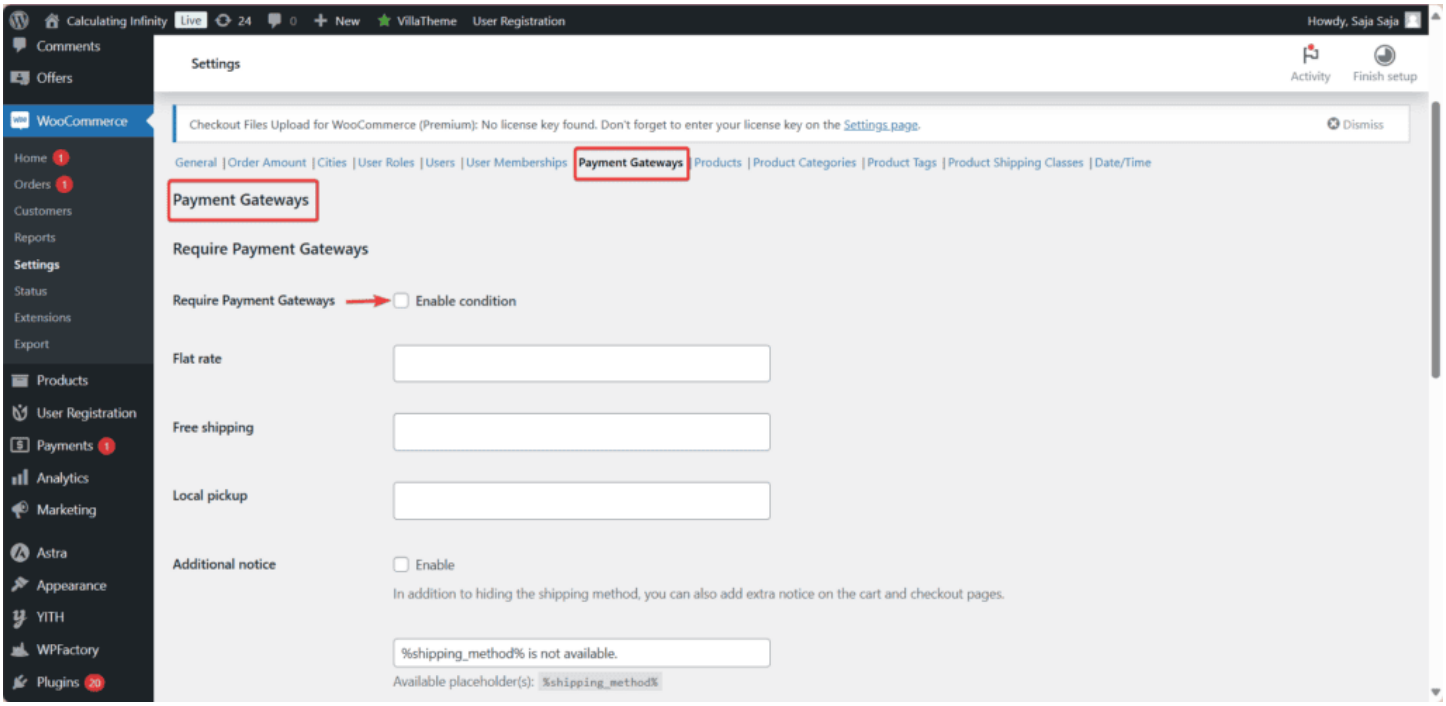

User Memberships

Allow or exclude a method by membership plan. This condition works with the WooCommerce Memberships plugin. See membership-based shipping methods.

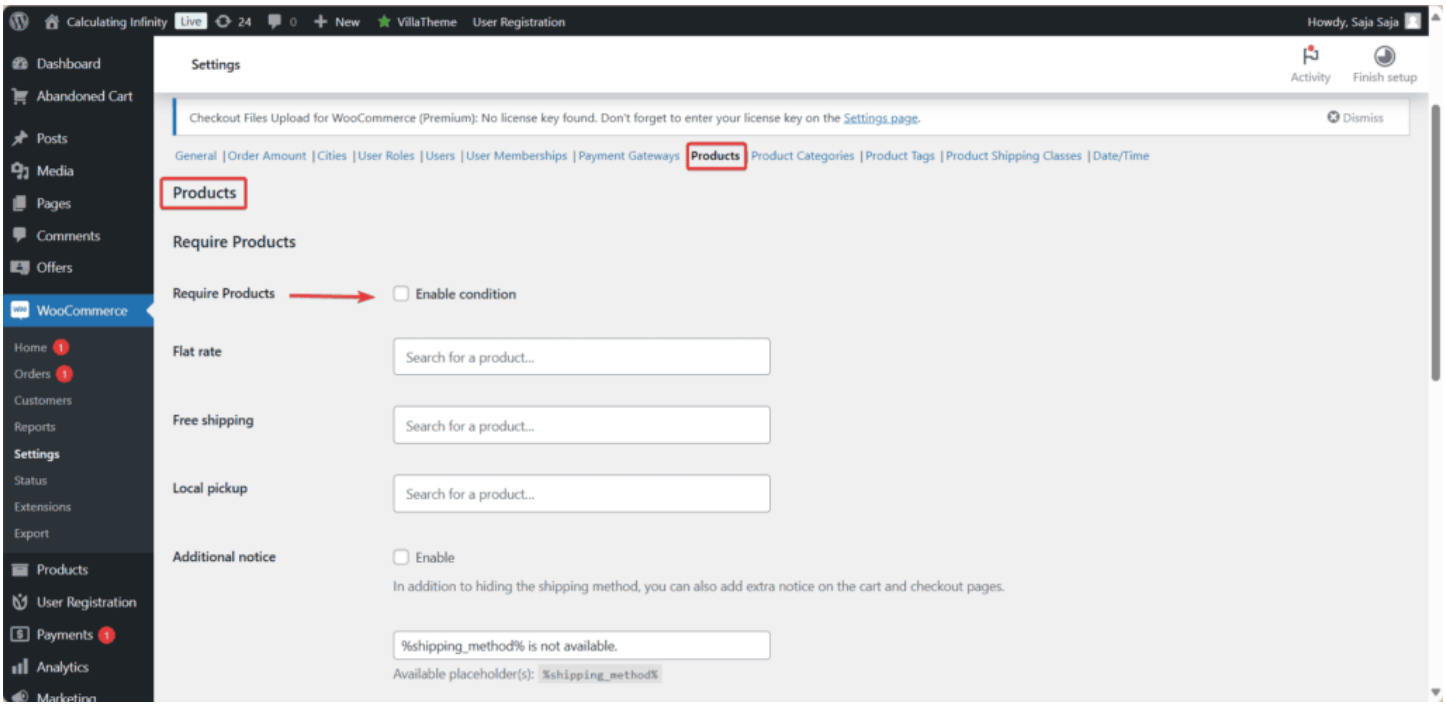

Payment Gateways

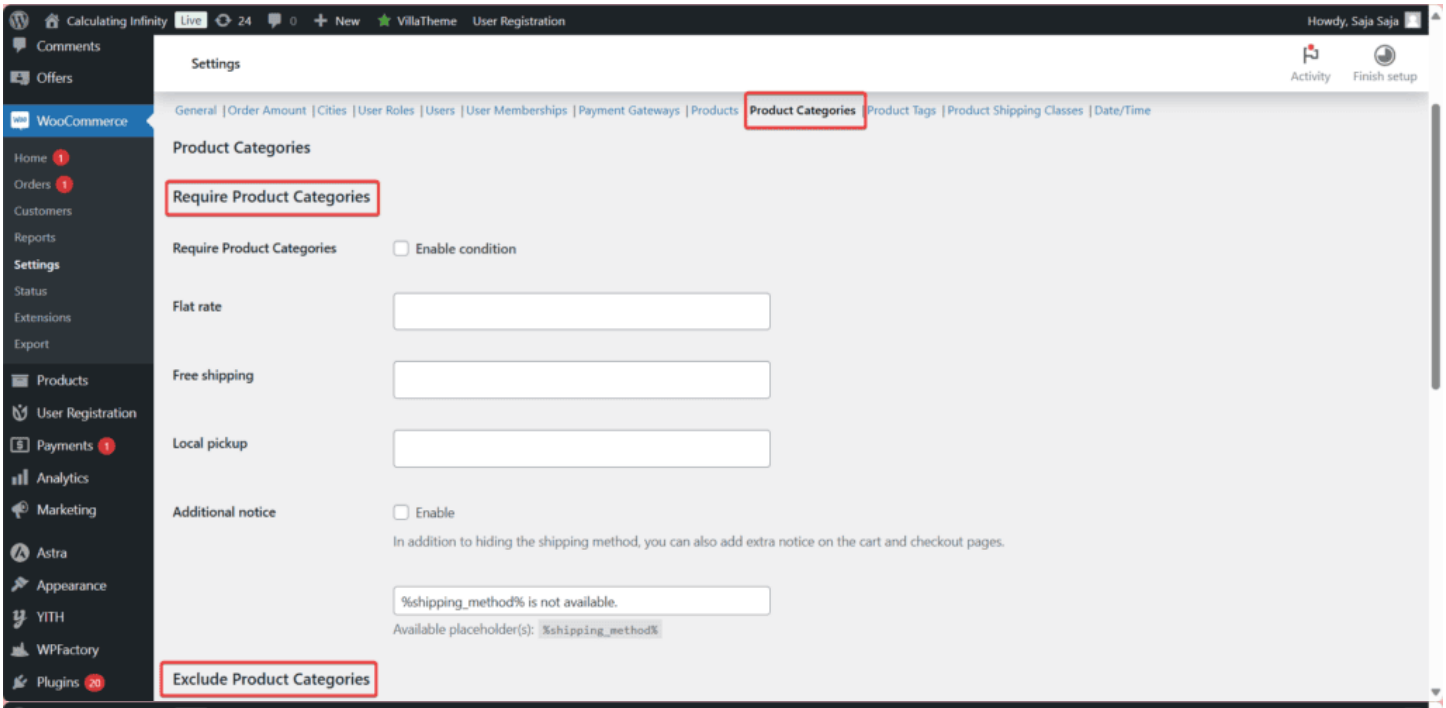

Show a method only with certain payment methods, or hide it for them. These rules are most reliable on the checkout page, where the selected gateway is known. See conditional shipping with payment gateways and excluding payment gateways.

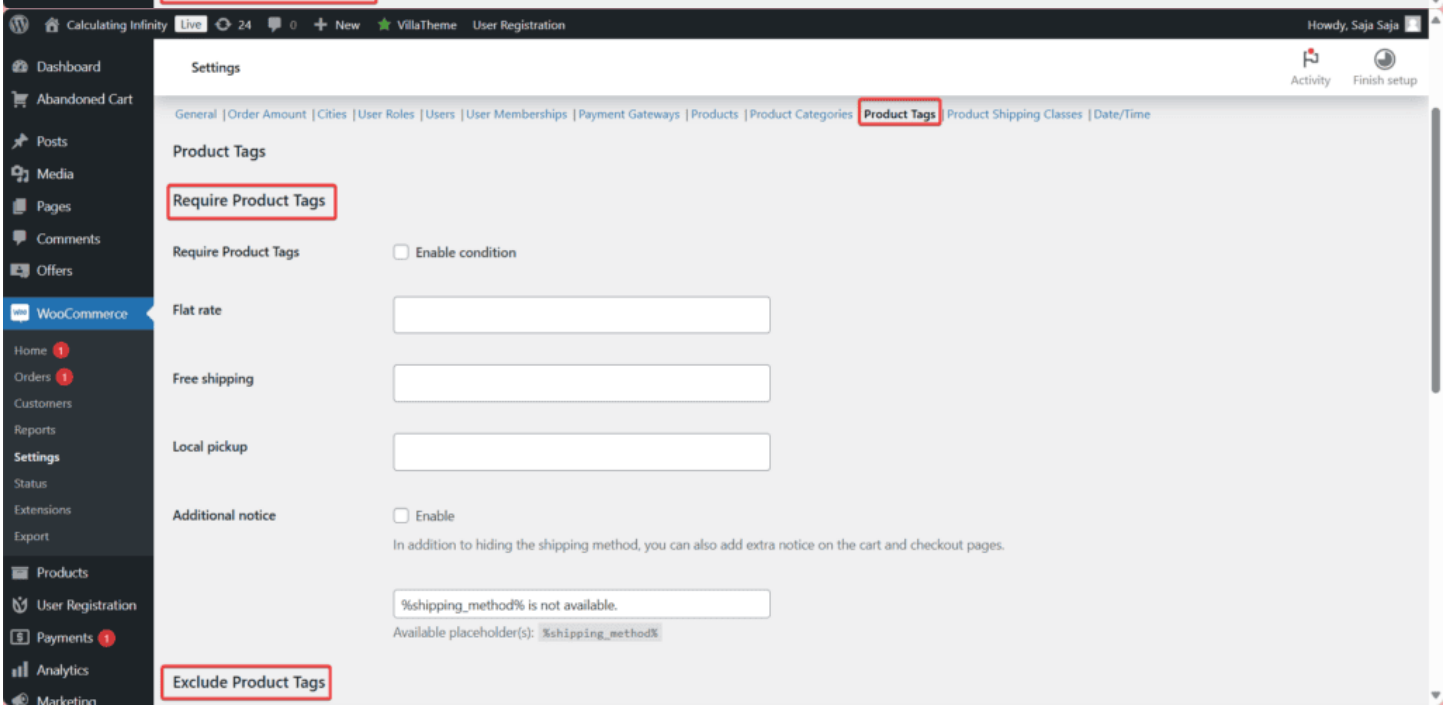

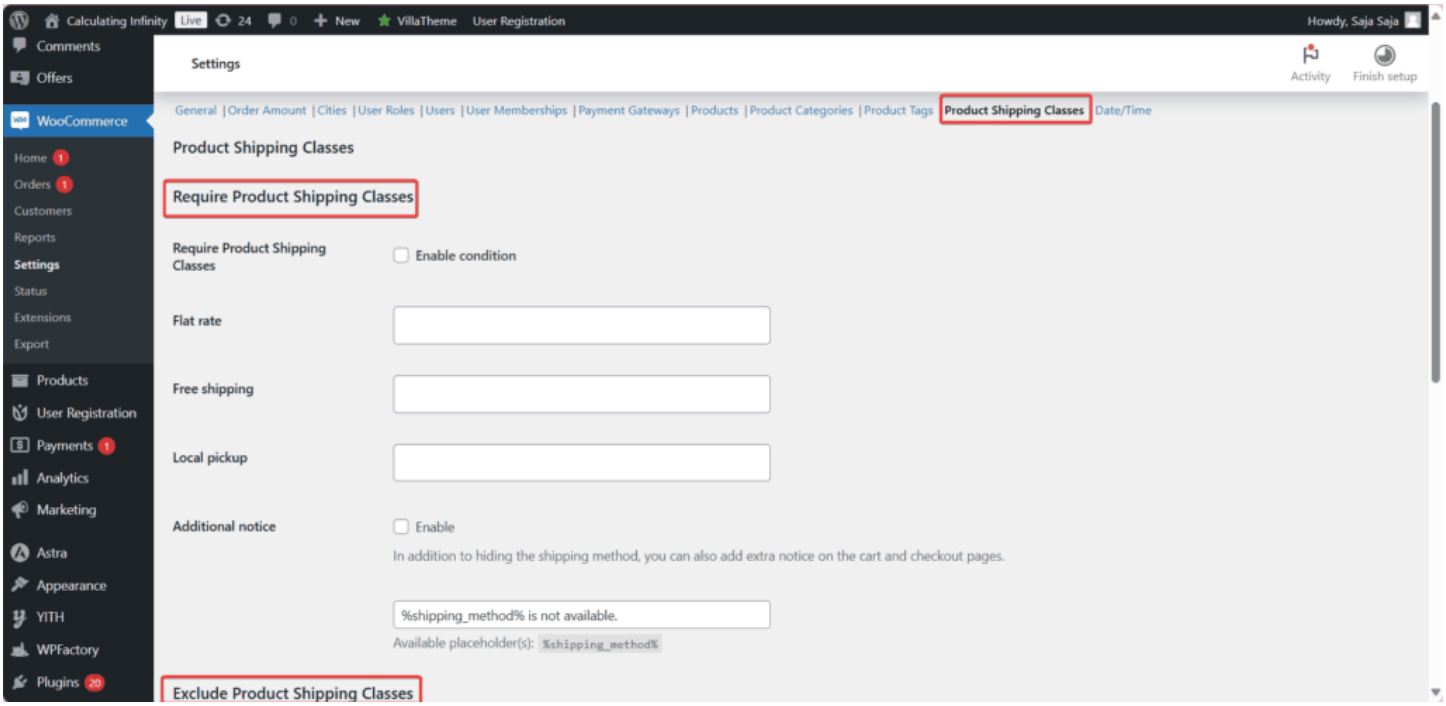

Products, Categories, Tags and Shipping Classes

Require or exclude specific products (and variations, when Add products variations is on), whole categories, tags or shipping classes, including a **No shipping class** option. See the guides for products, categories, tags and shipping classes.

Date/Time

Enable or hide a method during set hours, days or months. A range is written as `from-to` with a single hyphen between the two sides, and multiple ranges are separated with a semicolon, for example `00:00:00-14:59:59` for before 3 PM daily. See conditional shipping by date and time.

Cart and checkout notices

Each condition section has an **Additional notice** option that shows a message on the cart and checkout pages when a method is hidden. See cart and checkout notices for hidden shipping methods.

Per-instance conditions (Pro)

With **Use shipping instances** on, each shipping method instance in each zone gets its own value field. See set shipping conditions per shipping method instance.

Free vs Pro

Feature	Free	Pro
All conditions (order amount, cities, user roles, users, memberships, payment gateways, products, categories, tags, shipping classes, date/time)	Yes	Yes
General options, notices and debug log	Yes	Yes
Use shipping instances (conditions per method instance and zone)	No	Yes

FAQ

I entered a value but the method still shows. Why?

The condition is probably not enabled. Tick it under **Available Conditions** on the General section, or tick **Enable condition** in its own section, and save. See shipping conditions ignored at checkout.

How do I enter several cities?

One city per line. Commas are not treated as separators.

What happens when I use two conditions on the same method?

With **Logical operator** set to AND, the method shows only when both pass. With OR, one passing condition is enough.

Can I set a different rule for the same method in two zones?

Yes, with the Pro option **Use shipping instances**. In the free version, a rule applies to the method type in every zone.

Does Debug log every condition?

No. It currently logs only Require and Exclude Cities and Require and Exclude Date/Time.

CONDITIONAL SHIPPING

Every condition is free. Conditional Shipping for WooCommerce: Restrict Shipping Options by Anything Pro adds the Use shipping instances option, so you can set conditions per shipping method instance inside a specific zone.
