How to Install Quantity Manager: Min, Max and Step Quantities for WooCommerce

Getting Started · https://wpfactory.com/docs/install-min-max-quantity/

To install Min Max Step Quantity Limits Manager for WooCommerce, add the free version from **Plugins > Add New**, or upload the Pro ZIP after deactivating the free one. Once active, the settings are at **WPFactory > Quantity Manager**, where you switch on the minimum, maximum, step and default quantity sections you need.

Before you begin

- WooCommerce installed and active. Quantity Manager declares WooCommerce as a required plugin.
- WordPress 6.1 or later.

Install the free version

1. In your WordPress dashboard, go to **Plugins > Add New**.
2. Search for **Min Max Step Quantity Limits Manager for WooCommerce** (author: WPFactory).
3. Click **Install Now**, then **Activate**.

Install Quantity Manager Pro

1. Download the Pro ZIP from your WPFactory account.
2. If the free version is active, deactivate it first under **Plugins**. Pro refuses to activate while the free plugin is running and shows "You need to deactivate Product Quantity Control for WooCommerce."
3. Go to **Plugins > Add New > Upload Plugin**, choose the ZIP, click **Install Now**, then **Activate**.
4. Enter your license key under **WPFactory > Key Manager** so you receive updates.

Open the settings

After activation, the settings live at **WPFactory > Quantity Manager** (also reachable at **WooCommerce > Settings > Product Quantity**). The plugin itself is enabled by default, but each rule section starts switched off, so nothing changes in your store until you enable one. The sections are:

Section	What it controls
General	Decimal quantities, sold individually, add to cart validation, cart notices, initial quantity on page load, Buy all stock button
Minimum Quantity / Maximum Quantity	Smallest and largest amounts, per item or for the whole cart
Default Quantity	The quantity pre-filled when a page loads
Quantity Step	Selling in multiples, for example packs of 6
Fixed Quantity	Allowed or disallowed quantity lists
Quantity Dropdown	A dropdown instead of the number box

Section	What it controls
Total Price by Quantity / Price Unit	Price text that updates with quantity, and labels such as "per kg"
Quantity Info	Text showing the rules on product and shop pages
Styling / Admin / Advanced	Input CSS, product list columns, rounding, roles and compatibility options

Quick first setup

1. Open **Minimum Quantity**, tick **Enable Minimum quantity section**, set **All products** to your minimum and save.
2. To pre-fill a quantity, enable **Default Quantity** and set **General > Initial Quantity Options > Single product page** to **Default quantity**. See How to set a default quantity on page load.
3. For per-product values, tick **Per product** in the section, then set the number in the **Product Quantity** box on the product edit page.
4. Open a product page and try a quantity outside your rule to check the result.

Pro version features

The free version already includes store-wide rules plus per-product minimum, maximum and step. Quantity Manager Pro adds, among other things:

- Per-product default and fixed quantities, and minimum, maximum, step and default quantities by category or attribute.
- A quantity box, dropdown and price on shop and category pages.
- Selling below the minimum when stock is low, role targeting, and disabling the plugin by URL or category.

If it does not work

- **Pro will not activate:** the free version is still active. Deactivate it, then activate Pro.
- **No Quantity Manager menu:** WooCommerce is not active.

- **Nothing changed on the store:** expected until you enable a section and set a value.

FAQ

Do I need the free version to run Pro?

No. Pro is a standalone plugin and must replace the free version, not run beside it.

Where do I find a feature comparison?

See Quantity Manager: Free vs Pro features.

Why is a Per product or Per Category checkbox greyed out?

Greyed-out options are Pro. They become available once Pro is active.

QUANTITY MANAGER
