Layout and Styling Customization

How to · https://wpfactory.com/docs/layout-and-styling-customization/

Customize the layout and styling of your PDF documents

PDF Invoices & Packing Slips Generator for WooCommerce gives you granular control over how each document looks: page setup, header, footer, content, and CSS styling. All of these options live in the document's own settings section (**Doc: Invoice**) under **WPFactory > PDF Invoicing** (also reachable at **WooCommerce > Settings > PDF Invoicing**).

Page options

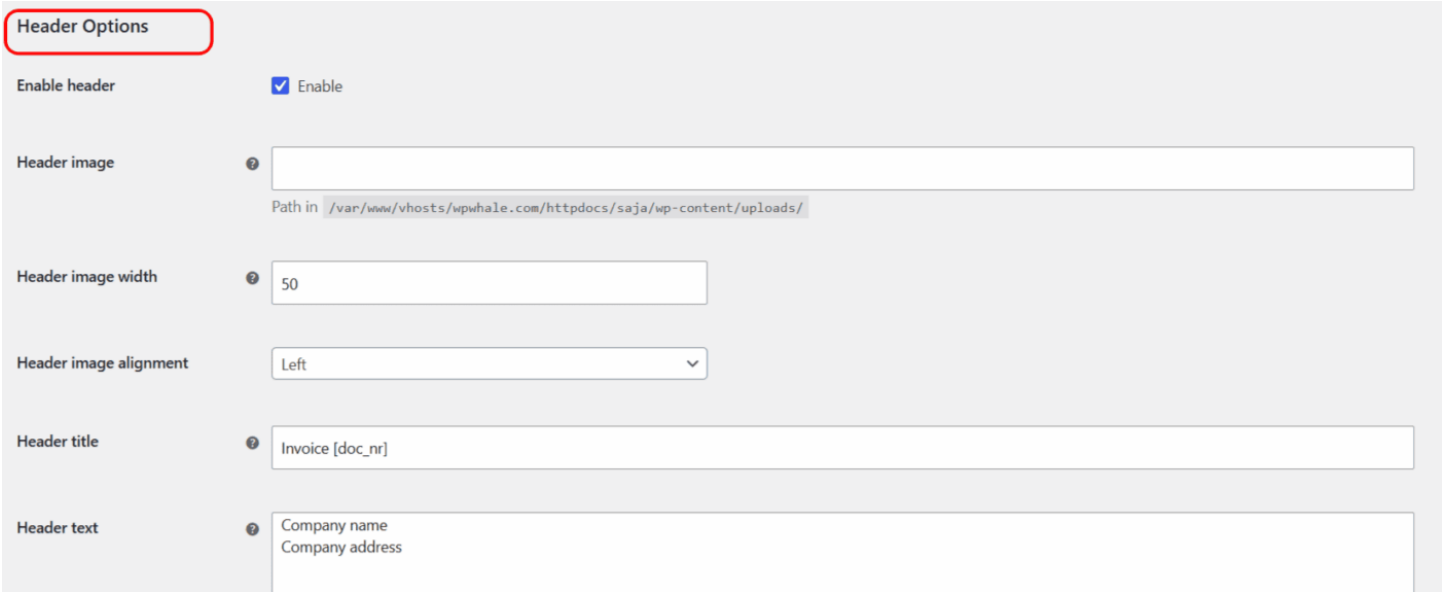

Label	Option ID (array key)	Default
Page orientation (Portrait / Landscape)	`page_orientation`	Portrait

Label	Option ID (array key)	Default
Page format (A4, Letter, Custom, ...)	`page_format`	A4
Custom width / Custom height (used only when format is Custom)	`page_format_custom_width`, `page_format_custom_height`	0
Margin: Top	`margin_top`	27
Margin: Left	`margin_left`	15
Margin: Right	`margin_right`	15
RTL	`rtl`	No
Page background image	`page_background_img`	(empty)
Page foreground image	`page_foreground_img`	(empty)

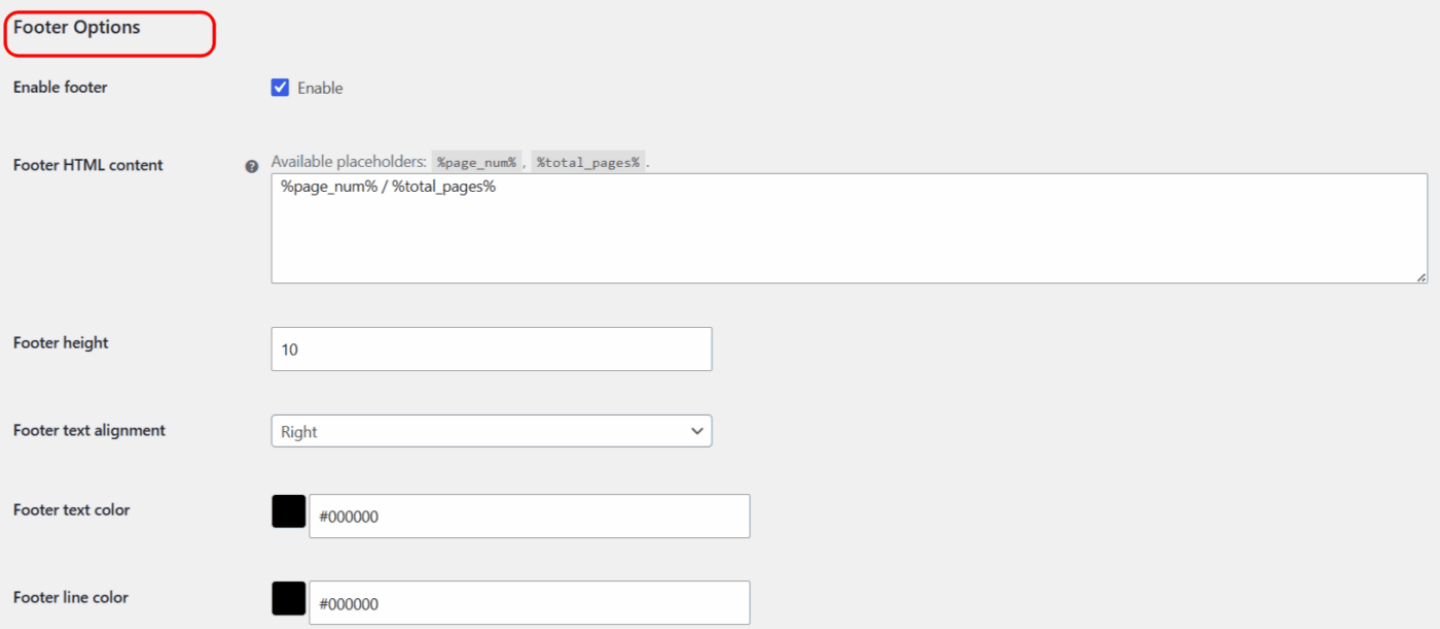

> **Note:** margins are set in millimeters for the top, left, and right only. There is no bottom-margin setting; the bottom edge is governed by the footer height and automatic page breaks. The background and foreground image fields take a file path inside the WordPress uploads folder (they accept shortcodes), not an uploaded file. See PDF Page Background and Watermark.

Header options

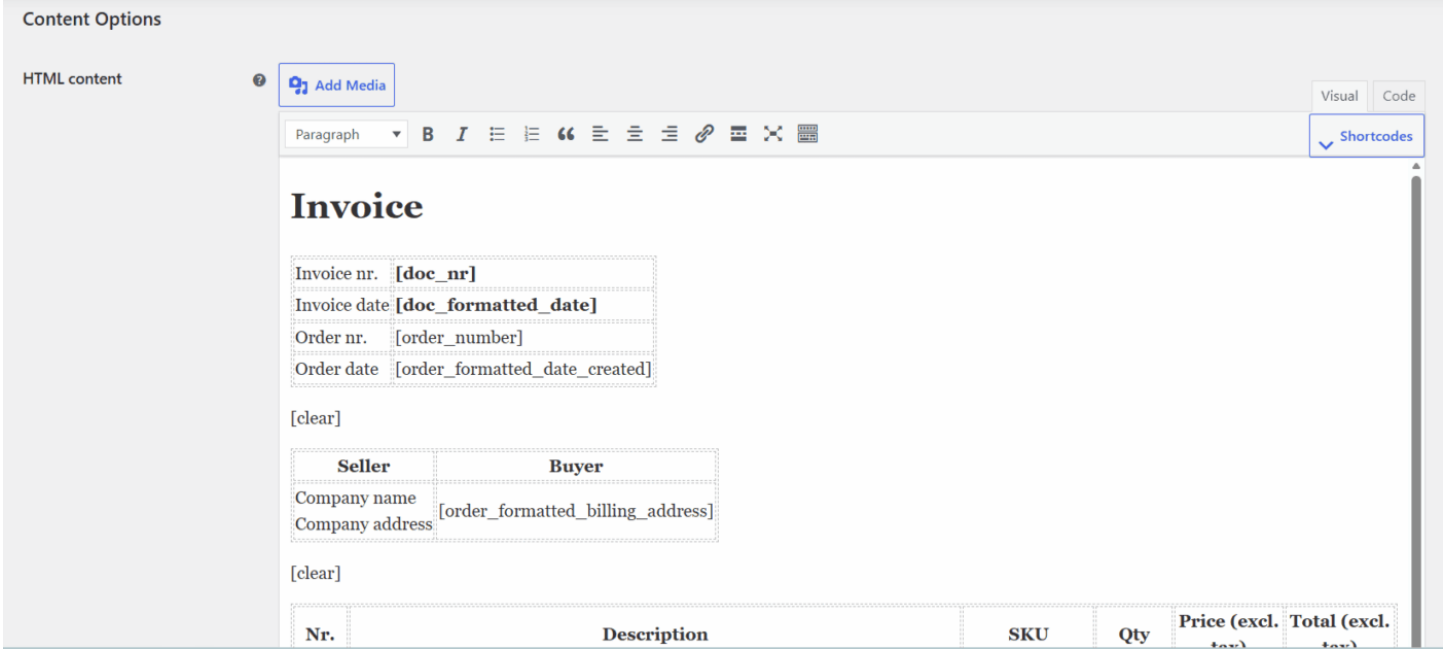

The header is where most branding lives. Verified options: **Enable header** (`enable_header`), **Header image** (`header_img` , a path in the uploads folder), **Header image width** (`header_img_width` , in mm, 0 = auto), **Header image alignment** (`header_img_palign` , Left or Right), **Header title** (`header_title`), **Header text** (`header_text`), **Header text alignment** (`header_text_palign`), **Header text color** (`header_text_color`), **Header line color** (`header_line_color`), **Header font** (`header_font_family`), and **Header font size** (`header_font_size`). See Add a Logo, Header, and Footer to PDF Invoices.

Footer options

The footer is text-based; unlike the header, it has no image option. Verified options: **Enable footer** (`enable_footer`), **Footer HTML content** (`footer_text` , which accepts shortcodes and the `%page_num%` and `%total_pages%` placeholders), **Footer height** (`footer_height`), **Footer text alignment** (`footer_text_align` , Left / Center / Right / Justify), **Footer text color** (`footer_text_color`), **Footer line color** (`footer_line_color`), **Footer font** (`footer_font_family`), and **Footer font size** (`footer_font_size`).

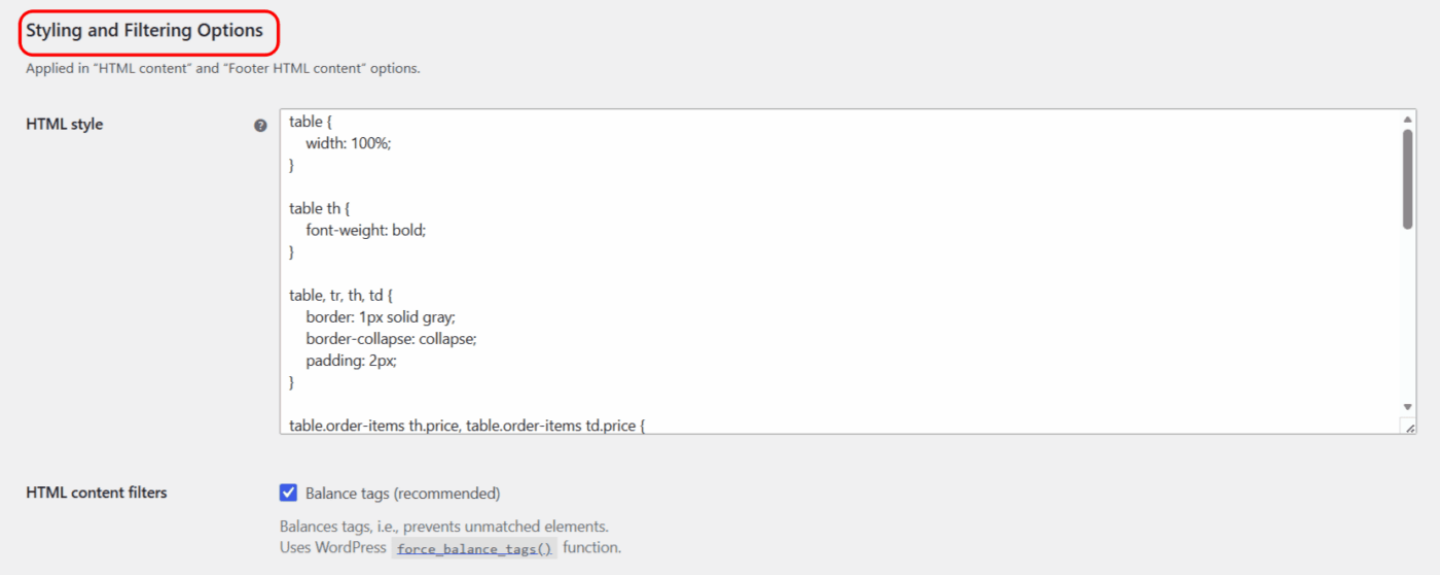

Content options

The body of the document is defined here:

- **HTML content** (`html_content`): the main template, written in HTML with shortcodes. A rich text editor with a searchable shortcode picker is provided.
- **Line color** (`line_color`): the color used by the `[line]` shortcode.
- **Font** (`font_family`) and **Font size** (`font_size`): the base body font and size.

Styling and filtering options

These settings apply to both the **HTML content** and the **Footer HTML content** fields:

- **HTML style** (`html_style`): CSS that styles the whole document.
- **Balance tags** (`html_content_force_balance_tags` , recommended, default Yes): closes unmatched HTML elements using WordPress `force_balance_tags()` .
- **Replace line breaks** (`html_content_wpautop` , default Yes): converts double line breaks into paragraphs and single breaks into `<br>` tags using WordPress `wpautop()` .

> **Tip:** to remove the line under the header or footer, set **Header line color** or **Footer line color** to `#ffffff` (white).

PDF INVOICING

Styling one document is free. PDF Invoicing Pro lets you style several document types independently.
