Quantity Rules Conflict with Bundle or Composite Products

Troubleshooting · https://wpfactory.com/docs/min-max-step-bundle-conflict/

If Min Max Step Quantity Limits Manager for WooCommerce rules block bundle or composite products, avoid setting rules on products used inside bundles, or target standalone products with per-product rules (Pro). With WPC Product Bundles, enable Sum up each product quantity within the bundle product at WPFactory > Quantity Manager > Advanced.

Common symptoms

- The bundle is blocked at add-to-cart because a child quantity fails a min/max/step rule.
- Bundle child quantities are not counted the way you expect toward a rule.
- The quantity rule applies to the bundle parent but not to its contents, or vice versa.

Fix

1. **Decide where the rule should apply.** If a rule should not govern bundled items, avoid setting it on the products used inside bundles, or use per-product rules (Pro) to target only standalone products.
2. **Use the bundle compatibility option.** In **WPFactory > Quantity Manager > Advanced**, enable **Sum up each product quantity within the bundle product** (`wpfmmsq_advance_wpc_product_bundle`) if you use WPC Product Bundles, so quantities are totalled correctly.
3. **Exclude conflicting products.** In Pro, use **Disable plugin by category** to switch the plugin off for categories that only contain bundle components.
4. **Test in isolation.** Deactivate other plugins except WooCommerce, Quantity Manager and the bundle plugin to confirm the interaction.
