Additional tips

PAYMENT GATEWAYS PER PRODUCTS

See every feature and the pricing on the Payment Gateways per Products plugin page.

View plugin →

To keep Payment Methods by Product & Country for WooCommerce rules predictable, test checkout with products from different categories and tags before going live, map which items use which gateways, make sure mixed carts keep at least one gateway or enable the Pro fallback gateway, keep the plugin updated, and re-save and clear caches after bulk changes.

- **Test before going live.** Add test products from different categories and tags to the cart and check out with each payment method to confirm the rules behave as intended.
- **Map your rules.** For larger stores, keep a simple sheet of which categories, tags or products use which gateways. It makes conflicts easy to spot, especially for mixed carts.
- **Plan for mixed carts.** If a shopper can combine items with different gateway rules, make sure at least one gateway is allowed across the combination, or enable the Pro fallback gateway so

checkout never ends with zero options.

- **Keep the plugin updated.** Updates track new WooCommerce releases and fix compatibility issues.
- **Re-save after bulk changes.** After editing many rules, save and clear caches so the storefront reflects the latest configuration.
