Price by Quantity Placeholders Reference

References · https://wpfactory.com/docs/price-by-quantity-placeholders-reference/

This reference lists the placeholders you can use in the templates and shortcodes of Price by Quantity & Bulk Quantity Discounts for WooCommerce. Placeholders are wrapped in percent signs, for example `%new_price_total%`, and are replaced at render time.

Price and discount placeholders

These are used in the **Price Display by Qty** templates and the **Qty Dropdown** label template.

Placeholder	Meaning
`%qty%`	The selected quantity.
`%qty_total%`	Total quantity (dropdown label template only).
`%old_price_single%`	Original per-unit price.
`%new_price_single%`	Discounted per-unit price.
`%old_price_total%`	Original price times quantity.
`%new_price_total%`	Discounted price times quantity.
`%discount_value%`	Discount amount as configured for the level.
`%discount_percent%`	Discount as a percentage. Add a second `%` for a literal percent sign.
`%discount_single%`	Amount saved per unit.
`%discount_total%`	Amount saved across the quantity.

Each of the four price placeholders also has tax-specific variants, formed by adding `_incl_tax` or `_excl_tax` before the closing percent sign: `%old_price_single_incl_tax%`, `%old_price_single_excl_tax%`, `%new_price_single_incl_tax%`, `%new_price_single_excl_tax%`, `%old_price_total_incl_tax%`,

`%old_price_total_excl_tax%`, `%new_price_total_incl_tax%`, and `%new_price_total_excl_tax%`.

> **Deprecated:** older templates used `%old_price%` and `%price%`. They still work but map to `%old_price_single%` and `%new_price_single%`. Use the newer names in new templates.

Product table placeholders

These are used in the `[alg_wc_product_wholesale_pricing_table]` shortcode, in attributes such as `heading_format`, `percent_row_format` and `discount_row_format`.

Placeholder	Meaning
`%level_min_qty%`	Minimum quantity for the level.
`%level_max_qty%`	Maximum quantity before the next level.
`%level_discount%`	The level's configured discount value.
`%level_discount_amount%`	Saved amount as a number.
`%level_discount_amount_price%`	Saved amount formatted as a price.
`%level_discount_percent%`	Saved percentage (2 decimals).
`%level_discount_percent_rounded%`	Saved percentage rounded to a whole number.

The price row (`price_row_format` and `total_min_qty_price_row_format`) additionally accepts the `%old_price_single%`, `%new_price_single%`, `%old_price_total%` and `%new_price_total%` placeholders and their tax variants.

Products list placeholders

In the Pro `[alg_wc_ppq_products_list]` shortcode, level column headings accept `%level_min_qty%`, `%level_discount%` and `%level_num%` (the level's position, starting at 1).
