The Product Price Table Shortcode

Shortcodes · https://wpfactory.com/docs/product-price-table-shortcode/

Payment Gateway Currency for WooCommerce ships one shortcode, `[alg_wc_pgbc_product_price_table]`. It prints a table showing a product's price in each payment gateway's currency, using the conversion rates you set on the **Convert Currency** sub-tab. It is handy for showing shoppers, up front, what a product will cost through each payment method.

Requirements

The shortcode is registered only when **Frontend info** is enabled. Go to **WPFactory > Payment Gateway Currency** (also reachable at **WooCommerce > Settings > Payment Gateway Currency**), open the **Convert Currency** sub-tab, then the **Info** section, and tick **Frontend info: Enable**. The table only lists gateways that have a conversion rate set, so configure at least one gateway currency first.

Basic use

On a single product page, the shortcode uses the current product automatically:

```
[alg_wc_pgbc_product_price_table]
```

Anywhere else, pass a product ID:

```
[alg_wc_pgbc_product_price_table product_id="123"]
```

Attributes

Attribute	Default	What it does

`product_id`	`0`	The product to price. When 0 (or omitted), the current product on a single product page is used.
`before`	`<table><tbody><tr><th>Gateway</th><th>Price</th></tr>`	HTML printed once before the rows. Use it to open the table and add a header row.
`row`	`<tr><th>%gateway_title%</th><td>%product_price%</td></tr>`	The template repeated for each gateway with a rate. Supports the placeholders below.
`after`	`</tbody></table>`	HTML printed once after the rows. Use it to close the table.

Row placeholders

Inside the `row` attribute you can use any of these placeholders:

Placeholder	Value
`%gateway_title%`	The gateway's customer-facing title.
`%gateway_admin_title%`	The gateway's admin (method) title.
`%gateway_rate%`	The conversion rate set for the gateway.
`%gateway_currency%`	The gateway's target currency code.
`%shop_currency%`	The store's base currency code.
`%product_original_price%`	The product price in the shop currency, formatted.

`%product_price%`	The product price converted to the gateway's currency, formatted.

Custom layout example

This version prints one line per gateway showing the converted price, the currency code, and the original price:

```
[alg_wc_pgbc_product_price_table
  before="<ul>"
  row="<li>%gateway_title%: %product_price% (%gateway_currency%), was
%product_original_price%</li>"
  after="</ul>"]
```

Automatic placement on product pages

You do not have to paste the shortcode at all if you use the **Single product summary** frontend info position. When Frontend info is enabled and that position is active, the plugin outputs `[alg_wc_pgbc_product_price_table]` on every product page for you. Remove that position if you would rather place the shortcode by hand.

PAYMENT GATEWAY CURRENCY FOR WOOCOMMERCE

The shortcode shows per-gateway pricing on your storefront. To offer those gateway currencies across every payment method, unlock all gateways with Payment Gateway Currency for WooCommerce Pro.
