Product Tabs Shortcodes Reference

Shortcodes · https://wpfactory.com/docs/product-tabs-shortcodes-reference/

Shortcodes reference for product tabs

Additional Custom Product Tabs for WooCommerce provides three shortcodes you can use in any tab title or content, in the standard, global, per-product and variation tabs. They let a single global tab display data that is different for each product. All three are available in the free version.

The three shortcodes

Shortcode	Outputs
`[alg_wc_pt_product_function]`	The result of a product method, for example the name, price or SKU.
`[alg_wc_pt_product_meta]`	The value of a product custom field (post meta).
`[alg_wc_pt_translate]`	Language-specific text for WPML or Polylang sites.

`[alg_wc_cpt_translate]` is a deprecated alias of `[alg_wc_pt_translate]`. It still works, but use the current name in new content.

[alg_wc_pt_product_function]

Displays the return value of a method on the current product. Requires a `name` attribute.

Attribute	Description
`name`	Required. The method to call, for example `get_name`, `get_price_html`, `get_sku`, `get_description` or `add_to_cart_url`.
`type`	Optional. Default `local`, which calls the method on the product object. Set `type="global"` to call a global PHP function instead, passing the product to it.
`product_id`	Optional. Target a specific product instead of the current one.
`before`, `after`	Optional. Text placed before or after the value, only when the value is not empty.
`on_empty`	Optional. Text to show when the value is empty.

Example: `[alg_wc_pt_product_function name="get_sku" before="SKU: "]`

[alg_wc_pt_product_meta]

Displays a product custom field value. Requires a `key` attribute. Supports the same `product_id`, `before`, `after` and `on_empty` attributes.

Example: `[alg_wc_pt_product_meta key="_my_custom_field" on_empty="Not specified"]`

[alg_wc_pt_translate]

Outputs text for the current language on multilingual sites. See the how-to on multilingual product tabs with WPML or Polylang for the two syntaxes and examples.

Where you can use them

- Standard tab titles.
- Global tab titles and content.
- Per-product tab titles and content.
- Variation tab title and content, where they resolve per variation.

PRODUCT TABS

Shortcodes are free in Product Tabs. When you need more than one global or per-product tab to hold this content, Pro removes the limit.
