General Settings: Products per Page, Positions, Template and Select Options

How to · https://wpfactory.com/docs/products-per-page/

Configure the products per page selector

The General section of the Number of Products per Page - Pagination Manager for WooCommerce plugin is where you turn the selector on, choose where it appears, style its template, and set the options shoppers can pick from. Products per Page groups these controls into four blocks: Products per Page, Position Options, Template Options, and Select Options.

Go to **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**). The General section opens by default.

Products per Page

Label	Option ID	Type	Default	Free/Pro
Products per Page (Enable plugin)	`alg_wc_products_per_page_enabled`	checkbox	yes	Free

Position Options

The **Position(s)** setting decides where the selector is rendered. You can pick more than one position. All positions are available in the free version.

Label	Option ID	Type	Default
Position(s)	`alg_products_per_page_position`	multiselect	Before shop loop
Position priority (per selected position)	`alg_wc_products_per_page_position_priorities[...]`	number	40
Custom position(s)	`alg_wc_products_per_page_position_custom`	textarea	(empty)
Widget (Enable)	`alg_wc_products_per_page_widget_enabled`	checkbox	no (Pro)

The built-in positions are: Before main content, In archive description, Before shop loop, After shop loop, After main content, Before pagination, and After pagination.

Custom position(s): list WordPress action hook names here, one per line, to hook the selector onto any theme or plugin action. This field takes hook names, not CSS selectors. To set a priority for a hook, add a vertical bar and a number, for example `your_custom_action|40`.

> **Note:** the **Widget** checkbox is a Pro feature. In the free version it is disabled. See Products per Page Pro for the widget.

Template Options

Template Options control the markup and styling of the selector. All of these are free.

Label	Option ID	Default
Template	`alg_products_per_page_text`	Products **%from% - %to%** from **%total%**. Products on page %dropdown%
Selector class	`alg_wc_products_per_page_select_class`	sortby rounded_corners_class
Selector style	`alg_wc_products_per_page_select_style`	(empty)
Before HTML	`alg_wc_products_per_page_before_html`	
After HTML	`alg_wc_products_per_page_after_html`	
Radio glue	`alg_wc_products_per_page_radio_glue`	(single space)

The **Template** field accepts these placeholders: `%from%`, `%to%`, `%total%`, `%dropdown%`, and `%radio%`. For what each one outputs, see the Products per Page template placeholders reference.

Select Options

Select Options define the choices shoppers see in the selector, plus the default value.

Label	Option ID	Default	Free/Pro
Select options	`alg_products_per_page_select_options`	10|10, 25|25, 50|50, 100|100, All|-1	Pro (read-only in Free)
Default option	`alg_products_per_page_default`	10	Free

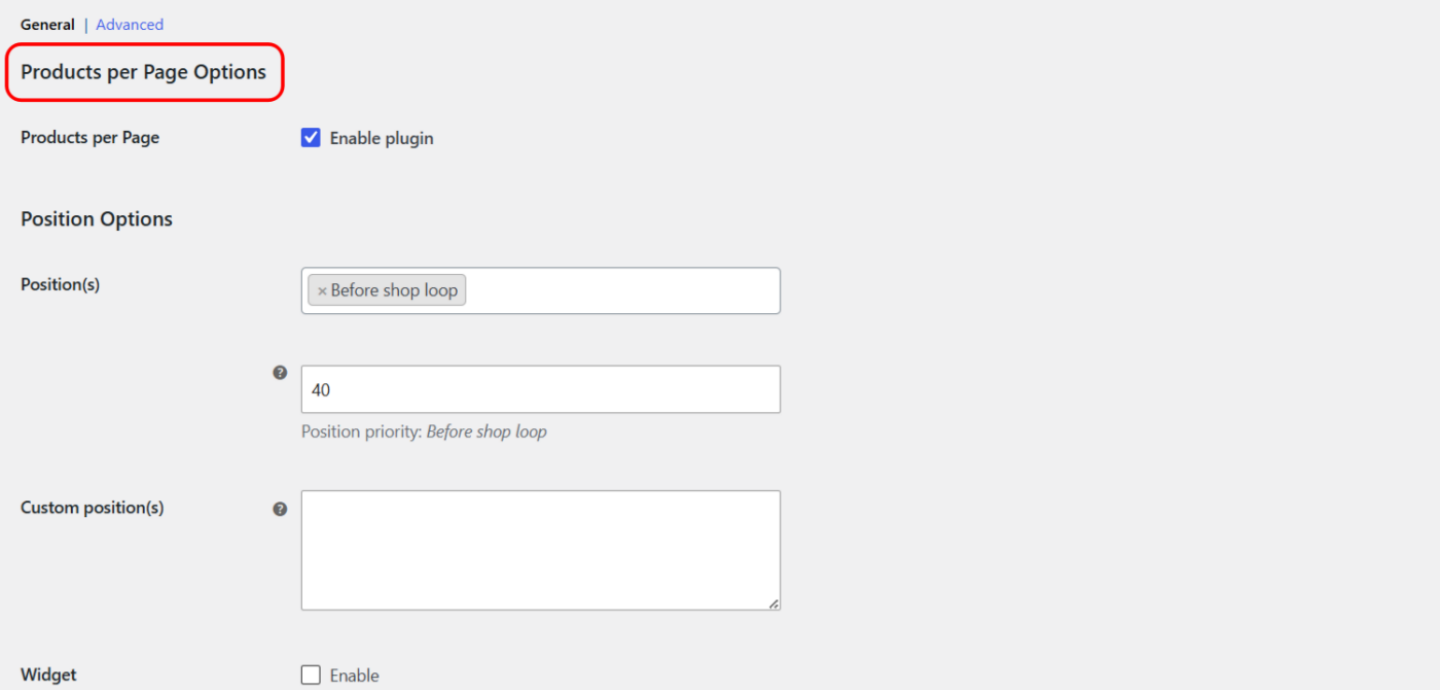

Enter one option per line in `Title|Number` format, so the title is on the left and the number of products on the right. Use `-1` for "all products", for example `All|-1`. In the free version this list is fixed to the five defaults above and the field is read-only. Editing the list requires Pro. The **Default option** value is free and takes the number of any option you want pre-selected.

Reset section settings

Each settings section has a **Reset section settings** checkbox at the bottom (option id `alg_wc_products_per_page_[section]_reset`). Check it and save to restore that section to its defaults.

Quick Setup: Add a Products per Page Selector

This quick guide gets a products per page selector onto your shop pages with the Number of Products per Page - Pagination Manager for WooCommerce plugin. For the full option reference, see the General settings guide. Products per Page settings live at **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**).

Step 1: Enable the plugin

Make sure **Products per Page** (option id `alg_wc_products_per_page_enabled`) is checked. It is on by default, so the selector works as soon as the plugin is active.

Step 2: Choose a position

Under **Position(s)**, pick where the selector appears. Two common, reliable choices are:

- **Before shop loop**: shows the selector above the product grid (this is the default).
- **After shop loop**: shows the selector below the product grid.

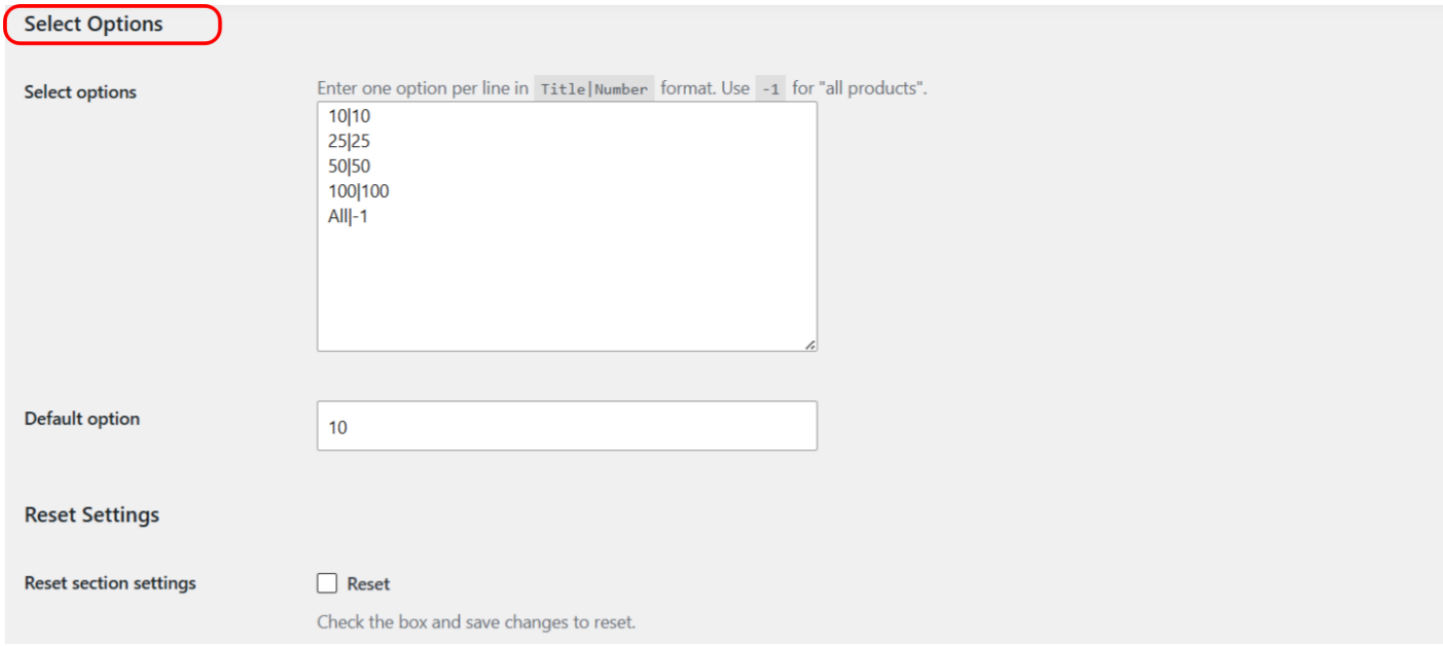

You can select more than one position at once. For a position your theme does not expose, use the **Custom position(s)** field, which takes WordPress action hook names.

Step 3: Adjust the template (optional)

The **Template** field controls the text and controls around the selector, using these placeholders:

- `%from%`: first product number on the current page.
- `%to%`: last product number on the current page.
- `%total%`: total number of products.
- `%dropdown%`: the selector as a dropdown menu.
- `%radio%`: the selector as radio buttons.

Selector class, **Selector style**, **Before HTML**, **After HTML** and **Radio glue** let you style and wrap the control. All of these are free.

Step 4: Set the options and default

The **Select options** list holds the choices shoppers see, one per line in `Title|Number` format, with `-1` meaning all products, for example `All|-1`. In the free version this list is fixed to `10`, `25`, `50`, `100` and `All`; editing it requires Products per Page Pro. The **Default option** value is free: set it to the number you want pre-selected (for example `25`). Avoid `-1` as a default on large catalogs, since loading every

product at once slows the page.

PRODUCTS PER PAGE

Positions, template, cookies and the default value are all free. Number of Products per Page - Pagination Manager for WooCommerce Pro adds an editable Select options list and a Products per Page widget.
