It empowers you to set **granular minimum and maximum requirements based on your chosen shipping methods, zones, and even individual shipping instances**. This allows you to create a highly customized shipping strategy that aligns with your fulfillment costs and business goals.

Shipping-Specific Limits:

- **Enable shipping section:** Activate this feature to define minimum and maximum limits for various aspects of orders associated with specific shipping methods, instances, or zones.

- **Flexible control:** Choose the level of granularity that best suits your needs. You can set limits for:
  - Per shipping method (e.g., minimum order value for express shipping)
  - Per shipping instance (e.g., minimum weight for a specific flat rate box)
  - Per shipping zone (e.g., minimum order quantity for a specific delivery area)
-

Advanced Shipping Customization:

- **Shipping messages:** Enable separate messages for shipping restrictions within the "Messages" section. This allows you to clearly communicate requirements to customers based on their chosen shipping option.
- **Hide unavailable methods:** Streamline the checkout process by hiding shipping methods that wouldn't be applicable due to order limits from other sections (e.g., user roles, product limits).
- **Special cases:** The plugin can handle non-standard shipping methods. Simply identify them using a split character (":") and configure limits accordingly.

Tailored Limits for Different Shipping Options:

The plugin allows you to set minimum and maximum limits for a wide range of criteria specific to each shipping option:

- Order total (sum)
- Quantity of items
- Weight
- Volume
- Dimensions (length, width, area)
- Number of products
- Product categories
- Product tags
