Remember a Shopper’s Products per Page Choice

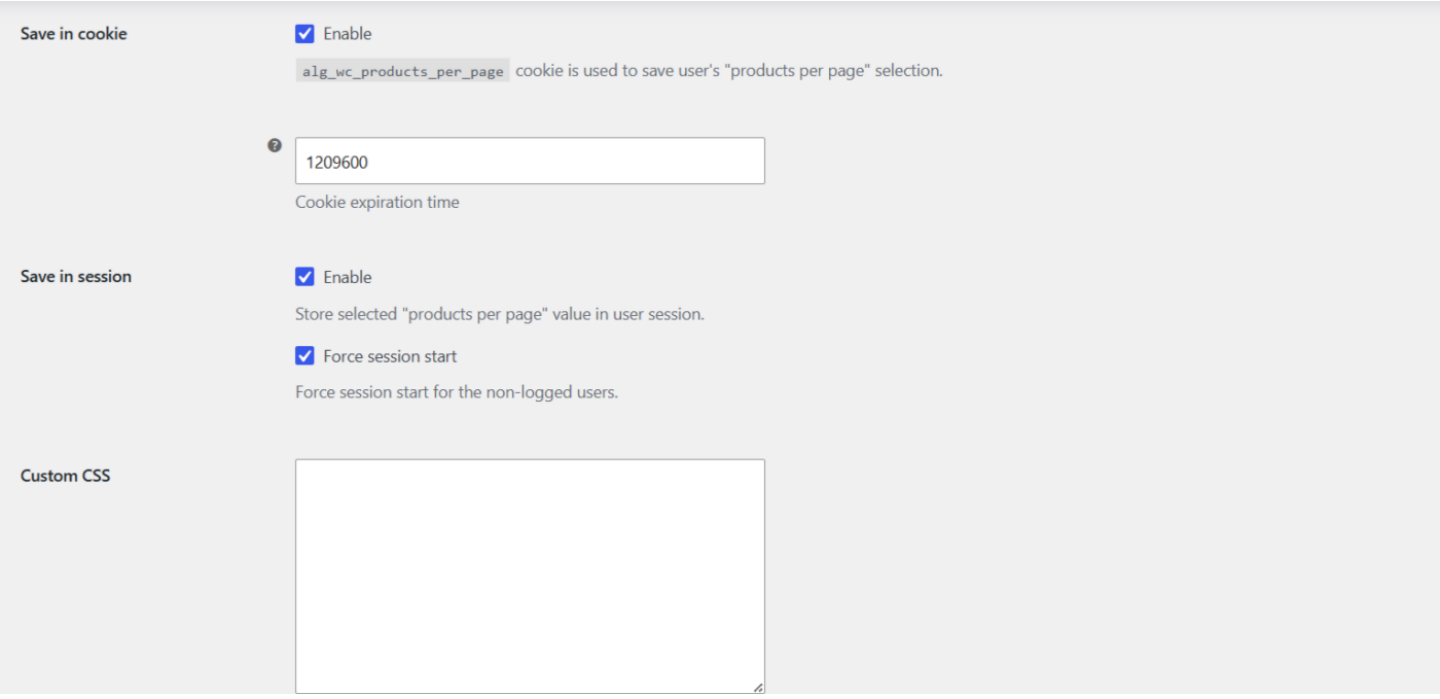

How to · https://wpfactory.com/docs/remember-products-per-page-choice/

Keep each shopper's page-size choice as they browse

Number of Products per Page - Pagination Manager for WooCommerce remembers a shopper's products per page choice in a cookie, the WooCommerce session, or both. Both are free and on by default. To adjust them, go to WPFactory > Products per Page > Advanced and set Save in cookie, Cookie expiration time, Save in session, and Force session start.

Where to set this

Go to **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**), then open the **Advanced** section.

How the value is resolved

On each request the plugin decides how many products to show in this order: a value submitted right now, then the session value, then the cookie value, and finally the Default option. So the most recent choice wins, and a stored choice is used on later visits.

Cookie and session options

Setting	Option ID	Default
Save in cookie	`alg_wc_products_per_page_cookie_enabled`	yes
Cookie expiration time (seconds)	`alg_wc_products_per_page_cookie_sec`	1209600 (14 days)
Save in session	`alg_wc_products_per_page_session_enabled`	yes
Force session start	`alg_wc_products_per_page_session_force_start`	yes

Which to use

- **Cookie:** persists across visits for as long as the expiration time you set. Raise the seconds value for a longer memory, or lower it for a shorter one.
- **Session:** lasts for the WooCommerce session. Enable **Force session start** so a session is created for non-logged-in shoppers, which is needed for the session value to stick.

> **Tip:** if a page cache serves the same HTML to everyone, the stored choice may look like it does not apply. Exclude your shop and archive pages from full-page caching, or test while logged out with caching cleared.

PRODUCTS PER PAGE

Cookie and session storage are free. Number of Products per Page - Pagination Manager for WooCommerce Pro adds an editable options list and a Products per Page widget.
