Restrict Make-Offer Button by User Role

Troubleshooting · https://wpfactory.com/docs/restrict-make-offer-by-role/

Restrict the Make an Offer button to logged-in users

To restrict the Make an offer button in Name Your Price: Make Your Own Offer for WooCommerce, go to WPFactory > Price Offers > General, set User visibility to Logged-in users only, and save. Guests then no longer see the button or the offer form. To limit the button to a specific role, use the alg_wc_po_show_offer_price_button filter.

> **Correction to an earlier version of this article:** Name Your Price includes a built-in **User visibility** option. You do not need the PHP snippet or the `[price_offering_product_button]` shortcode that a previous version suggested; that shortcode does not exist.

Use the built-in User visibility option

1. Go to **WPFactory > Price Offers** (also reachable at **WooCommerce > Settings > Price Offers**).
2. Open the **General** section.
3. Set **User visibility** (`alg_wc_po_offer_price_button_user_visibility`) to **Logged-in users only**.
4. Save changes.

Guests will no longer see the button or the offer form. Signed-in users see it as normal.

Restricting by specific role

The built-in option distinguishes between all users and logged-in users. To limit the button to a specific role (for example wholesale customers only), use the `alg_wc_po_show_offer_price_button` filter in a small snippet:

```
add_filter( 'alg_wc_po_show_offer_price_button', function ( $show, $product_id ) {
    if ( ! current_user_can( 'read' ) ) {
        return $show;
    }
    $user = wp_get_current_user();
    return in_array( 'wholesale_customer', (array) $user->roles, true ) ? $show : false;
}, 10, 2 );
```

Return `false` to hide the button. This filter is documented in the Developer hooks and filters reference.

Tip

NAME YOUR PRICE

See every feature and the pricing on the Name Your Price plugin page.

View plugin →

If you require login, add a short note near your products directing guests to create an account, so the missing button does not look like an error.
