Restrict Payment Gateways by Billing Country

How to · https://wpfactory.com/docs/restricting-gateways-country/

With Payment Methods by Product & Country for WooCommerce Pro you can make certain payment gateways appear only for customers in specific billing countries. This is a Pro feature, configured in the Countries tab.

Before you start

- WooCommerce, active.
- Payment Methods by Product & Country for WooCommerce Pro (the Countries section is Pro only).

How the country rule works

By default every gateway appears in every country. In the Countries tab you build a rule that ties a set of gateways to a set of countries: the chosen gateways appear **only** in the chosen countries, and they are removed from all other countries. Everything you do not name is left untouched.

Set it up

1. Go to **WPFactory > Payment Gateways per Products** (also reachable at **WooCommerce > Settings > Payment Gateways per Products**) and open the **Countries** tab.
2. Tick **Enable/Disable > Enable section** (`alg_wc_pgpp_countries_remove_enabled`).
3. In **Choose countries** (`alg_wc_pgpp_countries_remove_countries`), select the billing countries the rule applies to.
4. In **Choose gateways to appear only on selected countries above** (`alg_wc_pgpp_countries_remove_include_gateway`), select the gateways that should be exclusive to those countries.
5. Click **Save changes**.

Both fields are select boxes: click and pick from the list. The rule reacts to the billing country the customer enters at checkout.

Options in this tab

Setting	Option ID	Default
Enable section	`alg_wc_pgpp_countries_remove_enabled`	No
Combine conditions from other sections	`alg_wc_pgpp_countries_combine_condition`	No
Number of payment by country restrictions	`alg_wc_pgpp_countries_restriction_number`	1

- **Combine conditions from other sections:** when on, country rules are combined with your Category, Tag and Product rules rather than replacing them.
- **Number of payment by country restrictions:** raise this to add more independent country/gateway blocks, so you can define several country rules at once.

Example

- Offer a local wallet gateway only to customers in Germany: choose *Germany* and that gateway. It then appears in Germany and is hidden everywhere else.

PAYMENT GATEWAYS PER PRODUCTS

Country restrictions are a Pro feature of Payment Gateways per Products. Upgrading also unlocks per-product rules and the fallback gateway.
