How to Choose Which Products Appear in the Sales Bump Popup

How to · https://wpfactory.com/docs/sales-bump-choose-popup-products/

To choose which products appear in the popup, set upsells or cross-sells on each product's **Linked Products** tab, then pick the source in WooCommerce Sales Bump: Upsell, Cross-sell & Related Products Popup at **WPFactory > Upsell, Cross-sell & Related Products Popup Pro > General**. **Limit** and **Columns** control how many shop page suggestions show.

Which products each page shows

Page	Setting that decides	Products shown
Single product page	**Show related if upsells are not set**	The product's **Upsells**. If it has none: its related products (Yes) or no popup (No).
Shop and category pages	**What to show**	The clicked product's **Upsells**, **Cross-sells** or **Related products**

Steps

1. Go to **Products > All Products** and edit a product.
2. In **Product data > Linked Products**, add products in **Upsells** (upgrades), **Cross-sells** (add-ons), or both. Click **Update**.
3. Go to **WPFactory > Upsell, Cross-sell & Related Products Popup Pro > General**.
4. Under **Archive/Shop Page Options**, choose **What to show**: **Upsells** (default), **Cross-sells** or **Related products**.
5. Set **Limit** to the most products the shop page popup should list. `0` (default) shows all of them.
6. Set **Columns** to the number of columns in the shop page popup. Default: `4`.
7. Under **Single Product Page Options**, decide whether products without upsells fall back to related products.
8. Click **Save changes**.

Things that affect the list

- The shop page popup uses the WooCommerce products shortcode, so it follows your catalog settings: products hidden from the catalog, and out of stock products when WooCommerce hides them, are left out.
- **Limit** and **Columns** apply to shop and category pages only. On product pages, your theme's upsells or related products section sets the count and layout.
- Linked products are set one product at a time. Sales Bump has no global, category or tag rules for picking popup products.

FAQ

Can I set one list of popup products for the whole store?

No. Sales Bump reads the upsells, cross-sells or related products of the product being added. Give each product its own linked products, or use Related products to cover the whole catalog without manual work.

What does a Limit of 0 mean?

It shows every product in the chosen list. Any number above 0 caps the list at that many products.

Does Limit apply on the product page?

No. **Limit** and **Columns** only change the shop and category page popup.

Can the product page show cross-sells?

No. The product page popup uses upsells, with related products as the optional fallback.
