Shortcode Reference

Shortcodes · https://wpfactory.com/docs/shortcode-reference/

PDF Invoicing shortcode reference

PDF Invoices & Packing Slips Generator for WooCommerce provides a large set of shortcodes to insert order, item, document, and refund data into your PDF templates. Use them in the **HTML content**, **Header**, **Footer**, and **Number format** fields of a document.

> **Note:** each shortcode below uses single square brackets, for example `[order_total]`. If you set a **Shortcode prefix** in the general settings, add it to every tag (for example `[pdf_order_total]`).

Document shortcodes

Shortcode	Returns	Example
`[doc_nr]`	The document number, built from Number format.	`Invoice No: [doc_nr]`
`[doc_counter]`	The raw per-document counter value.	`[doc_counter format="%06d"]`
`[doc_formatted_date]`	The document creation date.	`Date: [doc_formatted_date datetime_format="Y-m-d"]`
`[doc_author_full_name]`	Full name of the user who created the document.	`Issued by: [doc_author_full_name]`

Order shortcodes

Shortcode	Returns	Example

`[order_number]`	The WooCommerce order number.	`Order: [order_number]`
`[order_status]`	The current order status.	`Status: [order_status]`
`[order_formatted_billing_address]`	The formatted billing address.	`[order_formatted_billing_address]`
`[order_formatted_shipping_address]`	The formatted shipping address.	`[order_formatted_shipping_address]`
`[order_total]`	The order total.	`Total: [order_total format="price"]`
`[order_total_tax]`	The total tax amount.	`Tax: [order_total_tax format="price"]`
`[order_total_tax_percent]`	The overall tax percentage.	`[order_total_tax_percent precision="0"]%`
`[order_total_in_words]`	The order total spelled out in words.	`[order_total_in_words lang="EN"]`
`[order_payment_method_title]`	The payment method title.	`Paid with: [order_payment_method_title]`
`[order_meta key="..."]`	A single order meta value.	`VAT ID: [order_meta key="_billing_eu_vat_number"]`

Many more order properties are available, including `[order_subtotal]`, `[order_total_excl_tax]`, `[order_shipping_total]`, `[order_shipping_method]`, `[order_discount]`, `[order_billing_first_name]`, `[order_billing_last_name]`, `[order_tax_totals]`, and refund totals. See the PDF Invoice Shortcode Attributes Reference for the full property list and the formatting attributes.

Item and refund shortcodes

Item shortcodes only return a value inside an `[each_item]` loop, and refund shortcodes inside an `[each_refund]` loop (see Conditional Content in PDF Invoices).

Shortcode	Returns
`[item_name]`	The line item name.
`[item_qty]`	The item quantity.
`[item_single]`	The single-unit price, excluding tax.
`[item_total]`	The line total, excluding tax.
`[item_total_tax]`	The line tax amount.
`[item_product_sku]`	The product SKU.
`[item_meta key="..."]`	A single order-item meta value.
`[refund_nr]`, `[refund_total]`, `[refund_reason]`	Refund number, total, and reason (inside `[each_refund]`).

Layout and logic shortcodes

- `[each_item]` … `[/each_item]`: loops over order line items.
- `[each_refund]` … `[/each_refund]`: loops over order refunds.
- `[if value1="..." operator="equal" value2="..."]` … `[/if]`: conditional output.
- `[translate lang="EN,DE"]` … `[/translate]`: shows text only for the matching order language.
- `[line]`, `[break]`, `[clear]`, `[paragraph]` … `[/paragraph]`, `[page_break]`: layout helpers.
- `[current_time datetime_format="Y-m-d"]`: the current date/time.
- `[checkbox]`: a checkbox input for printed forms.
