Slugs Manager Settings and Options Reference

References · https://wpfactory.com/docs/slugs-manager-settings-reference/

This reference lists every setting on the Slugs Manager: Delete Old Permalinks from WordPress Database admin page, with its stored option ID, default value, and whether it is free or Pro. All of it lives on one page at **WPFactory > Slugs Manager**.

Old Slugs (free)

The Old Slugs table lists every `_wp_old_slug` record in the database. There is no stored option here, just actions:

Action	What it does	Free/Pro
Remove selected old slugs	Deletes the `_wp_old_slug` records for the rows you tick.	Free
Remove all old slugs	Deletes every `_wp_old_slug` record in the database.	Free
Refresh list	Rescans the database and reloads the table.	Free

Automatic Clean Ups (Pro)

Setting	Option ID	Values	Default	Free/Pro
Scheduled Clean Ups	`alg_remove_old_slugs_cron_interval`	Disabled, Every minute, Hourly, Twice daily, Daily, Weekly	Disabled	Pro
Clean Up on Save Post	`alg_remove_old_slugs_on_save_post_enabled`	No, Yes	No	Pro

Regenerate Slugs (Pro)

Setting	Option ID	Default	Free/Pro
Post types to regenerate	`alg_sm_regenerate_slugs_post_types`	Post	Pro

The post-type selector is built from every searchable post type on your site, so the exact options depend on what is registered (posts, pages, attachments, products, and any custom post types). Regenerate rebuilds the current slug from the post title; there is no undo.

Extra Tools (free)

Tool	What it does	Free/Pro
Flush Rewrite Rules	Removes and recreates WordPress rewrite rules.	Free

For step-by-step guides, see the Slugs Manager documentation.

The Old Slugs table and Flush Rewrite Rules are free. Slugs Manager: Delete Old Permalinks from WordPress Database Pro adds automatic clean ups and slug regeneration.
