How to Export WooCommerce Products and Stock to Excel

How to · https://wpfactory.com/docs/stock-manager-export-stock-excel/

To export WooCommerce products and stock to Excel, go to **WPFactory > Stock Manager** in Products Stock Manager with Excel for WooCommerce and open the **Export** tab. Choose filters and extra fields, click **Search**, wait for "Job Done!", then click **Export to xlsx**.

What the export contains

Every export starts with the six columns the update needs, in the default order, so you can edit the file and upload it straight back:

Column	Heading
A	ID
B	SKU
C	REGULAR PRICE
D	SALE PRICE
E	STOCK
F	STOCK STATUS

Extra columns you select are added after column F. Simple products get one row each. Variable products get one row per available variation, with the variation ID in column A, so you can update variations individually.

How to export your products

1. Go to **WPFactory > Stock Manager** and click the **Export** tab.
2. Click **Filter & Fields to Show** to open the options.
3. Optionally narrow the export with **Keywords**, **SKU** or **Limit Results** (the number of products to export).
4. Under **TAXONOMIES TO SHOW**, tick taxonomies such as product categories, tags or attributes to add them as columns. Use **Check All** to select every taxonomy.
5. Under **FIELDS TO SHOW apart from stock, prices, id and sku**, tick extra fields such as title, description, weight, dimensions, upsell IDs or backorders.
6. Click **Search**. Products load in batches of 500. Wait until the message changes to **Job Done!**.
7. Click **Export to xlsx**, shown below the product table, to download the file. **Export to csv** and **Export to txt** are also available for other uses.

> **Note:** the Export tab reminds you to always save the generated file in xlsx format for import use. The Update tab only processes .xlsx files.

Extra fields you can add

Field	What it exports
title, description, excerpt, post_name	Product name, long and short description, and URL slug
_variation_description	The variation description (variations only)
_weight, _width, _length, _height	Shipping weight and dimensions
_downloadable, _download_limit, _download_expiry, _virtual	Download and virtual product settings
_purchase_note, _sold_individually, _backorders, _featured	Other product settings
_upsell_ids, _crosssell_ids	Linked product IDs, comma separated
_thumbnail_id, _product_image_gallery	Image URLs

These columns help you recognize products while editing. The update only reads the ID, SKU, price, stock and status columns, so changes to extra columns are not imported.

FAQ

Why does the export not include my grouped or external products?

The export writes rows for simple products and for the variations of variable products. Other product types have no row.

Can I filter the export by price?

The Regular Price field narrows the export, but in version 4.0.3 it matches the exact price you enter, whatever selector you choose. The Sale Price filter currently has no effect. Use Keywords, SKU or your spreadsheet's own filters for anything more precise.

Can I edit the title column and import it back?

No. Stock Manager updates stock quantity, stock status and prices only. Extra columns are for reference.

The export stops before "Job Done!". What should I do?

Large catalogs load in several requests. Use **Limit Results** or a Keywords filter to export in smaller groups, and ask your host to check PHP time limits if a request fails.

STOCK MANAGER

Exporting simple and variable products with extra fields is part of Products Stock Manager with Excel for WooCommerce Pro. Next, upload your edited file to update stock in bulk.
