Configuring Timepicker Fields in Custom Checkout Fields

How to · https://wpfactory.com/docs/timepicker-checkout-fields/

The Timepicker field type in Custom Checkout Fields for WooCommerce lets customers choose a time at checkout, for example a preferred delivery or pickup time. This guide covers the Timepicker options and how they interact with the shared Input options.

Before you start

1. Go to **WPFactory > Custom Checkout Fields** (also reachable at **WooCommerce > Settings > Custom Checkout Fields**).
2. Open a field tab and set **Type** to **Timepicker**. The Timepicker Type Options group then applies.

Timepicker Type Options

Label	Option ID	Default

Time format	`alg_wc_ccf_type_timepicker_format_1`	`hh:mm p`
Interval (minutes)	`alg_wc_ccf_type_timepicker_interval_1`	15
Min time	`alg_wc_ccf_type_timepicker_mintime_1`	Empty
Max time	`alg_wc_ccf_type_timepicker_maxtime_1`	Empty

Notes

- **Time format** uses the timepicker library's tokens: `hh:mm p` gives a 12-hour clock with AM/PM, while `HH:mm` gives 24-hour. This is different from the time format used by the datepicker's Timepicker addon.
- **Interval** sets the step between selectable times. With 15, customers can pick 9:00, 9:15, 9:30, and so on.
- **Min time** and **Max time** use `HH:MM`, for example `09:00` and `17:00`, to limit the selectable window.

Input options and this field

The shared **Input Options** group (Max length, Min value, Max value, Step) is aimed at Number and Range fields and does not apply to a timepicker. Two Input options are still useful here:

- **Autofocus** (`alg_wc_ccf_autofocus_1`, default No): focus the field automatically when the page loads.
- **Autocomplete** (`alg_wc_ccf_autocomplete_1`): a text field whose value becomes the input's HTML `autocomplete` attribute. Enter `off` to switch browser autocomplete off; leave it blank otherwise. It is not an on/off checkbox.

CUSTOM CHECKOUT FIELDS FOR WOOCOMMERCE

You can add one timepicker in the free version. Custom Checkout Fields for WooCommerce Pro lets you add up to 100 fields, so you can pair a date and a time field on the same checkout.
