How to Show a Custom Notice Per Coupon

Pro Features · https://wpfactory.com/docs/woocommerce-custom-coupon-notice-per-coupon/

Show a custom notice for each coupon

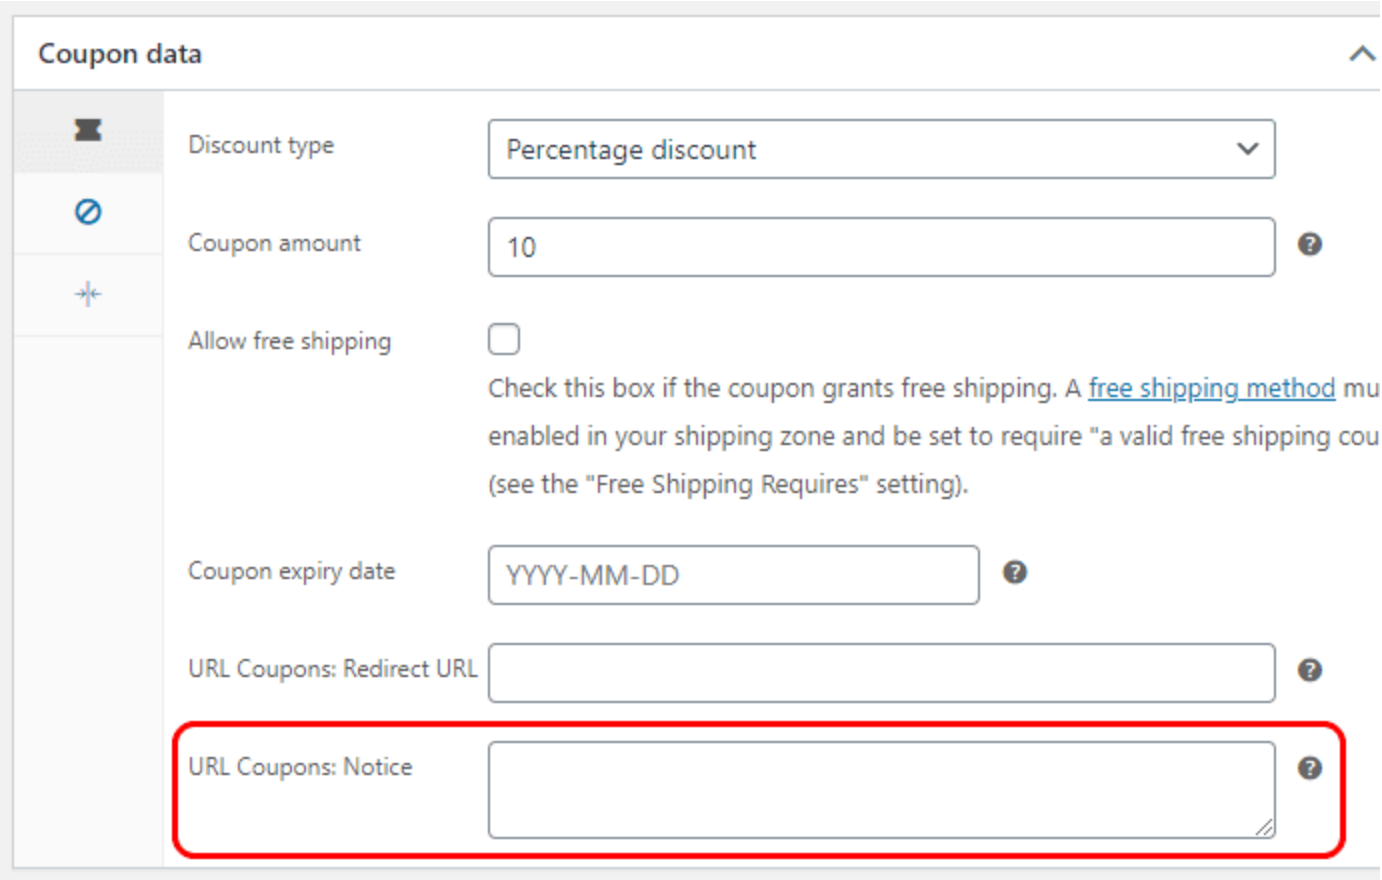

Showing a custom notice per coupon lets you replace the generic "Coupon code applied successfully" message with wording tailored to the exact coupon a customer used, so a summer-sale link can say "Enjoy 20% off, summer is on us" while a free-shipping link explains the shipping offer. This is a Pro feature of Coupons & Add to Cart by URL Links for WooCommerce.

Before you start

- WooCommerce, active.
- URL Coupons Pro (these notice options are disabled in the free version).

Two ways to customize the notice

The Pro **Notice Options** give you a global custom notice for all URL coupons, plus an optional per-coupon notice that overrides it for a single coupon. Both live on the **Notices** sub-tab.

Step-by-step setup

1. Go to **WPFactory > Coupons by URL** (also reachable at **WooCommerce > Settings > URL Coupons**).
2. Open the **Notices** sub-tab.
3. To set one message for all URL coupons, type it into **Custom notice**.
4. To set a message for one coupon, tick **Notice per coupon > Enable** and click **Save changes**. This adds a **URL Coupons: Notice** field to every coupon's edit screen.
5. Open the coupon at **Marketing > Coupons**, fill in **URL Coupons: Notice**, and update the coupon.
6. Decide how the custom notice interacts with the default one using **Notice method**, and whether it replaces existing notices with the override options below.

Options reference

Label	Option ID	Default	Free/Pro

Custom notice	`alg_wc_url_coupons_notice`	(empty)	Pro
Notice per coupon (Enable)	`alg_wc_url_coupons_notice_per_coupon`	No	Pro
Override global notice	`alg_wc_url_coupons_notice_per_coupon_override`	No	Pro
Override default notice	`alg_wc_url_coupons_notice_remove_default`	No	Pro
Notice method	`alg_wc_url_coupons_notice_method`	Add	Pro
Notice type	`alg_wc_url_coupons_notice_type`	Success	Pro
Notice glue	`alg_wc_url_coupons_notice_glue`	` `	Pro

Add versus Append: how the notice is placed

Notice method decides how your custom notice sits next to WooCommerce's own "coupon applied" message:

- **Add** (default) shows your custom notice as a separate notice of its own. The **Notice type** option (Success, Error, or Notice) sets its style. **Notice type** is only used when the method is **Add**.
- **Append** merges your custom notice into the existing coupon message, joined by the **Notice glue** string (a line break by default). **Notice glue** is only used when the method is **Append**.

Controlling which notices show

- **Override global notice**: when a coupon has its own per-coupon notice, this removes the global **Custom notice** so only the per-coupon message shows.
- **Override default notice**: removes WooCommerce's default "Coupon code applied successfully" message whenever you have a custom notice to show in its place.

Troubleshooting

- **The per-coupon field is missing.** Enable **Notice per coupon**, save, then reload the coupon edit page.
- **Both the default and custom notice appear.** Turn on **Override default notice** to drop the standard message.

- **The notice does not appear at all on a landing page.** Some pages do not render WooCommerce notices. Add the `[alg_wc_url_coupons_print_notices]` shortcode to that page's content.

URL COUPONS

This is a Pro feature of URL Coupons. If you are still on the free version, upgrading takes a couple of minutes and unlocks this along with per-coupon redirects and add-to-cart coupons.
