Bulk EAN Management with the Product Tools

How to · https://wpfactory.com/docs/woocommerce-ean-toolkit/

To manage EANs in bulk with EAN for WooCommerce, go to WPFactory > EAN (also reachable at WooCommerce > Settings > EAN) and open the Tools section. There you can generate, copy, assign from a list, delete, or copy out EANs for every product at once. The tools are free, run on all products, and cannot be undone.

Before you start

- Go to **WPFactory > EAN** (also reachable at **WooCommerce > Settings > EAN**), then open the **Tools** section.
- These tools run on all products and cannot be undone. Back up first.
- Generate, Copy, and Assign will not overwrite an EAN that a product already has. Run **Delete** first to replace existing values.

Available tools

Tool	What it does
Generate	Create a new EAN for every product. See the dedicated Generate guide for its options.
Copy from product SKU / ID / meta / attribute	Fill the EAN from an existing value on each product.
Assign from the list	Assign pre-purchased EANs from a list, one per line, optionally limited to selected product categories.
Delete	Remove the EAN from every product.
Copy to product SKU / meta / attribute	Write each product's EAN out to its SKU, a meta key, or an attribute.
Get stats	Count how many products have no EAN. Assigns and deletes nothing.

Copy from product meta

When copying from meta, set **Meta key** (option `alg_wc_ean_tool_product_copy_meta[key]`), for example `_gtin`. If the value is stored inside an array, also set the optional **Meta sub key**. This is how you migrate EANs from another plugin's field.

Assign from the list

Paste your purchased EANs into the **List** box (option `alg_wc_ean_tool_product_assign_list`), one per line. Used codes are removed from the list automatically. The **Product categories** option limits which categories are included, and **Reuse deleted** returns EANs from deleted products to the list.

Variable products

The **Variable products** option controls how every tool treats variable products: **All (variable and variations)**, **Variations only**, or **Variable only**.

EAN FOR WOOCOMMERCE

All of these tools are free. EAN for WooCommerce Pro adds 1D and 2D barcode images and PDF label printing on top of them.
