Hooks and Filters Reference

Developers · https://wpfactory.com/docs/woocommerce-order-status-hooks-filters/

This reference lists the actions and filters exposed by Additional Custom Order Status for WooCommerce, verified against the plugin source. Use them to customize behavior from your own code.

Filters

Filter	Arguments	Purpose
`wfwp_wc_order_status_options`	`$options`	Filters the per-status option boxes and fields shown on the status edit screen.
`wfwp_wc_order_status_email_content`	`$content`, `$order_id`, `$status_from`, `$status_to`, `$order`	Filters the email body before placeholders are replaced (Pro).
`wfwp_wc_order_status_wc_email`	`$use_wc_email` (bool, default true)	Return false to send status emails with the legacy direct method instead of the WooCommerce `WC_Email` classes (Pro).
`wfwp_wc_order_status_custom_sorting_status`	`$status, $data_type`	Filters each status slug as it is matched during custom sorting.
`wfwp_wc_order_status_settings`	`$value, $type, $args`	Internal gating filter used to enable the Email Options in the Pro build. Not intended for general use.

Actions

Action	Arguments	Fires when
`wfwp_wc_order_status_core_loaded`	`$core`	The core class has finished loading. Passes the core instance.
`wfwp_wc_order_status_settings_saved`	`$current_section`	The plugin's settings tab is saved. Passes the current section id.

Example: append text to every status email

```
add_filter( 'wfwp_wc_order_status_email_content', function ( $content, $order_id, $status_from, $status_to, $order ) {
    return $content . '<p>Thank you for shopping with us.</p>';
}, 10, 5 );
```

Example: run code after the plugin core loads

```
add_action( 'wfwp_wc_order_status_core_loaded', function ( $core ) {
    // $core is the WFWP_WC_Order_Status_Core instance.
} );
```

CUSTOM ORDER STATUS

See every feature and the pricing on the Custom Order Status plugin page.

View plugin →

> **Note:** per-status option values are stored as post meta on the `wfwp_wc_order_status` post type, using the option id prefixed with an underscore, for example `_text_color`. Global settings are stored as options such as `wfwp_wc_order_status_sorting`.
