Set Payment Methods from the Product Edit Page

How to · https://wpfactory.com/docs/woocommerce-payment-methods-product-edit-page/

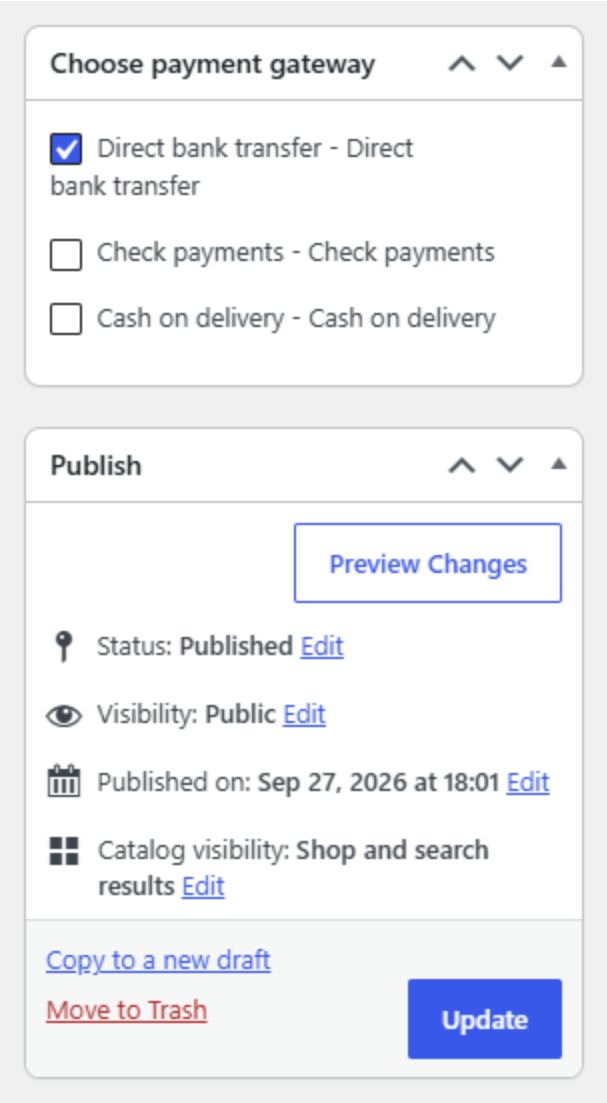

To set payment methods from the product edit page in Payment Methods by Product & Country for WooCommerce Pro, first enable the Products section at WPFactory > Payment Gateways per Products > Products. Then edit a product, tick the gateways in the Choose payment gateway box in the side column, and click Update.

Before you start

- WooCommerce, active.
- Payment Methods by Product & Country for WooCommerce Pro.
- The **Products** section enabled at **WPFactory > Payment Gateways per Products > Products** (`alg_wc_pgpp_products_section_enabled`). The box only appears when this is on.

Use the "Choose payment gateway" box

1. Open any product under **Products > All Products** and click to edit it.
2. In the side column, find the **Choose payment gateway** box. It lists every gateway enabled in WooCommerce, each with a checkbox.
3. Tick the gateways this product should be associated with, then click **Update**.

How it relates to the Products tab

Ticking a gateway here adds this product to that gateway's **Include** list in the Products settings tab, exactly as if you had added it there by hand. Unticking it removes the product from that list. In other words, the box is a per-product shortcut into the same Include rules, so a gateway you tick will show only when this product is in the cart (in combination with your other rules).

> **Note:** The box manages Include entries. To build "hide this gateway when the product is present" rules, use the **Exclude** field in the Products settings tab instead.

PAYMENT GATEWAYS PER PRODUCTS

Per-product control is a Pro feature of Payment Gateways per Products.
