Translate the Selector Text with WPML or Polylang

How to · https://wpfactory.com/docs/woocommerce-products-per-page-translate-text/

Show different selector text per language

If you run a multilingual store, the Number of Products per Page - Pagination Manager for WooCommerce plugin can show different label text depending on the active language. Products per Page provides the `[alg_wc_ppp_translate]` shortcode for this, and it reads the current language from WPML or Polylang.

Before you start

- WPML or Polylang, active and configured with your languages.
- The selector template you want to translate. This shortcode is used inside the **Template** field or wherever the selector text appears.

Two ways to use it

1. Attribute form. Provide the text for the listed languages and a fallback for all others.

```
[alg_wc_ppp_translate lang="EN,DE" lang_text="Products per page" not_lang_text="Produits par page"]
```

Here shoppers viewing English or German see "Products per page", and everyone else sees the fallback text.

2. Enclosing form. Wrap the content, and show or hide it by language. Use `lang` to target languages, or `not_lang` to target every language except those listed.

```
[alg_wc_ppp_translate lang="EN"]Products per page[/alg_wc_ppp_translate][alg_wc_ppp_translate not_lang="EN"]Productos por pagina[/alg_wc_ppp_translate]
```

Attributes

Attribute	Purpose
`lang`	One or more language codes, comma separated (for example `EN,DE`)
`not_lang`	Enclosing form only: show the content for every language except these
`lang_text`	Attribute form: the text shown for the listed languages
`not_lang_text`	Attribute form: the fallback text for other languages

Language codes are matched case-insensitively against the active language, so `EN` and `en` both match. If no multilingual plugin is active, the current language is treated as unset, so the fallback (`not_lang_text`, or the `not_lang` block) is shown.

Using it inside the template

You can place this shortcode directly in the **Template** field at **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**), alongside placeholders like `%dropdown%`. When nesting it inside the `[alg_wc_products_per_page]` shortcode's enclosed content, write the nested tag with curly braces (`{alg_wc_ppp_translate ...}`) so it is not parsed too early.

PRODUCTS PER PAGE

The translation shortcode is free. Number of Products per Page - Pagination Manager for WooCommerce Pro adds an editable options list and a Products per Page widget.
