Add the Products per Page Widget (Pro)

Pro Features · https://wpfactory.com/docs/woocommerce-products-per-page-widget/

Add the products per page selector as a widget

To add the products per page selector as a widget in Number of Products per Page - Pagination Manager for WooCommerce Pro, go to WPFactory > Products per Page, check Widget in the Position Options block, and save. Then go to Appearance > Widgets and add the Products per Page widget to a sidebar or block area.

Before you start

- WooCommerce, active.
- Number of Products per Page - Pagination Manager for WooCommerce Pro (the widget is disabled in the free version).

Enable the widget

1. Go to **WPFactory > Products per Page** (also reachable at **WooCommerce > Settings > Products per Page**).
2. In the Position Options block, check **Widget** (option id `alg_wc_products_per_page_widget_enabled`) and save.
3. Go to **Appearance > Widgets** and add the **Products per Page** widget to a sidebar or block area.

Widget options

The widget offers the same presentation controls as the Template Options block, so you can tune this instance without touching the global template.

Field	Sets
Title	The heading shown above the selector
Template	The text and placeholders (`%from%`, `%to%`, `%total%`, `%dropdown%`, `%radio%`)
Selector class	CSS class on the control
Selector style	Inline style on the control
Before HTML / After HTML	Markup around the control
Radio glue	Separator between radio buttons

Each field defaults to the matching global setting, so a widget you leave untouched looks like the rest of your selectors. The widget follows the same Form method and Select options as the global configuration.

> **Note:** the widget only outputs when products are being displayed on the current view, so it stays hidden on pages without a product loop.

PRODUCTS PER PAGE

The widget is a Pro feature of Products per Page. If you are still on the free version, upgrading takes a couple of minutes and unlocks the widget along with the editable options list.
