Replace the Quantity Input with a Quantity Dropdown

Pro Features · https://wpfactory.com/docs/woocommerce-quantity-dropdown/

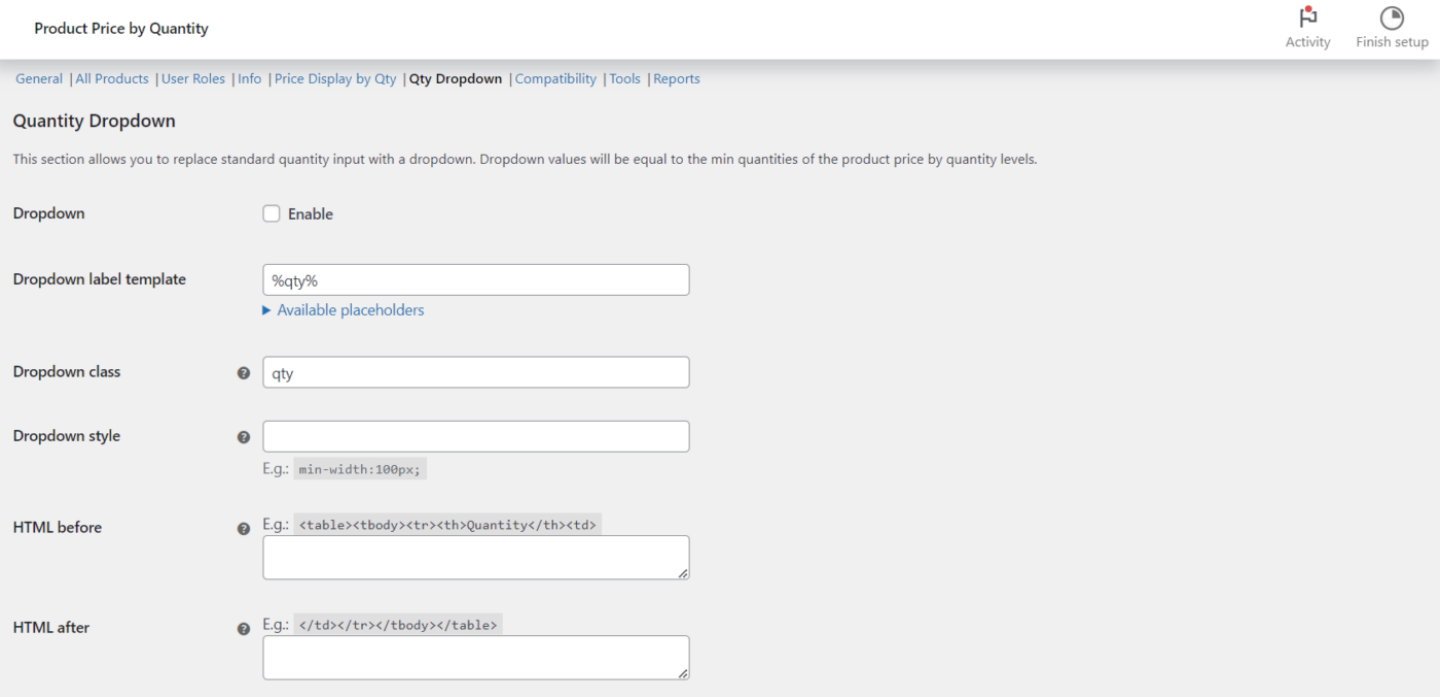

A quantity dropdown swaps the standard number input on the product page for a select box whose values match your price-by-quantity levels, so customers pick a tier instead of typing a number. This is a Pro feature of Price by Quantity & Bulk Quantity Discounts for WooCommerce, configured in the **Qty Dropdown** section.

Before you start

- WooCommerce active.
- Price by Quantity Pro (the dropdown section is disabled in the free version).
- A product with pricing levels set up, so the dropdown has quantities to list.

Step-by-step

1. Go to **WPFactory > Product Price by Quantity** (also reachable at **WooCommerce > Settings > Product Price by Quantity**).
2. Open the **Qty Dropdown** sub-tab.
3. Turn on **Dropdown**.
4. Optionally set a **Dropdown label template** so each option shows more than the raw quantity (for example a price or saving).
5. Save changes and open a product to confirm the dropdown replaces the quantity field.

Options reference

Label	Option ID	Default	Free/Pro
Dropdown (enable)	`alg_wc_wholesale_pricing_dropdown_enabled`	No	Pro
Dropdown label template	`alg_wc_wholesale_pricing_dropdown_label_template`	`%qty%`	Pro
Dropdown class	`alg_wc_wholesale_pricing_dropdown_class`	`qty`	Pro
Dropdown style	`alg_wc_wholesale_pricing_dropdown_style`	*empty*	Pro
HTML before	`alg_wc_wholesale_pricing_dropdown_before`	*empty*	Pro
HTML after	`alg_wc_wholesale_pricing_dropdown_after`	*empty*	Pro
Filter values	`alg_wc_wholesale_pricing_dropdown_filter_values`	No	Pro
Custom dropdown values	`alg_wc_wholesale_pricing_dropdown_custom_values`	*empty*	Pro

By default the dropdown lists each level's minimum quantity. Use **Custom dropdown values** to override that with your own comma-separated list, for example `1,2,3,5,10,15,20`. Turn on **Filter**

values to keep only quantities allowed by the product's step, minimum and maximum.

Label template placeholders

The **Dropdown label template** accepts `%qty%`, `%qty_total%`, `%old_price_single%`, `%old_price_total%`, `%new_price_single%`, `%new_price_total%`, `%discount_value%`, `%discount_percent%`, `%discount_single%`, `%discount_total%`, and the tax-specific variants of the price placeholders. See the placeholders reference for the full list.

Use cases

- Guide customers straight to a discounted tier by listing only wholesale quantities.
- Show the per-unit price beside each quantity, for example `%qty% pcs. - %new_price_single% each`.

Troubleshooting

- Dropdown not appearing? Confirm the product has pricing levels, or set **Custom dropdown values**.
- Real-time price not updating with the dropdown? In the **Price Display by Qty** section, turn on **Force standard quantity input**.

PRICE BY QUANTITY

This is a Pro feature of Price by Quantity. If you are still on the free version, upgrading takes a couple of minutes and unlocks the quantity dropdown along with the rest of the Pro toolkit.
